

Fish Passage Center

Weekly Report #01 - 10

May 18, 2001

2501 SW First Ave., Suite 230
 Portland, OR 97201-4752
 phone: 503/230-4582
 fax: 503/230-7559

SIGNIFICANT POINTS

- **A limited spill for the fish passage program began on May 16, 2001 at 1800 hours. Although this spill for fish passage is much below the Biological Opinion measures, it will provide some protection for downstream migrants attempting to pass the Dalles and Bonneville.**
- **Although passage indices have increased slightly in the past week, the seasonal passage indices at McNary Dam are lower than expected.**
- **The Biological Opinion minimum operating pool elevation requirement is not being met at Ice Harbor because the federal operators are avoiding spill.**

SUMMARY OF EVENTS:

Water Supply:

The cumulative precipitation for May 1-15 for Columbia above Coulee was 62% of average, for Snake River above Ice Harbor 53% of average and for Columbia above The Dalles 75% of average.

The May Midmonth Runoff Volume Forecast was issued. The projected runoff volumes remained the same for the Lower Granite and The Dalles, as in the May Final Runoff Volume Forecast. The Summary of the Runoff Volume Forecasts is given in the following Table:

Site	May Final		April Final		May Final	
	Runoff Volume [KAF]	% of avg	Runoff Volume [KAF]	% of avg	Runoff Volume [KAF]	% of avg
<i>Mica (April-Sept.)</i>	9600	75	9800	77	9300	73
<i>Hungry Horse (Apr-Sep)</i>	1320	60	1300	60	1330	61
<i>Libby (April-Sept.)</i>	3700	55	3530	52	3740	55
<i>Grand Coulee (Jan-July)</i>	37900	60	37500	59	37800	60
<i>The Dalles (Jan-July)</i>	56600	53	56100	53	56500	53
<i>Brownlee (April-July)</i>	1890	33	1890	33	1950	34
<i>Dworshak (April-July)</i>	1440	53	1400	52	1440	53
<i>Lower Granite (Jan-July)</i>	14100	47	14100	47	14100	47
<i>Heise (ID) (April-July)</i>	1940	56	2030	59	2040	59
<i>Weiser (ID) (April-July)</i>	1720	31	1730	32	1780	33

Reservoir Operations: Reservoirs continue to be operated for power emergency needs and will not refill by the end of June as required by the 2000 Biological Opinion. Seasonal snowmelt was peaking during the previous week. A summary of the actual elevations and full pool elevations is shown in the following Table:

Reservoir	Actual Elev. as of May 17, 2001 [ft]	Maximum Reservoir pool [ft]
<i>Libby</i>	2394.89	2459
<i>Hungry Horse</i>	3507.97	3560
<i>Grand Coulee</i>	1247.70	1290
<i>Brownlee</i>	2077.0	2077
<i>Dworshak</i>	1556.69	1600

**as of May 16*

Libby reservoir continues at a minimum outflow of 4 kcfs. Inflows increased to the range of 10 kcfs to 20.6 kcfs for the period of May 11-17.

Hungry Horse was operated at a minimum outflow of 0.5 kcfs for the period of May 11-17. Required minimum flows of 3.5 kcfs at Columbia Falls are being met by increased local inflows. Inflows into the reservoir were fluctuating between 8.12 kcfs and 17.89 kcfs for the period of May 11-17.

Grand Coulee continued to be operated to meet system power peaking demands and to refill. The current outflows were in the range of 20.9 kcfs-55.9 kcfs for the period of May 11-17. For the same period, inflows were in the range of 88.5 kcfs-118.9 kcfs.

Brownlee reservoir was refilled to 2077 ft on May 16. The outflows at Hells Canyon Dam project were in the range of 8.56 kcfs to 15.91 kcfs for the period of May 11-17. The Brownlee inflows were in the range of 9.50 kcfs to 15.22 kcfs for the same period.

Dworshak continued to be operated on minimum outflow of 1.6 kcfs. Inflow was fluctuating from 9.9 kcfs on May 11 to 18.6 kcfs on May 17.

Upper Snake projects were slightly drafted due to irrigation demands, from 77% of capacity on May 10 to 76% of capacity on May 17. American Falls is at 84% of capacity, Palisades is at 54% of capacity and Jackson Lake is at 87 % of capacity. Delivery of 38 kaf of augmentation water commenced on May 11 and it will be finished by May 27. At the same time, major snowmelt occurred in the basin. Flow below Milner was gradually increased to 1.5 kcfs during the last week and it is planned to start gradually decreasing at rates of 100 cfs by May 27.

Flows: Flows increased in the system for the May 11-17 period due to the initiation of snowmelt. Flows below Bonneville increased from 111.9 kcfs to 175.4 kcfs for the period of May 11-17.

Flows at Priest Rapids fluctuated between 38.6 kcfs and 63.6 kcfs for the period of May 11-17.

The 1995 Biological Opinion spring flow target is 85 Kcfs at Lower Granite beginning April

10. Actual flows were in the range of 55.6 kcfs on May 12 to 91.3 kcfs on May 16. The average daily flow for the period of May 11-17 was 72.6 kcfs.

The 1995 Biological Opinion spring flow target at McNary is 220 kcfs, beginning April 20. The average daily flow for the period of May 11-17 was 123.3 kcfs, with fluctuations between 103.8 kcfs on May 13 to 147.1 kcfs on May 17.

Spill: A Lower Columbia River limited spill program was implemented beginning at 1800 hours on May 16, 2001. The total impact of the spill program is to be about 300 MW and includes spill at The Dalles and Bonneville dams. Spill at The Dalles equals approximately 30% of instantaneous flow and spill at Bonneville Dam is equal to 50 Kcfs per hour. The spill program is expected to last three weeks.

A unit outage occurred at Ice Harbor Dam on May 15th. The normal protocol is to spill the water in excess of hydraulic capacity until the unit is brought back on-line, however, in this instance the decision was made by the COE to fill the Ice Harbor pool above MOP until the unit was back in service. Coincident with this outage was an increase in Snake River flows that prevented the pool from returning to MOP without spilling at the project. Consequently, Ice Harbor remained in violation of MOP until 0300 hours on May 18th.

The FERC fish spill program continues at the Mid Columbia projects. Total dissolved gas readings at most monitors are reading in excess of 100%, but less than the waiver limits. Fish with bubbles in their lateral line have been sampled at both McNary and Rock Island dams.

Smolt Monitoring: Yearling chinook numbers continued to decrease this week at the traps on the lower Salmon (WTB), and Imnaha (IMN) rivers, while the collection at the Grande Ronde (GRN) trap increased during the beginning of the week and decreased at the end of the week. Steelhead numbers were making up most of this week's collection, increasing substantially at the Imnaha and Grande Ronde traps. The mainstem Snake River trap at Lewiston (LEW), which was ineffective in collecting yearling chinook this season, has been collecting near 250 fish/day this week. Yearling chinook passage indices at Lower Granite Dam again peaked when flows increased to near 90 Kcfs at 141,000 fish on May 15, while steelhead passage indices peaked near 388,000 on May 16. Counts of both yearling chinook and steelhead decreased after the initial increase. Passage indices of yearling chinook at Rock Island Dam decreased rapidly after flows decreased to just 34 Kcfs on May 12 and averaged only 62 fish per day after this date. At Rock Island dam steelhead passage indices continued at a level similar to the previous week. Daily yearling chinook collections at McNary Dam have fluctuated this week around 24,000 and 60,000 fish while steelhead fluctuated between 3,500 and 8,000 fish daily. John Day Dam collections of yearling chinook continued increasing steadily this week ending at 45,450, while steelhead collections remained steady. Subyearling chinook, yearling chinook, steelhead, and coho passage indices all followed an increasing trend. The greatest change in passage at Bonneville Dam was with coho, which reached a high of nearly 130,000 fish on May 17.

Adult Fish Passage – Fish counting started April 1 at most COE projects; currently all COE projects are counting adult fish passing mainstem Columbia and Snake River dams. The PUD projects on the Mid-Columbia River began counting on April 15 at Priest Rapids, Rock Island, and Rocky Reach dams with Wells Dam initiating counting on May 1. The Fish Passage Center Weekly Report will list in a Table; the adult fish counts for the week with the previous year (2000) and the 10-year averages through the same ending date so the reader can

compare passage throughout the year for the individual species.

At Bonneville Dam, adult spring chinook salmon counts averaged 2,138 per day for the week with the daily peak count of 2,957 on May 12. The total count is now 360,863 through May 17 and compares with 167,920 in 2000 and 65,597 for the 10-year average. The 2001 count is about 2.1 times and 5.5 times greater than the respective 2000 and 10-year average. At The Dalles Dam, 273,932 adult salmon have been counted through May 17. The McNary Dam count through May 17 is 220,843, with 139,512 adult spring chinook (Ice Harbor Count) continuing up the Snake River and 45,117 counted at Priest Rapids Dam. Greater than 10,500 adult spring chinook have been counted at Prosser Dam (Yakama River) with several missing days to fill in with counts. Counts from Ice Harbor, Priest Rapids, and Prosser account for about 88% of the adult spring Chinook salmon that have passed McNary Dam (excluding Ringold Hatchery returns). Up the Mid-Columbia River, about 31,326 adult spring chinook have passed Rock Island Dam with 11,406 passing Rocky Reach Dam through May 15, respectively and Wells Dam counting 7,056 through May 16. At the upper Snake River project, more than 130,700 adult spring Chinook have been tallied to date. Jack chinook count at Bonneville Dam totaled 10,558 for the season with the counts ranging between about 550 early in the week to near 300 by the end of the week. The jack count (10,558) was 2.8 times greater than the 10-year average and about 60% the record 2000 jack spring Chinook count. On the bright side, the jack total in 1999 was 8,691 and that produced most of the 2000 adult spring Chinook run of 178,000 so the adult Chinook in 2002 is on track to at least keep the trend going for the adult fish in the Columbia River.

Hatchery Releases – See the Hatchery Release Summary for the previous two-week and next two week projected releases for the Columbia River Basin above Bonneville Dam.

Snake River – Release of yearling chinook is completed for this 2001 migration season. Approximately 4.16 million spring and summer chinook were released this year and include a small number released last fall. Hatchery release of yearling fall chinook is also completed for the season, with approximately 450,000 yearling fall chinook released directly from Lyons Ferry Hatchery and 343,000 released from the Acclimation Ponds at Captain Johns, Pittsburg Landing (Snake River) and Big Canyon (Clearwater River). About 580,000 coho were released into the Clearwater River basin. Steelhead releases are on-going from many hatcheries but the bulk will be in river by the end of next week with only volitional releases remaining. About 9.83 million juvenile steelhead will be released in the Snake River basin for the 2001 migration season. A small number of earling sockeye salmon were released into Redfish Lake Creek during the spring season.

Mid-Columbia [above McNary Dam] – Volitional releases of spring chinook from the Acclimation Ponds in the Yakama River began mid-March and will continue through May. Approximately 3.3 million yearling spring chinook will be released in the Mid-Columbia River Zone for the 2001 migration season. About 241,000 sockeye salmon were released into Lake Wenatchee from net pens and into Lake Osoyoos (direct releases) during the fall prior to their migration this April through May. Release of yearling summer chinook has been completed for this season with subyearling summer chinook scheduled for release in June. About 4.3 million summer chinook are scheduled for release in the Mid-Columbia Reach. Hatchery steelhead releases continued this week with most juvenile steelhead scheduled for release by mid-May. Numbers scheduled for release will be almost normal (1.34 million) in this Reach. The Wenatchee, Entiat, Methow, Okanogan and main Columbia (Ringold Hatchery release) rivers will be planted with the “endangered” status steelhead from WDFW and USFWS hatcheries. Steelhead

from Lyons Ferry Hatchery will be released into the Walla Walla River basin, but are not considered part of the listed steelhead. The estimated coho releases is slated to be 2.1 million for the season. Coho have been released into the Methow, Wenatchee, and Yakama rivers, with additional releases still to come from the Yakama River basin. Subyearling fall chinook releases will be primarily from the lower section of the Reach, i.e., Priest Rapids, Ringold, and Yakama Rivers. The estimated release of 12.2 million subyearling fall chinook is nearly equal to the year 2000 production and close to the previous seven years’ annual production.

Lower Columbia [McNary Dam to above Bonneville Dam]– Yearling spring chinook from State, Federal, and Tribal facilities are completed for the year. Spring chinook have been released in the Umatilla, Klickitat, Deschutes, Hood, Wind, and Little White Salmon rivers to date. The estimated total of hatchery spring chinook is 5.9 million in this river zone; about 500,000 subyearling spring chinook have been released into the White Salmon River and another 160,000 into the upper Klickitat River. About 10.6 million subyearling tule fall chinook were released from Spring Creek National Fish Hatchery this season. Yearling releases of “bright” fall chinook were made in March and April in the Umatilla River; the remaining fall chinook release groups will be subyearling fish liberated in late May or June. Normal production of subyearling fall chinook generally ranges between 8-10 million annually. All coho salmon have been released in the Umatilla River and Little White Salmon River basins with most coho in the Klickitat released for the 2001 migration. About 6.6 million coho salmon will be released in this reach for the 2001 season. Steelhead have been released in the Umatilla River with the Little White Salmon, Klickitat, and Hood River basins receiving steelhead in late April through early to mid May.

*The total, #days and average do not include the current day's data. *See sampling comments. [http://www.fpc.org/current daily/smpcomments.htm](http://www.fpc.org/current%20daily/smpcomments.htm). This means that one or more of the sites on this date had an incomplete or biased sample.

These data are preliminary and have been derived from various sources. For verification and/or origin of these data, contact the operators of the Fish Passage Data System at (503) 230-4099.

Smolt indices, clipped & unclipped or combined, are presented in the following order: yearling chinook (chinook 1's,) subyearling chinook (chinook 0's), steelhead, coho, and sockeye. Two classes of fish counts are shown in these tables: collection counts, which account for sample rates but are not adjusted for flow; and passage indices, which are collection counts divided by the proportion of water passing through the sampled powerhouse. Passage indices are not population estimates, but are used to adjust collection counts for daily fluctuations in the site's or project's operations. The classes of counts presented in the report are defined below for each site. Most samples occur over a 24-hr period that spans two calendar days. In this report, the date shown corresponds with the sample end date.

Definitions for Smolt Index Counts

WTB (Collection) = Salmon River Trap at Whitebird : Collection Counts

IMN (Collection) = Imnaha River Trap : Collection Counts

GRN (Collection) = Grande Ronde River Trap : Collection Counts

LEW (Collection) = Snake River Trap at Lewiston : Collection Counts

LGR (Index) = Lower Granite Dam Bypass Collection System : Passage Index Counts

Passage Index = Collection Counts / {Powerhouse Flow / (Powerhouse Flow + Spill)}

LGS (Index) = Little Goose Bypass Collection System : Passage Index Counts

Passage Index = Collection Counts / {Powerhouse Flow / (Powerhouse Flow + Spill)}

LMN (Index) = Lower Monumental Dam Bypass Collection System : Passage Index Counts

Passage Index = Collection Counts / {Powerhouse Flow / (Powerhouse Flow + Spill)}

RIS (Index) = Rock Island Dam Second Powerhouse Bypass Trap : Passage Index Counts

Passage Index = Collection Counts / {Powerhouse 2 Flow / (Powerhouse 1 & 2 Flow + Spill)}

MCN (Index) = McNary Dam Bypass Collection System : Passage Index Counts

Passage Index = Collection Counts / {Powerhouse Flow / (Powerhouse Flow + Spill)}

JDA (Index) = John Day Dam Bypass Collection System : Passage Index Counts

Passage Index = Collection Counts / {Powerhouse Flow / (Powerhouse Flow + Spill)}

BO2 (Index) = Bonneville Dam Second Powerhouse Bypass Collection System : Passage Index Counts

Passage Index = Collection Counts / {Powerhouse 2 Flow / (Powerhouse 1 & 2 Flow + Spill)}

BO1 (Index) = Bonneville Dam First Powerhouse Bypass Collection System : Passage Index Counts

Passage Index = Collection Counts / {Powerhouse 1 Flow / (Powerhouse 1 & 2 Flow + Spill)}

JDA and BO2 data collected for the FPC by Pacific States Marine Fisheries Commission.

RIS data collected for the FPC by Chelan Co. PUD/Washington Dept. of Fish and Wildlife.

LGR, LMN, and MCN data collected for the FPC by Washington Dept. of Fish and Wildlife.

LGS and GRN data collected for the FPC by Oregon Dept. of Fish and Wildlife.

IMN data collected for the FPC by the Nez Perce Tribe.

LGR is through 5/16. RIS, RRH are through 5/15 and the numbers (wild steelhead not available) are from Chelan CO P
PRD is through 5/16 and the numbers are from Grant CO PUD.

WEL is through 5/16 - the numbers up to 5/9 are from the COE and from 5/10 to 5/16 are directly from Wells Dam.

LGR numbers for 5/12 and 5/15 are incorrect on the COE's site: the corrected numbers come directly from LGR.

These numbers were collected from the COE's Running Sums text files.

Wild steelhead numbers are included in the total.

**PRD is not reporting Wild Steelhead numbers.

Historic counts (pre-1996) were obtained from CRITFC and compiled by the FPC.

Historic counts 1997 to present were obtained from the Corps of Engineers.
