

Fish Passage Center

Weekly Report #98 - 4

April 10, 1998

2501 SW First Ave., Suite 230
 Portland, OR 97201-4752
 phone: 503/230-4582
 fax: 503/230-7559

SUMMARY OF EVENTS:

Water Supply: Precipitation for the October-April period varied from 75% at Flathead to 118% for the Klamath basin. Most of precipitation in the basin fell in the 80-100% range. Precipitation distribution for April 1-7 shows high variations with the highest precipitation in Harney/Malheur basin of 287% and lowest for the Cascade/Cowlitz Basin of 19%.

The March Final Runoff Volume Forecast reflected the February weather conditions, showing a 2 to 8 % downturn. The exception to this trend was the area from southwest Oregon to southern Idaho where volumes increased by 2 to 15%. The April Final Runoff Volume Forecast shows a decrease for almost all major sites except Grand Coulee, which increased 1%. The biggest runoff volume decreases are at Snake River sites: Dworshak from 74% to 65% and Brownlee from 88% to 82%. The decreasing trend of the runoff volume forecast resulted in an increase in the flood control elevations for major reservoirs.

The summary of the Runoff Volume Forecasts shows that this year continues to be a below average water year with most sites' runoff in the range of 80-100%. The summary of the Runoff Volumes for different sites through the January-April period is given in the following Table.

Location	Period	January 98 Final		February 98 Final		March 98 Final		April 98 Final	
		MAF	%	MAF	%	MAF	%	MAF	%
Libby	Apr-Sep	5.88	87	6.01	89	5.37	79	5.52	82
Hungry Horse	Apr-Sep	1.66	76	1.79	82	1.62	74	1.62	74
Grand Coulee	Jan-Jul	54.7	86	57.7	91	54.8	87	55.6	88
The Dalles	Jan-Jul	86.4	82	95.2	90	91.7	87	90.8	86
Lower Granite	Jan-Jul	23.0	77	27.1	91	26.4	89	25.0	84
Dworshak	Apr-Jul	2.2	81	2.3	85	2.0	74	1.75	65
Brownlee	Apr-Jul	3.34	58	5.08	88	5.25	91	4.78	82

System Storage and Streamflow: The system continues to be operated for flood control purposes. Earlier in the season some of the major

reservoirs such as Grand Coulee and Dworshak were drafted below flood control elevations for purposes of maintenance work. These operations will result in failure to refill reservoirs by April 20 to the BiOp required flood control elevations and to meet BiOp requested spring flow targets. All system operational requests of Fishery Agencies to prevent this situation earlier in the season have been rejected by the Federal Operating Agencies. Most of the major reservoirs are refilling to their end of April flood control elevations and consequently flows in the system are low.

A summary of actual elevations and Required Flood Control elevations by the end of April is given in the following table:

Reservoir	Actual Elev. [ft] as of 4/9/98	Max. Reservoir Pool [ft]	End of April Flood Control Elev. [ft]
Libby	2392.2	2459.0	NA
Hungry Horse	3510.1	3560.0	3526.7
Grand Coulee	1266.4	1290.0	1281.2
Brownlee	2066.8	2077.0	2073.5
Dworshak	1553.02	1600.0	1595.4*

*required flood control elevation for April 15.

- Libby continues to be on minimum outflow of 4 kcfs through the end of April in order to refill to the end of April Flood Control Elevation.
- Hungry Horse is projected to be on minimum outflow of about 200 cfs and continues to refill to the end of April flood control elevation.
- Grand Coulee is projected to release minimum outflows for Vernita Bar Agreement at Priest Rapids during April and to refill to the end of April Flood Control elevation.
- Brownlee is projected to refill to the end of April Flood Control Elevation. Actual outflow is in the range of 30-32 kcfs.

- Dworshak is projected to remain on minimum outflow of 1.3-1.6 kcfs through April 20 in attempt to refill to the BiOp required April 20 Flood Control Elevation.

Upper Snake reservoirs:

Currently the system is already at the end of April required storage level. The reservoirs will continue to pass inflow through the end of April. The irrigation season may begin in the third week of April, depending on the weather conditions, which will decrease outflows from Milner and consequently flows at Lower Granite.

- Jackson Lake is projected to pass inflow of 0.6 kcfs through the end of April. Currently the reservoir is 76% full
- Palisades is projected to pass inflow through the end of next week. Currently the outflow is 2.6 kcfs and the reservoir is 62% full.
- American Falls is projected to pass inflow of 12.3 kcfs by the end of next week.
- Millner flow at the lowest point of Upper Snake system is projected not to exceed 11 kcfs through the end of April.

The average weekly flows for run-of-the river projects during March 27-April 9 period is given in the following Table:

Project	March 27-April 2	April 3-9
Priest Rapids	112.6 kcfs	71.8 kcfs
McNary	182.1 kcfs	138.9 kcfs
Lower Granite	52.8 kcfs	60.7 kcfs
Bonneville	219.2 kcfs	162.6 kcfs

Spill: System Operational Request #98-9 asked for spill to begin on April 6, 1998 at the Snake River projects, coincident with the drawdown of the Snake projects to minimum operating pools. Spill was implemented as requested. Spill at Lower Granite was initially limited to 30 kcfs for

24-hours till April 10, 1998, due to restrictions placed on spill by the COE because of barge moorage concerns. The COE further limited spill at this project until April 10, 1998 for purposes related to the behavioral guidance structure construction. Spill at Lower Granite to the 120% gas cap during nighttime hours should begin on April 10, 1998.

Spill at Little Goose and Lower Monumental Dam has been provided up to the 120% total dissolved gas cap from 1800 hours to 0600 hours. Spill at Ice Harbor Dam has been provided on a 24-hour basis. However, spill has been managed at this project so TDGS does not exceed the 110% total dissolved gas limit in Oregon waters. The Oregon gas waiver went into effect on April 10, 1998 and, therefore, TDGS levels of 110% are no longer a limitation. Gas Bubble Trauma and Total Dissolved Gas Supersaturation: The COE has been managing total dissolved gas levels in the Lower Snake River to the allowable amounts under the Washington Department of Ecology waiver and at McNary Dam to the Oregon Department of Environmental Quality standard. All other projects are reporting levels of total dissolved gas below 110%. Gas Bubble Trauma monitoring was initiated at Lower Granite, Little Goose, Lower Monumental, McNary, John Day, Rock Island and Bonneville dams this past week. Few fish are being observed with rank 1 (less than 1% of an area) signs at these projects. Ice Harbor sampling was scheduled to begin on April 10, 1998.

Smolt Monitoring. Snake River Drainage. Hatchery chinook numbers increased this week in the trap collections from the lower Salmon (WTB), Imnaha, and Grande Ronde (GRN) rivers as large numbers of fish from McCall, Imnaha, and Lookingglass hatcheries, respectively, began passing those sites. At the Lewiston Snake River trap (LEW), PIT tagged chinook from Dworshak and Lookingglass hatcheries and PIT tagged steelhead from Wallowa Hatchery were present. Lower Granite Dam collections of hatchery fish this week included PIT tagged chinook from Dworshak and Rapid River hatcheries and PIT

tagged steelhead mostly from Wallowa Hatchery. Lower Granite Dam collections of wild fish this week was a mix of PIT tagged wild chinook from each of the tributaries (Salmon, Imnaha, Grande Ronde, and Clearwater rivers) above Lower Granite Dam, while PIT tagged wild steelhead were mostly from the Imnaha and Clearwater rivers.

Columbia River Drainage. This week's collections at Rock Island Dam were dominated by chinook fry (= 60 mm). The McNary Dam collections were dominated by yearling chinook. Most PIT tagged detections to date at McNary Dam have been of holdover fall chinook released above Lower Granite Dam in the Snake and Clearwater rivers last year. A PIT tagged spring chinook from the Umatilla River was detected this week at Bonneville Dam. The new sampling facility at John Day Dam went on line April 8 for post-construction evaluation. All systems performed well and the recaptured test fish were in excellent condition. Calibration of the 3-way rotational gate was done on Thursday April 9. During the system evaluation period, general monitoring of fish passage is continuing at John Day Dam.

Adult Fish Passage: At Bonneville Dam, the cumulative spring chinook count was 3,579 through April 9. This total was only 52% and 48% of the respective 1997 and 10-year average through April 9. Throughout the week, (April 2 - April 9), spring chinook counts ranged between 300 and 600 fish per day, with the higher numbers towards the end of the reporting period. The number of fish passing upstream projects has increased at all lower Columbia River projects, with 986 spring chinook past The Dalles Dam, 333 past John Day Dam and 113 past McNary Dam. As noted last week, these fish began moving up into the Snake River basin with 26 spring chinook migrating past Ice Harbor Dam. Priest Rapids Dam should begin counting adult fish next week.

Adult steelhead continue passing the projects in fairly high numbers with daily counts generally exceeding 100 per day through the past week at Lower Granite Dam. The total

count at Lower Granite Dam since March 15 was 3,311 (of which, 529 were "wild" origin). This compares with 2,880 in 1997 and 4,481 for the 10-yr average. Normally, the spring portion of the upstream steelhead run will peak in March and April.

Regarding adult fish passage facilities, the WA shore fishway at Bonneville Dam continues to operate with one of the two fish turbines. The second turbine will not be back on-line until May 30, 1998 according to the COE. All other COE projects are operating their fishways at full criteria.

Hatchery Releases. During the past two-week period (3/27-4/9) hatcheries in the Columbia River drainage above Bonneville Dam began releasing 9.2 million smolts, and during the next two-week period (4/10-4/23) these hatcheries will begin releasing another 19.2 million smolts.

Smolt Monitoring Program (SMP) site definitions: Juvenile salmonids are sampled for the SMP at 11 dams or traps. Passage values are reported here as either collection or index counts. Collection counts are expanded, if necessary, for sub-sampling effort. Index counts are further expanded to account for non-sampled flow volume. ODFW operates the Grande Ronde trap (GRN), and reports on data collected at Little Goose Dam (LGS). IDFG operates the Salmon River trap (LEW). The Nex Perce Tribe operates a trap on the Imnaha River (IMN). WDFW reports data from the collection facilities at Lower Granite Dam (LGR); Lower Monumental Dam (LMN); Rock Island Dam PH2 (RIS) and McNary Dam (MCN). NMFS samples at John Day Dam (JDA), and provides an index value based on 8 hour sampling at Bonneville PH1 (BON).

Smolt Monitoring Program (SMP) site definitions: Juvenile salmonids are sampled for the SMP at 11 dams or traps. Passage values are reported here as either collection or index counts. Collection counts are expanded, if necessary, for sub-sampling effort. Index counts are further expanded to account for non-sampled flow volume. ODFW operates the Grande Ronde trap (GRN), and reports on data collected at Little Goose Dam (LGS). IDFG operates the Salmon River trap (LEW). The Nex Perce Tribe operates a trap on the Imnaha River (IMN). WDFW reports data from the collection facilities at Lower Granite Dam (LGR); Lower Monumental Dam (LMN); Rock Island Dam PH2 (RIS) and McNary Dam (MCN). NMFS samples at John Day Dam (JDA), and provides an index value based on 8 hour sampling at Bonneville PH1 (BON).

Historic counts (pre-1996) were obtained from CRITFC and compiled by the FPC.

1996, 1997, and 1998 counts were obtained from the Corps of Engineers.

1998 totals at LMN and LGS are based on video counts accumulated through April 08.

There are no records for adult fish passage at Little Goose Dam (LGS) on April 9 prior to 1997.

Transportation Summary Report

Two-Week Summary From 3/27/98 to 4/9/98
