

## Fish Passage Center

# Weekly Report #98 - 8

May 8, 1998

2501 SW First Ave., Suite 230  
Portland, OR 97201-4752  
phone: 503/230-4582  
fax: 503/230-7559

### SUMMARY OF EVENTS:

**Water Supply:** Precipitation for the October through the end of April period varied from 77% at Flathead to 113% at Klamath basin and 120% at Harney/Malheur basin. Most of the precipitation in the basin continues to fall in the 80% to 100% range. Precipitation distribution for April 1 through 30 shows high variations, with the highest precipitation in the Harney/Malheur basin at 167% and the lowest at NW Slope Washington Cascade with 41%. The Klamath, Upper Deschutes/Crooked, Okanogan and Owyhee/Malheur basins had high precipitation, in the range of 109%-162%. Precipitation in the Columbia above Coulee was 82% of average, the Columbia above The Dalles was 89% of average and the Snake River above Ice Harbor was 102% of average.

The new May Final Runoff Volume Forecast has been issued. In general, the runoff volume forecast decreased at all major sites in the Columbia basin. The runoff volume forecast decreased in the range of 1% to 5%. The summary of results is shown in the following Table:

Location	Period	March 98 Final		April 98 Final		May 98 Final	
		MAF	%	MAF	%	MAF	%
Libby	Apr-Sep	5.37	79	5.52	82	5.38	79
Hungry Horse	Apr-Sep	1.62	74	1.62	74	1.5	69
Grand Coulee	Jan-Jul	54.8	87	55.6	88	53.2	84
The Dalles	Jan-Jul	91.7	87	90.8	86	89.1	84
Lower Granite	Jan-Jul	26.4	89	25.0	84	25	84
Dworshak	Apr-Jul	2.0	74	1.75	65	1.73	64
Brownlee	Apr-Jul	5.25	91	4.78	82	4.54	78

**System Storage and Streamflow:** The system is passing perhaps the highest flows of the season. It is expected that a decrease in flows will follow this peak through the end of the season.

A summary of actual elevations is shown in the following table:

Reservoir	Actual Elev. [ft] 5/7/98	Max. Reservoir Pool [ft]
Libby	2411.22	2459.0
Hungry Horse	3528.12	3560.0
Grand Coulee	1279.8	1290.0
Brownlee	2074.75	2077.0
Dworshak	1576.87	1600.0

- Libby continues refill, with minimum outflow of 4 kcfs. USFWS may require, for sturgeon, a pulse of flow about May 15. When the water temperature at Bonners Ferry reaches 10 degrees Celsius, outflow from Libby will be increased to full powerhouse capacity for three days.
- Hungry Horse continues at a minimum outflow of about 200 cfs, controlling the flow of 3.5 kcfs at Columbia Falls. It continues to refill to the BiOp required end of June elevation.
- Grand Coulee will continue to pass currently high inflows with projected average outflows at Priest Rapids of 165 kcfs. The project has been operating to meet elevation 1283 on May 31 for flood control, that elevation may increase with the decreased volume forecast.
- Brownlee continued a slow refill during last week and will continue passing the inflow. The average outflow during last week was about 31 kcfs and it is expected that inflows during the coming week will be in the range

of 28 to 32 kcfs. The projected outflow is not planned to exceed 32 kcfs because of the fall chinook spawning and emergence requirements below Hells Canyon Dam.

- Dworshak will continue outflows of 1.3 kcfs to meet the flow objective of 100 kcfs at Lower Granite.

#### Upper Snake reservoirs:

Water from the system began to be withdrawn more intensively for irrigation demands. The May Final Runoff Volume Forecast decreased by 2% to 5%, compared to the May Early Runoff Volumes Forecast for the Snake River Basin. The runoff volumes for the major sites remained in the range of 78% to 95% of average.

Irrigation demands increased and expected to continue to increase depending on the weather condition.

Jackson Lake is projected to pass an inflow of 2.3 kcfs by the end of next week. Currently the reservoir is 82% full.

Palisades continues to pass inflow to the end of next week. Currently, the outflow is 12.06 kcfs and the reservoir is 61% full.

American Falls will continue to pass the inflow of 12.1 kcfs through the end of next week.

Milner flow at the lowest point of the Upper Snake system is projected not to exceed 5 kcfs through the end of next week. Current outflow is 3.4 kcfs because of the irrigation withdrawal of 6.8 kcfs at Minidoka.

The weekly average flows are increasing compared to the previous week and they are peaking. The summary of average weekly flows for run of the river projects during the April 24 through May 7 period is shown in the following Table:

Project	April 24-30	May 1-7
Priest Rapids	104 kcfs	164.01 kcfs
McNary	196 kcfs	282.23 kcfs
Lower Granite	88.4 kcfs	115.97 kcfs
Bonneville	218.6 kcfs	296.77 kcfs

**Spill:** In general, spill has increased as flow increased over the past week. Spill at Lower Granite Dam over the past week has averaged 31.2 kcfs per day. Total dissolved gas below the project has remained below the gas cap. Little Goose and Lower Monumental dams had been spilling to the 120% total dissolved gas cap from 1800 hours to 0600 hours. However, the recent increases in river flow have lead to 24-hour spill at these projects. Spill at Ice Harbor Dam continues on a 24-hour basis. The daytime spill limit of 45 kcfs for adult passage concerns cannot always be met at the present flows because of limited powerhouse capacity.

Spill in the Lower Columbia River was initiated on April 20, 1998. Spill was requested from 1800 to 0600 hours at McNary and John Day dams and for 24 hours per day at The Dalles and Bonneville dams, at amounts up to the 115/120% gas cap consistent with a system-wide approach to passage management. Recent high flows have resulted in 24-hour spill at the Lower Columbia projects as well. Spill has averaged 120.4 kcfs at McNary Dam, 105.6 kcfs at John Day Dam, 129 kcfs at The Dalles Dam and 92.8 kcfs at Bonneville Dam over the past week. At the present flows it has not been possible to maintain the 75 kcfs daytime cap on spill at Bonneville Dam. Spill for fish passage is occurring at all the Mid-Columbia projects.

**Total Dissolved Gas Supersaturation and gas Bubble Trauma Monitoring:** Total dissolved gas levels are being managed to the gas waivers below Little Goose and Lower Monumental dams, and are below the waivers at the other lower Snake projects. The gas levels in the lower Columbia are being managed as close to the gas waivers as possible. However, higher flows and spills have resulted in violations in both the Snake and lower Columbia rivers on occasion. Limited data is available for the Mid-Columbia sites at this time, but levels at the sites monitored show dissolved gas levels below the waivers. Gas bubble trauma monitoring has occurred at all sites over the past week. Few fish are showing signs throughout the system, with the percentage of signs remains well below the action criteria.

**Smolt Monitoring.** *Snake River Drainage.* This week has seen flows increase about 40% in the Snake River. Operation of the Salmon River (WTB) and Snake River (LEW) traps were curtailed during parts of this week due to the higher flows. All collections in the Imnaha River (IMN) since April 23 have been with one trap. Collections of all smolts have been lower this week than last at the Imnaha River trap. Yearling chinook collections in the Grande Ronde River (GRN) trap have remained low this week, while both hatchery and wild steelhead collections have increased greatly from last week's level. This week the Snake River (LEW) trap has seen increases in both hatchery chinook and steelhead from last week's level, and little change for their wild counterparts. New in the Snake River trap collections are coho since May 1 and hatchery sockeye since May 4. The coho were released into the Clearwater River drainage at Kooskia Hatchery this year. IDFG has observed higher numbers of migrating hatchery sockeye in the traps on the exit streams of Redfish and Alturas lakes to date this year than in the past. Passage indices rose again into the 90,000 range for hatchery chinook and to a peak of 26,000 for wild chinook at Lower Granite Dam (LGR) this week. The passage index for hatchery steelhead peaked at 500,000 this week at Lower Granite Dam, with most days this week seeing the index over 300,000 fish. Lower Granite Dam passage indices increased for coho and decreased for wild steelhead this week; hatchery sockeye began arriving in the May 6 collection. Little Goose (LGS) and Lower Monumental (LMN) dams also saw a rapid increase in hatchery steelhead passage this week.

*Columbia River Drainage.* This week has seen flows increase about 50% in the mid- and lower Columbia River. Smolt passage indices have continued to increase this week at Rock Island Dam (RIS) for yearling chinook and wild and hatchery steelhead; wild sockeye passage indices have continued to remain strong. Coho released from Winthrop Hatchery in the Methow River began arriving at Rock Island Dam during the May 4 sample period. This week has seen

increasing passage indices at McNary Dam (MCN) for yearling chinook, coho, hatchery and wild steelhead, and hatchery and wild sockeye compared to last week's level. The wild sockeye passage index magnitudes at McNary Dam this week are second only to that of yearling chinook. Likewise, this week has seen increasing passage indices at John Day Dam (JDA) for yearling chinook, coho, hatchery and wild steelhead, and hatchery and wild sockeye, compared to last week's level. Passage indices at Bonneville Dam (BO1) have changed only moderately for all species except coho this week; coho passage indices rose sharply on May 3. On May 6, the passage index of each species was noticeably higher at Bonneville Dam. Between 2200 and 2400 hour on May 6, the collection of each species rose dramatically in the Bonneville Dam Powerhouse 1 trap, apparently as a result of the large increase in total discharge to over 370 kcfs after 2000 hour moving fish accumulated in the forebay.

**Adult Fish Passage:** At Bonneville Dam, the cumulative count of adult spring chinook was 30,719 through May 7. As noted in previous reports, this total is below the normal return numbers reported in 1997 and for the 10-year average (See the Cumulative Adult Passage Table). The return of 4-year old fish remains very low with the 5-year old fish making up the greater portion of this year's run. This week's daily counts were over 1200 spring chinook adults at the beginning of the week, but dropped to about 600 adults per day by week's end. The upstream passage of these adult fish at The Dalles Dam was 19,802, about 64% of the current Bonneville Dam count. The tally at McNary Dam was 11,628 through April 30 with 6,900 counted at Ice Harbor Dam (Snake River component) and 1,375 at Priest Rapids Dam (Mid-Columbia component). Other portions of the McNary Dam count will be destined for the Yakima River and Ringold Hatchery located in the Hanford Reach of the Columbia River. Adult spring chinook continued to pass Ice Harbor during the past week, generally in the 300 to 600 fish per day range.

The adult steelhead run for the 1997/98 returns to the Snake River basin is nearly completed for the year, with daily totals of about 10 fish per day. The spring total counted at Lower Granite Dam was 4,108 through May 7, 1998.

**Hatchery Releases:** Approximately 11.3 million smolts have been released during the past two-week reporting period with hatchery steelhead accounting for about 7.6 million fish, hatchery coho accounting for about 2.5 million fish, and hatchery chinook accounting for about 1.1 million fish. During that same period there were 82,300 hatchery sockeye released into Redfish Lake Creek. During the next two-week reporting period releases of yearling migrants will include 253,000 hatchery steelhead, 435,000 hatchery chinook, and 220,000 hatchery coho. During the same upcoming period, there will be approximately 2.7 million subyearling fall chinook released from Thornhollow Acclimation Pond (Umatilla River) and 3.7 million subyearling tule fall chinook released from Spring Creek Hatchery.

### Daily Average Flow and Spill (in kcfs) at Mid-Columbia Projects

The data presented in the following passage index section is preliminary and has been derived from various sources. For verification and/or origin of data, contact the operators of the Fish Passage Data System at (503) 230-4099.

Smolt indices, wild & hatchery or combined, are presented in the following order: yearling chinook (chinook 1's), subyearling chinook (chinook 0's), steelhead, coho, and sockeye. Two classes of fish counts are shown in these tables: collection counts, which account for sample rates but are not adjusted for flow; and passage indices, which are collection counts divided by the proportion of water passing through the sampling system. Collection counts may be constrained due to sampling effort or river flow. Passage indices are not population estimates, but are used to adjust collection counts for daily fluctuations in the site's or project's operations. The classes of counts presented in the report are defined below for each site. Most samples occur over a 24 hour period that spans two calendar days. In this report, the date shown corresponds with the sample end date.

## Two-Week Summary of Passage Indices

Historic counts (pre-1996) were obtained from CRITFC and compiled by the FPC.

1996, 1997, and 1998 counts were obtained from the Corps of Engineers.

1998 totals at LMN, RIS, and RRH are based on video counts accumulated through May 06.

1998 totals at LGS are based on video counts accumulated through May 05.

Adult count records at LGS have been maintained since 1993.
