# Weekly Report #02 - 20

July 26, 2002

2501 SW First Ave., Suite 230  
 Portland, OR 97201-4752  
 phone: 503/230-4582  
 fax: 503/230-7559

**SUMMARY OF EVENTS:**

- COE has agreed to release 45°F water from the Dworshak Reservoir over the next several weeks to help mitigate increasing water temperatures in the Lower Snake River.
- TMT agreed on a summer reservoir operation for Hungry Horse: outflows of 4 Kcfs through August 4th, outflows of 6 Kcfs from August 5th to 25th, and outflows 4 Kcfs from August 26-31st.
- The BiOp summer flow objectives are 51 Kcfs at Lower Granite and 200 Kcfs at McNary. To date, summer flows have averaged 53.3 Kcfs at Lower Granite and 245.8 Kcfs at McNary; therefore, flow objectives are being met on a seasonal basis at both projects. Weekly average flows between 7-19-02 and 7-25-02 at Lower Granite and McNary were 31.6 and 212.4 Kcfs; therefore, flow objectives are not being met on a weekly basis at Lower Granite.
- Combined storage in the Upper Snake River System is at 41% of capacity.

**Water:** Water Year 2002 continues to be approximately average in terms of cumulative precipitation. Weekly precipitation totals have been updated through the 16th of July (Table 1). Precipitation throughout the beginning of July has ranged between 24% and 107% of average within the Columbia Basin.

**Table 1. Summary of July precipitation and cumulative October through July precipitation with respect to average (1971-2000), at select locations within the Columbia and Snake River Basins.**

Location	July 2002		Cumulative 10/1/01 – 7/9/02	
	Observed (inches)	% Avg	Observed (inches)	% Avg
Columbia Above Coulee	0.96	105	21.87	102
Snake R. Above Ice Harbor	0.15	31	13.59	87
Columbia Above The Dalles	0.52	82	19.77	97
Kootenai	1.05	107	20.59	94
Clark Fork	0.46	75	15.43	104
Flathead	0.67	82	20.76	106
Pend Oreille/Spokane	0.69	97	31.65	113
Central Washington	0.15	78	7.39	91
Snake R. Plain	0.07	24	6.90	70
Clearwater	0.39	52	29.07	106
SW Washington Cascades/Cowlitz	0.29	40	71.65	108
Willamette Valley	0.11	26	56.06	100

Flows within the Columbia Basin have been decreasing. Storage reservoirs along the Columbia and Snake Rivers are generally at or near full and operators are either passing inflows or beginning to draft.

The Grand Coulee Reservoir has drafted 1.1 feet over last week; beginning the week at 1288.4 feet (7-19-02) and ending at 1287.3 feet (7-25-02). Total outflows have averaged 155 Kcfs over the past week (7-19-02 to 7-25-02).

The Libby reservoir has drafted 1.1 feet over the past week (7-19-02 to 7-25-02); reservoir elevations have ranged from 2458.5 to 2457.4 feet. Outflows have been constant at 22.0 Kcfs over the week. Over the last week, inflows to Libby have been decreasing, beginning the week at 20.6 Kcfs and ending at 15.5 Kcfs. Operators at Libby did not spill any water over the week from 7-19-02 to 7-25-02. Currently (7-25-02), Libby is at an elevation of 2457.4 feet.

The Dworshak reservoir continues to draft. Over the last week, total outflows at Dworshak have fluctuated between 13.6 and 13.9 Kcfs (7-19-02 to 7-25-02) to supplement flows and temperatures at Lower Granite. Operations at Dworshak continue to involve spilling between 3.9 and 4.1 Kcfs of reservoir water. At the request of FPAC, COE will release 45°F water from Dworshak over the next several weeks. Currently (midnight, 7-25-02) Dworshak is at an elevation of 1584.9 feet.

Over the past week, the Brownlee reservoir has remained relatively steady, refilling 0.2 feet. Brownlee began the last week at 2071.7 feet (7-19-02) and ended at 2071.9 feet (7-25-02). During the week, outflows have varied between 4.8 and 11.8 Kcfs.

The Hungry Horse Reservoir has begun to draft over the past week; beginning the week at an elevation of 3559.4 feet and ending the week at 3558.8 feet. Total outflows at Hungry Horse have averaged 4.2 Kcfs over the last week (7-19-02 to 7-25-02). At the July 24, 2002 TMT meeting, the salmon managers agreed that operations at Hungry Horse would include outflows of approximately 4 Kcfs through the 4th of August, 6Kcfs from the 5th through 25th of August, and back to 4 Kcfs through the end of August.

The BiOp summer flow objective season began at Lower Granite on 6-21-02 and at McNary on 7-1-02. The summer objectives are 51 Kcfs at Lower Granite and 200 Kcfs at McNary. To date, summer flows have averaged 53.3 Kcfs at Lower Granite and 245.8 Kcfs at McNary. Summer BiOp flow objectives are being met at both Lower Granite and McNary on a seasonal basis. Over the past week (7-19-02 to 7-25-02), flows have averaged 31.6 Kcfs at Lower Granite and 212.4 Kcfs at McNary. Therefore, on a weekly basis, flow objectives are not being met at Lower Granite.

Currently, as of July 25th, 2002, the entire Upper Snake River System is at 41% of capacity. Most reservoirs on the Upper Snake River have been drafting. Individually, American Falls is at 26% of capacity, Palisades is at 32% of capacity, Jackson Lake is at 72% of capacity, Island Park is at 54% of capacity, Lake Walcott is at 99% of capacity, Milner is at 96% of capacity, and Grassy Lake is at 87% of capacity.

**Spill:** Dworshak Reservoir continues to draft water for flow augmentation and temperature regulation. Spill levels have averaged 4 Kcfs over the past week. Tailwater total dissolved gas levels have remained below 108%. No spill has occurred at the Snake River transportation collector projects this past week. At Ice Harbor Dam spill averaged 78% of daily flows over the past week.

Lower River spill as part of the Biological Opinion spill program is being provided at John Day, The Dalles and Bonneville dams. Spill at McNary Dam is water in excess of hydraulic capacity at that project. Spill averaged 22% of average daily flow at McNary Dam, 27% of average daily flow at John Day Dam, 39% of average daily flow at The Dalles Dam and 59% of average daily flow at Bonneville Dam.

The total dissolved gas levels have at times exceeded the water quality waivers by small percentages. Fish are currently being monitored for signs of GBT at Rock Island, McNary and Bonneville dams. Some fish have been observed with minor signs of GBT this past week at Rock Island Dam this past week.

**Smolt Monitoring:** The subyearling chinook outmigration appears to be either late or the numbers are below NMFS preseason projections (or both) in the Snake River and in the Lower Columbia based on passage index data collected to date.

At Lower Granite Dam this past week the, number of subyearling chinook increased compared to last week with the average daily index at 19,200 this week compared to 13,200 last week. At Rock Island Dam the subyearling chinook index increased compared to last week, with 460 average daily index this week compared to 370 daily last week. In the lower Columbia, passage of subyearlings at McNary dropped off considerably, with an average daily index of 69,000, compared to 151,000 per day last week. At John Day Dam passage index for subyearling chinook was down sharply also, with the index averaging 22,800 this week versus 83,000 last week. And at Bonneville Dam subyearling chinook numbers decreased as well with an average daily index this week of 39,400 versus 117,000 last week.

**Adult Fish Passage:** As is somewhat normal for this time of summer, water temperatures are increasing throughout the Columbia River basin. Counts of steelhead at Bonneville Dam and The Dalles Dam are beginning to show a large differential and would indicate that about 50% of the fish are likely entering tributaries such as the Big White Salmon and Drano Lake in the Bonneville pool to seek cooler water temperatures than presently found in the mainstem Columbia River. Upstream at Lower Granite Dam, passage of steelhead and chinook has fallen rapidly in the past 4-days due to the warm water temperatures that are above 70°F (surface water temps.).

At Bonneville Dam, the summer chinook counts averaged 944 per day for the week with the cumulative count through July 25 at 123,371. This year's count of adult summer chinook is about 1.7 and 4.9 times greater than the respective year 2001 and 10-year average through July 25. At McNary Dam, the adult summer chinook count averaged 989 per day through the week with a total count of 100,633 through July 25. The Snake River count of adult summer chinook at Ice Harbor Dam

totaled 26,168 through the July 25 with daily counts averaging less than 100 per day at the remaining Snake River dams. In the Mid-Columbia, the cumulative count of adult summer chinook at Priest Rapids Dam was 76,973 through July 24, about 2.0 times and 5.4 times greater than the respective 2001 and 10-year average. At Wells Dam about 38,400 have been counted through the 24th of July with 59,200 above Rocky Reach Dam through July 22nd.

At Bonneville Dam, sockeye salmon counts for the week ending July 25 ranged from near 100 early in the week to about 50 per day by the end of the week with the season total at 49,364. The 2002 sockeye count is about 43% of the 2001 count and about 99% of the 10-year average count. Most sockeye are destined for two lake systems (Lake Wenatchee and Lake Osoyoos) in the Mid-Columbia Zone. About 43,900 sockeye have passed Priest Rapids Dam to date. The number of sockeye counted at Rocky Reach Dam (13,328 through July 22) will be destined for the Lake Osoyoos. This year's return would indicate that the majority of sockeye would be Lake Wenatchee stock. In the Snake River, at least 47 adult sockeye have been counted at Lower Granite Dam through July 25. These sockeye should be destined for the upper Salmon River area (Redfish L, Alturas L, or Pettit L).

Steelhead passage at Bonneville Dam averaged 5,293 per day through the past week with a total of 114,445 counted through July 25. This total is 74.8% and 216.7% of the respective 2001 and 10-year average counts to date. Estimated wild steelhead in the passage total was 48,130 (based on visual missing adipose fin on the steelhead). Adult steelhead are moving upstream into the Snake River projects with about 600-700 per day passing Ice Harbor Dam through the reporting week. As noted above, warm water temperatures in the Snake River caused fish to slow their migration with only 50 steelhead per day counted at Lower Granite during the past four days. In the Mid-Columbia, the counts of steelhead at Priest Rapids Dam ranged from 101-225 per day and total 2,036 through June 24. The passage of steelhead into the Snake and Mid-Columbia Rivers remains about double the 10-year average to date.

**Hatchery Releases:** All subyearling fish, fall and summer chinook, are in-river. Preliminary hatchery release totals are listed in the Table below the Snake, Mid-Columbia, and Lower Columbia River Zones.

*Snake River* - All subyearling fall chinook in the Snake River basin have been released for the 2002 Migration Year.

*Mid-Columbia [above McNary Dam]* - The final releases of subyearling summer and fall chinook have been completed for the season.

*Lower Columbia [Bonneville Dam to McNary Dam]*- About four million subyearling fall chinook will be released into the Klickitat River beginning June 3 and lasting through about July 17. Three separate releases are scheduled with the initial release planted on June 3, the second release on July 1-5, and the final release from July 17. All other subyearling fall chinook have been released earlier this spring/summer.

<http://www.fpc.org/currentDaily/smpcomments.htm>

These data are preliminary and have been derived from various sources. For verification and/or origin of these data, contact the operators of the Fish Passage Data System at (503) 230-4099.

Smolt indices, clipped & unclipped or combined, are presented in the following order: yearling chinook (chinook 1's), subyearling chinook (chinook 0's), steelhead, coho, and sockeye. Two classes of fish counts are shown in these tables: collection counts, which account for sample rates but are not adjusted for flow; and passage indices, which are collection counts divided by the proportion of water passing through the sampled powerhouse. Passage indices are not population estimates, but are used to adjust collection counts for daily fluctuations in the site's or project's operations. The classes of counts presented in the report are defined below for each site. Most samples occur over a 24-hr period that spans two calendar days. In this report, the date shown corresponds with the sample end date.

**Definitions for Smolt Index Counts**

WTB (Collection) = Salmon River Trap at Whitebird : Collection Counts

IMN (Collection) = Imnaha River Trap : Collection Counts

GRN (Collection) = Grande Ronde River Trap : Collection Counts

LEW (Collection) = Snake River Trap at Lewiston : Collection Counts

LGR (Index) = Lower Granite Dam Bypass Collection System : Passage Index Counts

Passage Index = Collection Counts / {Powerhouse Flow / (Powerhouse Flow + Spill)}

LGS (Index) = Little Goose Bypass Collection System : Passage Index Counts

Passage Index = Collection Counts / {Powerhouse Flow / (Powerhouse Flow + Spill)}

LMN (Index) = Lower Monumental Dam Bypass Collection System : Passage Index Counts

Passage Index = Collection Counts / {Powerhouse Flow / (Powerhouse Flow + Spill)}

RIS (Index) = Rock Island Dam Second Powerhouse Bypass Trap : Passage Index Counts

Passage Index = Collection Counts / {Powerhouse 2 Flow / (Powerhouse 1 & 2 Flow + Spill)}

MCN (Index) = McNary Dam Bypass Collection System : Passage Index Counts

Passage Index = Collection Counts / {Powerhouse Flow / (Powerhouse Flow + Spill)}

JDA (Index) = John Day Dam Bypass Collection System : Passage Index Counts

Passage Index = Collection Counts / {Powerhouse Flow / (Powerhouse Flow + Spill)}

BO2 (Index) = Bonneville Dam Second Powerhouse Bypass Collection System : Passage Index Counts

Passage Index = Collection Counts / {Powerhouse 2 Flow / (Powerhouse 1 & 2 Flow + Spill)}

BO1 (Index) = Bonneville Dam First Powerhouse Bypass Collection System : Passage Index Counts

Passage Index = Collection Counts / {Powerhouse 1 Flow / (Powerhouse 1 & 2 Flow + Spill)}

JDA and BO2 data collected for the FPC by Pacific States Marine Fisheries Commission.

RIS data collected for the FPC by Chelan Co. PUD/Washington Dept. of Fish and Wildlife.

LGR, LMN, and MCN data collected for the FPC by Washington Dept. of Fish and Wildlife.

LGS and GRN data collected for the FPC by Oregon Dept. of Fish and Wildlife.

IMN data collected for the FPC by the Nez Perce Tribe.

RIS is through 07/17; RRH, PRD and WEL are through 07/24.

IHR is missing 07/22, RIS has no chinook jack counts for 7/9 & 7/13, RRH none for 7/22.

RIS, RRH, PRD and WEL data for the last week is from the PUDs.

\*\*PRD is not reporting Wild Steelhead numbers.

These numbers were collected from the COE's Running Sums text files, except where otherwise noted.

Wild steelhead numbers are included in the total.

Historic counts (pre-1996) were obtained from CRITFC and compiled by the FPC.

Historic counts 1997 to present were obtained from the Corps of Engineers.
