RE: Leavenworth National Fish Hatchery Report (1997–2013)

The Fish Passage Center has been marking Chinook fish from the Leavenworth National Fish Hatchery facility over the last several years as part of the Smolt Monitoring Program (SMP). For purposes of SMP, passage data are collected on both the juvenile and adult life stages. The SMP provides information for in-season management of the hydrosystem and post-season analyses to the federal, state, and tribal fishery agencies. We would like to provide an update of some of the information we developed under this study for the Chinook used from the Leavenworth National Fish Hatchery facility in 2013 and past years.

Under the Smolt Monitoring Program, information is collected on the timing, migration speed, and survival of juveniles from the hatchery to McNary Dam. Table 1 below provides estimates of minimum, median, and maximum travel times from each year's release to McNary Dam. Also provided are estimates of the 95% confidence limits around the estimated median travel time.

In addition, we are providing estimates of the 10%, 50%, and 90% passage dates of Leavenworth NFH spring Chinook juveniles at McNary Dam for each of the years of tagging (Table 2). Also, Figure 1 is provided as an illustration of how the arrival timing of the 2013 smolt release relates to last year's release, as well as the 10-year average arrival timing (2003–2012).

Figure 1. Cumulative passage timing of Leavenworth National Fish Hatchery spring Chinook to McNary Dam.

Table 3 below provides estimates of survival from release at the hatchery to McNary Dam, along with the upper and lower confidence limits on these estimates. To put in context out-migration conditions that these spring Chinook juveniles may have experienced, Figure 2 provides the total spring flow volume (April 15–June 30) for the Upper Columbia River (as measured at Priest Rapids Dam), along with the average spring spill proportions at each of Rocky Reach, Rock Island, Wanapum, and Priest Rapids dams, for each migration year.

Finally, Table 4 contains estimates of SARs for MCN-to-BOA (without jacks). These SAR estimates were taken from Chapter 4 (see Table 4.44) of the 2013 CSS Annual Report, which can be downloaded from the FPC webpage: <http://www.fpc.org/documents/CSS.html>. Figure 3 is provided to illustrate the time series of the SAR estimates over the years of available data for Leavenworth NFH spring Chinook.
