

Fish Passage Center

Weekly Report #02 - 21

August 2, 2002

2501 SW First Ave., Suite 230
 Portland, OR 97201-4752
 phone: 503/230-4582
 fax: 503/230-7559

SUMMARY OF EVENTS:

- The BiOp summer flow objectives are 51 Kcfs at Lower Granite and 200 Kcfs at McNary. To date, summer flows have averaged 49.1 Kcfs at Lower Granite and 228.4 Kcfs at McNary; therefore, flow objectives are being met on a seasonal basis only at McNary. Weekly average flows between 7-26-02 and 8-1-02 at Lower Granite and McNary were 28.2 and 166.3 Kcfs; therefore, flow objectives are not being met at either project on a weekly basis.
- Combined storage in the Upper Snake River System is at 36% of capacity.

Water: Water Year 2002 continues to be approximately average in terms of cumulative precipitation. Weekly precipitation totals have been updated through the 31st of July (Table 1). Precipitation throughout July has been well below normal, ranging between 21% and 68% of average within the Columbia Basin.

Flows within the Columbia Basin have been decreasing. Storage reservoirs along the Columbia and Snake Rivers are generally at or near full and operators are either passing inflows or beginning to draft.

The Grand Coulee Reservoir has drafted 1.2 feet over last week; beginning the week at 1287.5 feet (7-26-02) and ending at 1286.3 feet (8-1-02). Total outflows have averaged 120.2 Kcfs over the past week (7-26-02 to 8-1-02).

Table 1. Summary of July precipitation and cumulative October through July precipitation with respect to average (1971-2000), at select locations within the Columbia and Snake River Basins.

Location	July 2002		Cumulative 10/1/01 – 7/31/02	
	Observed (inches)	% Avg	Observed (inches)	% Avg
Columbia Above Coulee	1.21	68	22.14	99
Snake R. Above Ice Harbor	0.38	41	13.83	86
Columbia Above The Dalles	0.73	59	19.99	96
Kootenai	1.28	67	20.85	91
Clark Fork	0.65	54	15.86	103
Flathead	0.98	61	21.02	103
Pend Oreille/Spokane	0.73	53	31.70	111
Central Washington	0.15	40	7.33	88
Snake R. Plain	0.23	38	7.06	69
Clearwater	0.52	36	29.22	103
SW Washington Cascades/Cowlitz	0.33	24	71.69	107
Willamette Valley	0.17	21	56.12	99

The Libby reservoir has drafted 2.2 feet over the past week (7-26-02 to 8-1-02); reservoir elevations have ranged from 2457.0 to 2454.8 feet. Outflows have ranged between 22.5 Kcfs and 18.8 Kcfs over the last week. Currently (8-1-02), Libby is at an elevation of 2454.8 feet.

The Dworshak reservoir continues to draft. Over the last week, total outflows at Dworshak have fluctuated between 13.2 and 13.6 Kcfs (7-26-02 to 8-1-02) to supplement flows and temperatures at Lower Granite. Operations at Dworshak continue to involve spilling between 3.8 and 3.9 Kcfs of reservoir water. Currently (midnight, 8-1-02) Dworshak is at an elevation of 1576.7 feet, drafting 7.1 feet over the last week.

Over the past week, the Brownlee reservoir has remained relatively steady, beginning and ending the week at 2071.9 feet. During the week, outflows have varied between 6.5 and 9.3 Kcfs.

The Hungry Horse Reservoir continues to draft; beginning the week at an elevation of 3558.6 feet and ending the week at 3557.0 feet. Total outflows at Hungry Horse have ranged between 4.0 and 6.0 Kcfs over the last week (7-26-02 to 8-1-02). Currently (midnight, 8-1-02) Hungry Horse is at an elevation of 3557.0 feet.

The BiOp summer flow objective season began at Lower Granite on 6-21-02 and at McNary on 7-1-02. The summer objectives are 51 Kcfs at Lower Granite and 200 Kcfs at McNary. To date, summer flows have averaged 49.1 Kcfs at Lower Granite and 228.4 Kcfs at McNary. Summer BiOp flow objectives are being met at McNary, but not Lower Granite, on a seasonal basis. Over the past week (7-26-02 to 8-1-02), flows have averaged 28.2 Kcfs at Lower Granite and 166.3 Kcfs at McNary. Therefore, on a weekly basis, flow objectives are not being met at either McNary or Lower Granite.

Currently, as of August 1st, 2002, the entire Upper Snake River System is at 36% of capacity. Most reservoirs on the Upper Snake River have been drafting. Individually, American Falls is at 22% of capacity, Palisades is at 27% of capacity, Jackson Lake is at 67% of capacity, Island Park is at 48% of capacity, Lake Walcott is at 96% of capacity, Milner is at 99% of capacity, and Grassy Lake is at 87% of capacity.

Spill: Dworshak Reservoir continues to draft water for flow augmentation and temperature regulation. Spill levels have averaged 3.9 Kcfs over the past week. Tailwater total dissolved gas levels have remained below 107%. No spill has occurred at the Snake River transportation collector projects this past week. At Ice Harbor Dam spill averaged 81% of daily flows over the past week.

Lower River spill as part of the Biological Opinion spill program is being provided at John Day, The Dalles and Bonneville dams. Spill at McNary Dam is water in excess of hydraulic capacity at that project. Spill averaged 8% of average daily flow at McNary Dam, 29% of average daily flow at John Day Dam, 39% of average daily flow at The Dalles Dam and 63% of average daily flow at Bonneville Dam.

The total dissolved gas levels remain below the water quality waivers. Fish are currently being monitored for signs of GBT at Rock Island, McNary and Bonneville dams. Some fish have been observed with minor signs of GBT this past week at Rock Island Dam this past week.

Smolt Monitoring: At Lower Granite Dam this past week the, number of subyearling chinook decreased compared to last week with the average daily index at 4,700 this week compared to 19,200 last week. At Rock Island Dam the subyearling chinook index decreased compared to last week, with 385 average daily index this week compared to 460 daily last week. In the lower Columbia, passage of subyearlings at McNary dropped off considerably, with an average daily index of 28,000, compared to 69,000 per day last week. At John Day Dam passage index for subyearling chinook was down sharply also, with the index averaging 8,100 this week versus 22,800 last week. And at Bonneville Dam subyearling chinook numbers decreased as well with an average daily index this week of 26,000 versus 39,400 last week.

Adult Fish Passage: Over the next few weeks, the chinook passing the projects will automatically be changing to fall chinook starting August 1 at Bonneville Dam and every two to four days later at each subsequent upstream project. The prognosis for the fall chinook run indicates that this year's return should be very good with greater than 670,000 projected to return to the Columbia River.

At Bonneville Dam, counts of adult summer chinook averaged 679 per day for the week with the cumulative count through July 31 at 127,442. This year's count of adult summer chinook is about 1.7 and 4.8 times greater than the respective year 2001 and 10-year average. At McNary Dam, the adult summer chinook count averaged 725 per day through the week with a total count of 104,985 through August 1. The Snake River count of adult summer chinook at Ice Harbor Dam totaled 26,391 through August 1, with daily counts averaging less than 50 per day at the Snake River dams. In the Mid-Columbia, the cumulative count of adult summer chinook at Priest Rapids Dam was 83,801 through July 31, about 1.8 times and 5.1 times greater than the respective 2001 and 10-year average. At Rock Island Dam about 67,000 have been counted through July 28 with 45,600 counted above Wells Dam through July 29.

At Bonneville Dam, the sockeye passage season is nearly complete with the season total at 49,556 through August 1. The 2002 sockeye count is about 43% of the 2001 count and 99% of the 10-year average count. Of the 49,600 over Bonneville Dam, about 45,300 sockeye have passed Priest Rapids Dam to date. The number of sockeye counted at Rocky Reach Dam (15,504 through July

30) will be destined for Lake Osoyoos. Based on the Rock Island count and subtracting off the Rocky Reach count should give an estimated number of sockeye returning to Lake Wenatchee. In the Snake River, at least 49 adult sockeye have been counted at Lower Granite Dam through August 1. These sockeye should be destined for the upper Salmon River area (Redfish Lake, Alturas Lake, or Pettit Lake).

Steelhead passage at Bonneville Dam averaged 5,102 per day through the past week with a total of 150,160 counted through August 1. This total is 64% and 193% of the respective 2001 and 10-year average counts to date. Estimated wild steelhead in the passage total was 60,685 (based on visual missing adipose fin on the steelhead). Adult steelhead are moving upstream into the Snake River with 500-600 per day passing Ice Harbor Dam through the reporting week. Water temperatures reduced from the previous week at Lower Granite Dam and as a result passage numbers increased through this week. In the Mid-Columbia, the counts of steelhead at Priest Rapids Dam ranged from 140-240 per day and total 3,311 through July 31. The passage of steelhead into the Snake and Mid-Columbia Rivers remains about double the 10-year average to date.

Hatchery Releases: All hatchery releases for the 2002 fish migration season are completed. The FPC will be updating and finalizing hatchery release groups during the next few months. Preliminary hatchery release totals are listed in the Table below the Snake, Mid-Columbia, and Lower Columbia River Zones.

Hatchery Release Totals by River Zone for 2002 Migration Season

	Spr Chin	SumChin	F Chin	Steelhd	Coho	Sockeye	Total

<http://www.fpc.org/currentDaily/smpcomments.htm>

These data are preliminary and have been derived from various sources. For verification and/or origin of these data, contact the operators of the Fish Passage Data System at (503) 230-4099.

Smolt indices, clipped & unclipped or combined, are presented in the following order: yearling chinook (chinook 1's), subyearling chinook (chinook 0's), steelhead, coho, and sockeye. Two classes of fish counts are shown in these tables: collection counts, which account for sample rates but are not adjusted for flow; and passage indices, which are collection counts divided by the proportion of water passing through the sampled powerhouse. Passage indices are not population estimates, but are used to adjust collection counts for daily fluctuations in the site's or project's operations. The classes of counts presented in the report are defined below for each site. Most samples occur over a 24-hr period that spans two calendar days. In this report, the date shown corresponds with the sample end date.

PRD is through 07/31; RRH is through 07/30; WEL is through 07/29; RIS is through 07/28.

MCN is missing 07/30

RIS, RRH, PRD and WEL data for the last week is from the PUDs.

**PRD is not reporting Wild Steelhead numbers.

These numbers were collected from the COE's Running Sums text files, except where otherwise noted.

Wild steelhead numbers are included in the total.

Historic counts (pre-1996) were obtained from CRITFC and compiled by the FPC.

Historic counts 1997 to present were obtained from the Corps of Engineers.
