

## Fish Passage Center

# Weekly Report #02 - 29

October 4, 2002

2501 SW First Ave., Suite 230  
Portland, OR 97201-4752  
phone: 503/230-4582  
fax: 503/230-7559

**Water:** River flows within the Columbia Basin are low. Over the last two weeks, flows have averaged 20 Kcfs in the lower Snake River (Lower Granite outflows), 85 Kcfs in the middle Columbia River (Priest Rapids outflows), and 105 Kcfs in the lower Columbia River (McNary outflows). Storage reservoirs along the Columbia and Snake Rivers have either been holding steady or drafting.

Grand Coulee has remained relatively steady over the last two weeks; reservoir elevations have ranged between 1286.4 feet (9-20-02) and 1287.8 feet (10-3-02). Total outflows over the past two weeks have averaged 78.1 Kcfs.

The Libby Reservoir has drafted 1.0 foot over the past two weeks (9-20-02 to 10-3-02); reservoir elevations have ranged from 2441.3 to 2440.3 feet. Outflows have been steady at 6.0 Kcfs over the past two weeks.

The Dworshak Reservoir drafted only 0.7 feet over the last two weeks (9-20-02 to 10-3-02). Total outflows are now at the minimum project discharge of 1.4 Kcfs. Dworshak is currently at an elevation of 1518.4 feet.

Over the past six days, the Brownlee Reservoir has drafted 4.4 feet, beginning the week at 2045.3 and ending the week at 2040.9 feet. During the week, outflows have varied between 12.3 and 19.4 Kcfs.

The Hungry Horse Reservoir elevation has remained steady over the last two weeks at 3539.5 feet. Total outflows at Hungry Horse have ranged between 4.0 and 1.8 Kcfs over the last two weeks (9-20-02 to 10-3-02).

As of October 3<sup>rd</sup>, 2002, the entire Upper Snake River system is at 11% of capacity. Individually, American Falls is at 3% of capacity, Palisades is at 7% of capacity and Jackson Lake is at 27% of capacity.

The Boise and Payette River systems are currently (10-3-02) at 21% and 52% of capacity, respectively. Within these basins, the Cascade Reservoir is at 57% of full and Anderson Ranch is at 27% of full.

**Smolt Monitoring:** This past week there were increased numbers of subyearling chinook being captured at all SMP sites except Bonneville Dam, where the average index stayed the same as last week. In the Lower Snake River, at Lower Granite the average daily index of subyearling chinook was 780 this week compared to 530 last week. At other Snake River dams the numbers of subyearlings were up as well; at Little Goose and Lower Monumental the average daily indices at the sites were 112 and 47 respectively up from 9 and 38 the previous week.

In the lower Columbia, the passage index increased at McNary from 540 per day last week to 670 per day this week. At Bonneville Dam subyearling chinook numbers were identical the past two weeks, with an average daily index of 165 both weeks.

**Adult Fish Passage:** At Bonneville Dam, counts of adult fall chinook ranged between 5,384 fish per day at the beginning of the report week (9/20) to about 1,000 fish per day at the end of the report week (10/3), with the cumulative count through October 3 at 461,479. This year's count of adult fall chinook was about 1.2 and 2.4 times greater than the respective year 2001 and 10-year average. At The Dalles, about 235,000 Upriver Bright (URB) fall chinook have been counted with near 130,300 now past McNary Dam. Passage of fall chinook at Ice Harbor Dam ranged from about 600 to 150 per day for the past two weeks with the total through October 3 of 14,341. This year's count is about 1.2 times and 3.4 times greater than the respective 2001 and 10-year average. At Priest Rapids Dam, about 21,500 adult fall chinook were counted through October 3. A large percentage of the wild component of the upriver run will be destined for the Hanford Reach area (below Priest Rapids Dam) of the Mid-Columbia River. To-date this season's run of tule (record run) and upriver bright stocks of adult fall chinook counted past Bonneville Dam remained strong throughout the passage season. The fall chinook counts remained well above the 10-year average similar to the performance of the spring and summer races of chinook.

The number of jack fall chinook counted past Bonneville Dam exceeds the 10-year average to date (See Table). Upstream at Ice Harbor Dam, the jack count of fall chinook is greater than double the 10-year average while the count of fall chinook "jacks" at Priest Rapids Dam was about 92% of the 10-year average.

Steelhead passage at Bonneville Dam ranged from a high count of 6,290 to a low count of 1,923 through the past two weeks with the total counted now at 463,346 through October 3. This total is 75% and 181% of the respective 2001 and 10-year average counts to date. Estimated wild steelhead in the passage total was near 139,000 (based on visual missing adipose fin on the steelhead). To date, about 74.4% of the adult steelhead counted past Bonneville Dam has been counted upstream past The Dalles Dam. Daily counts ranged between 3,500 and 10,200 for the past two weeks at The Dalles. Numbers of adult steelhead counted into the Snake River and past Ice Harbor Dam ranged between 2,300 and 5,800 with the cumulative count exceeding 151,000 through October 3. In the Mid-Columbia, steelhead counts at Priest Rapids Dam ranged from 69-1,000 per day and totaled greater than 15,400 through October 3. The passage of steelhead into the Snake and Mid-Columbia Rivers was about 1.9 and 1.6 times greater than the respective 10-year averages to date. Overall, this season's run of steelhead has been very strong into the Snake (2<sup>nd</sup> only to last year's record run). The 2-ocean component of the steelhead run has shown great adult returns from the 2000 migration season both to the Snake and upper Mid-Columbia rivers.

Numbers of adult coho stayed relatively steady throughout the past 2-weeks with counts between 1,000 and 2,000 per day and the cumulative count at Bonneville Dam

now up to 54,400. Nearly 6,400 of the Bonneville coho have moved upstream past The Dalles Dam to date. A large percent of coho passing above Bonneville Dam remain in the Bonneville pool area and enter tributaries and hatcheries in this section of river. The Umatilla, Yakima, upper Mid-Columbia and Snake rivers have small coho runs that are now returning to those river systems.

**Hatchery Releases:** All hatchery releases for the 2002 fish migration season are completed. The FPC will be updating and finalizing hatchery release groups during the next few months.

<http://www.fpc.org/currentDaily/smpcomments.htm>

These data are preliminary and have been derived from various sources. For verification and/or origin of these data, contact the operators of the Fish Passage Data System at (503) 230-4099.

Smolt indices, clipped & unclipped or combined, are presented in the following order: yearling chinook (chinook 1's), subyearling chinook (chinook 0's), steelhead, coho, and sockeye. Two classes of fish counts are shown in these tables: collection counts, which account for sample rates but are not adjusted for flow; and passage indices, which are collection counts divided by the proportion of water passing through the sampled powerhouse. Passage indices are not population estimates, but are used to adjust collection counts for daily fluctuations in the site's or project's operations. The classes of counts presented in the report are defined below for each site. Most samples occur over a 24-hr period that spans two calendar days. In this report, the date shown corresponds with the sample end date.

## Two-Week Summary of Passage Indices

#### Definitions for Smolt Index Counts

WTB (Collection) = Salmon River Trap at Whitebird : Collection Counts

IMN (Collection) = Imnaha River Trap : Collection Counts

GRN (Collection) = Grande Ronde River Trap : Collection Counts

LEW (Collection) = Snake River Trap at Lewiston : Collection Counts

LGR (Index) = Lower Granite Dam Bypass Collection System : Passage Index Counts

Passage Index = Collection Counts / {Powerhouse Flow / (Powerhouse Flow + Spill)}

LGS (Index) = Little Goose Bypass Collection System : Passage Index Counts

Passage Index = Collection Counts / {Powerhouse Flow / (Powerhouse Flow + Spill)}

LMN (Index) = Lower Monumental Dam Bypass Collection System : Passage Index Counts

Passage Index = Collection Counts / {Powerhouse Flow / (Powerhouse Flow + Spill)}

RIS (Index) = Rock Island Dam Second Powerhouse Bypass Trap : Passage Index Counts

Passage Index = Collection Counts / {Powerhouse 2 Flow / (Powerhouse 1 & 2 Flow + Spill)}

MCN (Index) = McNary Dam Bypass Collection System : Passage Index Counts

Passage Index = Collection Counts / {Powerhouse Flow / (Powerhouse Flow + Spill)}

JDA (Index) = John Day Dam Bypass Collection System : Passage Index Counts

Passage Index = Collection Counts / {Powerhouse Flow / (Powerhouse Flow + Spill)}

BO2 (Index) = Bonneville Dam Second Powerhouse Bypass Collection System : Passage Index Counts

Passage Index = Collection Counts / {Powerhouse 2 Flow / (Powerhouse 1 & 2 Flow + Spill)}

BO1 (Index) = Bonneville Dam First Powerhouse Bypass Collection System : Passage Index Counts

Passage Index = Collection Counts / {Powerhouse 1 Flow / (Powerhouse 1 & 2 Flow + Spill)}

JDA and BO2 data collected for the FPC by Pacific States Marine Fisheries Commission.

RIS data collected for the FPC by Chelan Co. PUD/Washington Dept. of Fish and Wildlife.

LGR, LMN, and MCN data collected for the FPC by Washington Dept. of Fish and Wildlife.

LGS and GRN data collected for the FPC by Oregon Dept. of Fish and Wildlife.

IMN data collected for the FPC by the Nez Perce Tribe.

RIS, RRH are through 10/02; WEL is through 10/01.

RIS, RRH, PRD and WEL data for the last week are from the PUDs.

\*\*PRD is not reporting Wild Steelhead numbers.

These numbers were collected from the COE's Running Sums text files, except where otherwise noted.

Wild steelhead numbers are included in the total.

Historic counts (pre-1996) were obtained from CRITFC and compiled by the FPC.

Historic counts 1997 to present were obtained from the Corps of Engineers.
