

Fish Passage Center

Weekly Report #02 - 19

July 19, 2002

2501 SW First Ave., Suite 230
 Portland, OR 97201-4752
 phone: 503/230-4582
 fax: 503/230-7559

SUMMARY OF EVENTS:

- Storage reservoirs are currently at or near full.
- The Dworshak reservoir has begun to draft to augment flows in the lower Snake River, releasing a daily average of 13.7 Kcfs over the last week.
- The BiOp summer flow objectives are 51 Kcfs at Lower Granite and 200 Kcfs at McNary. To date, summer flows have averaged 58.7 Kcfs at Lower Granite and 258.7 Kcfs at McNary; therefore, flow objectives are being met on a seasonal basis at both projects. Weekly average flows between 7-12-02 and 7-18-02 at Lower Granite and McNary were 38.7 and 245.1 kcfs; therefore, flow objectives are not being met on a weekly basis at Lower Granite.
- Combined storage in the Upper Snake River System is at 46% of capacity.

Water: Water Year 2002 continues to be approximately average in terms of cumulative precipitation. Weekly precipitation totals have been updated through the 9th of July (Table 1). Precipitation throughout the beginning of July has ranged between 13% and 169% of average within the Columbia Basin.

Table 1. Summary of July precipitation and cumulative October through July precipitation with respect to average (1971-2000), at select locations within the Columbia and Snake River Basins.

Location	July 2002		Cumulative 10/1/01 – 7/9/02	
	Observed (inches)	% Avg	Observed (inches)	% Avg
Columbia Above Coulee	0.84	163	21.75	103
Snake R. Above Ice Harbor	0.07	27	13.52	88
Columbia Above The Dalles	0.45	124	19.69	98
Kootenai	0.93	169	20.48	95
Clark Fork	0.34	98	15.31	105
Flathead	0.62	135	20.72	107
Pend Oreille/Spokane	0.66	166	31.63	114
Central Washington	0.13	118	7.37	91
Snake R. Plain	0.02	13	6.85	70
Clearwater	0.30	71	28.98	106
SW Washington Cascades/Cowlitz	0.28	70	71.65	109
Willamette Valley	0.08	34	56.03	100

Flows within the Columbia Basin have been decreasing. Storage reservoirs along the Columbia and Snake Rivers are generally at or near full and operators are passing inflows.

Operations at the Grand Coulee Reservoir have remained steady over the past week; reservoir elevations throughout the week have ranged between 1288.2 and 1289.2 feet. Total outflows have been approximately equivalent to inflows at Grand Coulee over the last week (7-12-02 to 7-18-02) and have averaged approximately 173.4 Kcfs.

The Libby reservoir has also remained steady over the past week (7-12-02 to 7-18-02); reservoir elevations have ranged from 2458.1 to 2458.6 feet. Outflows have varied between 28.6 and 22.0 Kcfs over the week. Over the last week, inflows to Libby have been decreasing, beginning the week at 31.9 Kcfs and ending at 22.5 Kcfs. Throughout most of the week, inflows were high enough to force operators to spill between 1.3 and 4.8 Kcfs. Currently (7-18-02), Libby is not spilling reservoir water.

The Dworshak reservoir has begun to draft. Over the last week, total outflows at Dworshak have increased to 13.7 Kcfs (7-12-02 to 7-18-02) to supplement flows and temperatures at Lower Granite. Operations at Dworshak have included spilling 4.1 Kcfs of reservoir water to achieve the 13.7 Kcfs total outflow. Currently (midnight, 7-18-02) Dworshak is at an elevation of 1592.2 feet.

Over the past week, the Brownlee reservoir has drafted 1.5 feet of reservoir space, beginning the week at 2073.2 (7-12-02) and ending the week at 2071.7 feet (7-17-02). During the week, outflows have varied between 7.3 and 11.7 Kcfs.

Operations at the Hungry Horse Reservoir have generally remained steady over the past week; reservoir elevations throughout the week have ranged between 3559.6 and 3560.0 feet. Total outflows have been approximately equivalent to inflows at Hungry Horse over the last week (7-12-02 to 7-18-02) and have averaged approximately 4.8 Kcfs.

The BiOp summer flow objective season began at Lower Granite on 6-21-02 and at McNary on 7-1-02. The summer objectives are 51 Kcfs at Lower Granite and 200 Kcfs at McNary. To date,

summer flows have averaged 58.7 Kcfs at Lower Granite and 258.7 Kcfs at McNary. Summer BiOp flow objectives are being met at both Lower Granite and McNary on a seasonal basis. Over the past week (7-12-02 to 7-18-02), flows have averaged 38.7 Kcfs at Lower Granite and 245.1 Kcfs at McNary. Therefore, on a weekly basis, flow objectives are not being met at Lower Granite.

Currently, as of July 18th, 2002, the entire Upper Snake River System is at 46% of capacity. Most reservoirs on the Upper Snake River have been drafting. Individually, American Falls is at 31% of capacity, Palisades is at 39% of capacity, Jackson Lake is at 76% of capacity, Island Park is at 63% of capacity, Lake Walcott is at 101% of capacity, Milner is at 99% of capacity, and Grassy Lake is at 91% of capacity.

Spill: Dworshak Reservoir continues to draft water for flow augmentation and temperature regulation. Spill levels have averaged 4.1 Kcfs over the past week. Tailwater total dissolved gas levels have remained below 108%. Spill has occurred at both Lower Granite and Little Goose dams over the past week averaging 20% and 18% of daily flow, respectively. At Ice Harbor Dam spill averaged 81% of daily flows over the past week.

Lower River spill as part of the Biological Opinion spill program is being provided at John Day, The Dalles and Bonneville dams. Spill at McNary Dam is water in excess of hydraulic capacity at that project. Spill averaged 31% of average daily flow at McNary Dam, 29% of average daily flow at John Day Dam, 39% of average daily flow at The Dalles Dam and 42% of average daily flow at Bonneville Dam.

Libby Dam has stopped spilling as inflows decreased, but did spill earlier this past week. Grand Coulee has stopped spilling and Chief Joseph Dams has spilled intermittently. The total dissolved gas levels have at times exceeded the water quality waivers by small percentages. Fish are currently being monitored for signs of GBT at Rock Island, McNary and Bonneville dams. Some fish have been observed with minor signs of GBT this past week at Rock Island Dam.

Smolt Monitoring: The subyearling chinook outmigration appears to be either late or the numbers are below NMFS preseason projections (or both) in the Snake River and in the Lower Columbia based on passage index data collected to date. Based on NMFS projected collection of 2 million we would have expected a cumulative passage index of 1.5 million at this time of the season (using 0.54 collection efficiency and 20% spill). To date the cumulative index at Lower Granite is only 506,000 fish. Typically, about 60% of the run has passed by July 18 whereas this year the Lower Granite passage index is only about 33% of preseason estimates. At McNary, typically over 80% of the run has passed by July 18, but this year's cumulative index of 6,709,718 is only 48% of our preseason projected cumulative index of 13.87 million (again based on NMFS estimated collection of 10.4 million and an FGE of 0.475 with 25% spill). This past week at Lower Granite Dam, the number of subyearling chinook decreased from last week with the average daily index dropping to 13,200 this week compared to 15,900 last week. At Rock Island Dam the subyearling chinook index decreased compared to last week, with 370 average daily index this week compared to 520 daily last week. In the lower Columbia, McNary continues to have large numbers of subyearling chinook pass with an average daily index of 151,000, a small increase from 143,000 per day last week. At John Day Dam passage index for subyearling chinook was up to 83,000 this week versus 33,600 last week. And at Bonneville Dam subyearling chinook numbers increased with an average daily index this week of 117,000 versus 105,000 last week.

Adult Fish Passage: At Bonneville Dam, the summer chinook counts averaged 1,440 per day for the week with the cumulative count through July 18 at 116,766. This year's count of adult summer chinook is about 1.8 and 5.0 times greater than the respective year 2001 and 10-year average through July 18. At McNary Dam, the counts of adult summer chinook averaged 1,978 per day through the week with a total count of 92,273 through July 18. The Snake River count of adult summer chinook at Ice Harbor Dam totaled 25,816 through the July 18

with daily counts averaging between 100 and 200 per day at Snake River dams. In the Mid-Columbia, the total count of adult summer chinook at Priest Rapids Dam was 66,597 through July 18, about 1.9 and 4.6 times greater than the respective 2001 and 10-year average. Daily counts of these adult summer fish continue to increase at Rock Island, Rocky Reach and Wells dams with about 26,400 now past Wells Dam.

At Bonneville Dam, sockeye salmon counts for the week ending July 18 ranged from near 600 early in the week to less than 200 per day by the end of the week with the season total at 48,939. The 2002 sockeye count is about 43% of the 2001 count and close to equal the 10-year average count. Most sockeye are destined for two lake systems (Lake Wenatchee and Lake Osoyoos) in the Mid-Columbia Zone. About 40,400 sockeye have passed Priest Rapids Dam through July 18. Small numbers of sockeye were again counted at the Snake River projects during the week with at least 43 adult sockeye now past Lower Granite Dam through July 18. These sockeye should be destined for the upper Salmon River area (Redfish L, Alturas L, or Pettit L).

Steelhead passage at Bonneville Dam averaged 4,027 per day through the past week with a total of 77,397 counted through July 18. This total is 79% and 215% of the respective 2001 and 10-year average counts to date. Estimated wild steelhead in the passage total was 33,500 (based on visual missing adipose fin on the steelhead). Adult steelhead are moving upstream into the Snake River projects with about 500 per day passing Ice Harbor Dam by the end of the reporting week. In the Mid-Columbia, the counts of steelhead at Priest Rapids Dam ranged from 60-112 per day and total 1,966 through June 18.

Hatchery Releases: Only one hatchery release group remains for the 2002 fish migration season. All other subyearling fish, fall and summer chinook are in-river. Preliminary hatchery release totals are listed in the Table below for the Snake, Mid-Columbia, and Lower Columbia River Zones.

Snake River - All subyearling fall chinook in the Snake River basin have been released for the 2002 Migration Year.

Mid-Columbia [above McNary Dam] - The final releases of subyearling summer and fall chinook have been completed for the season.

Lower Columbia [Bonneville Dam to McNary Dam]- About four million subyearling fall chinook will be released into the Klickitat River beginning June 3 and lasting through about July 26. Three separate releases are scheduled with the initial release planted on June 3, the second release on July 1-5, and the final release from July 19-26. All other subyearling fall chinook have been released earlier this spring/summer.

Hatchery Release Totals by River Zone for 2002 Migration Season

	Spr Chin	SumChin	F Chin	Steelhd	Coho	Sockeye	Total

* See sampling comments <http://www.fpc.org/currentDaily/smpcomments.htm>

These data are preliminary and have been derived from various sources. For verification and/or origin of these data, contact the operators of the Fish Passage Data System at (503) 230-4099.

Smolt indices, clipped & unclipped or combined, are presented in the following order: yearling chinook (chinook 1's), subyearling chinook (chinook 0's), steelhead, coho, and sockeye. Two classes of fish counts are shown in these tables: collection counts, which account for sample rates but are not adjusted for flow; and passage indices, which are collection counts divided by the proportion of water passing through the sampled powerhouse. Passage indices are not population estimates, but are used to adjust collection counts for daily fluctuations in the site's or project's operations. The classes of counts presented in the report are defined below for each site. Most samples occur over a 24-hr period that spans two calendar days. In this report, the date shown corresponds with the sample end date.

RIS and RRH counts are through 7/12; WEL counts are through 7/17.

RIS, RRH, PRD and WEL data for the last week is from the PUDs.

**PRD is not reporting Wild Steelhead numbers.

These numbers were collected from the COE's Running Sums text files, except where otherwise noted.

Wild steelhead numbers are included in the total.

Historic counts (pre-1996) were obtained from CRITFC and compiled by the FPC.

Historic counts 1997 to present were obtained from the Corps of Engineers.
