

Fish Passage Center Weekly Report #06 - 13

June 2, 2006

1827 NE 44th Ave., Suite 240
 Portland, OR 97213
 phone: 503/230-4099
 fax: 503/230-7559

Summary of Events:

Water Supply: Precipitation throughout the Columbia Basin has varied between 73% and 124% of average at individual sub-basins over May. Precipitation above The Dalles over May has been 92% of average. Over the entire water year, precipitation has been average or above average at all listed locations.

Table 1. Summary of May precipitation and cumulative October through May precipitation with respect to average (1971-2000), at select locations within the Columbia and Snake River Basins.

Location	Water Year 2006 May 1-29		Water Year 2006 October 1, 2005 to May 29	
	Observed (inches)	% Average	Observed (inches)	% Average
Columbia Above Coulee	1.88	90	19.75	110
Snake River Above Ice Harbor	1.41	80	17.16	127
Columbia Above The Dalles	1.70	92	19.99	112
Kootenai	2.06	99	21.07	114
Clark Fork	1.39	73	14.63	120
Flathead	1.88	82	18.98	118
Pend Oreille/Spokane	2.35	96	27.86	112
Central Washington	0.90	124	9.69	133
Snake River Plain	1.03	75	10.79	126
Salmon/Boise/Payette	1.26	75	21.99	137
Clearwater	2.81	99	26.64	111
SW Washington Cascades/Cowlitz	3.36	95	63.79	102
Willamette Valley	3.12	95	58.81	110

Table 2 displays the April Final, May Final, and June Early runoff volume forecasts for multiple reservoirs. The June Early forecast at The Dalles between January and July is 111000 Kaf (103% of average).

Table 2. April Final, May Final, and June Early Runoff Volume Forecasts for various reservoirs within the Columbia and Snake River Basins.

Location	April Final		May Final		June Early Month	
	% Average (1971-2000)	Probable Runoff Volume (Kaf)	% Average (1971-2000)	Probable Runoff Volume (Kaf)	% Average (1971-2000)	Probable Runoff Volume (Kaf)
The Dalles (Jan-July)	100	107000	103	110000	103	111000
Grand Coulee (Jan-July)	96	60600	98	61900	101	63300
Libby Res. Inflow, MT (Jan-July)	96	6030	98	6160	100	6300
Hungry Horse Res. Inflow, MT (Jan-July)	99	2210	101	2250	105	2330
Lower Granite Res. Inflow (Apr-July)	118	25500	126	27100	125	27000
Brownlee Res. Inflow (Apr-July)	133	8380	143	9020	147	9290
Dworschak Res. Inflow (Apr-July)	96	2540	101	2670	107	2840

Snowpack within the Columbia Basin is diminishing. Average snowpack in the Columbia River for basins above the Snake River confluence is 77% of average, for Snake River Basins the average snowpack is 63% of average, and for lower Columbia Basins between McNary and Bonneville Dam average snowpack 74% of average.

Grand Coulee Reservoir is at 1273.3 feet (6-1-06) and has refilled 5.3 feet over the last week. Inflow has ranged from 209.2 to 269.1 Kcfs, while outflow has ranged 154.8 to 224.4 Kcfs.

The Libby Reservoir is currently at elevation 2450.2 feet (6-1-06) and refilled 2.8 feet last week. Outflows have been approximately 25 Kcfs for sturgeon flow operations. Inflow over the same period ranged from 30.5 to 55.5 Kcfs.

Hungry Horse is currently at an elevation of 3545.7 feet (6-1-06) and refilled 4.7 feet last week. Outflows at Hungry Horse have been approximately 4.0 Kcfs, inflow ranged between 8.9 and 20.3 Kcfs last week.

Dworshak is currently at an elevation of 1582.8 feet (6-1-06) and refilled 5.1 feet last week; outflows at Dworshak have increased from 4.3 to 7.5 Kcfs over the last week. Inflows ranged between 13 and 17.7 Kcfs over the same period.

The Brownlee Reservoir was at an elevation of 2075.1 feet on June 1st, 2006 (refilled 1.9 feet last week). Outflows at Hells Canyon have been as high as 43.5 Kcfs over the last week.

The Biological Opinion flow period began on April 3rd in the lower Snake River (Lower Granite) and on April 10th in the mid (Priest Rapids) and lower (McNary) Columbia River. According to the last Water Supply Forecast (April Final), the flow objectives this spring will be 100 Kcfs at Lower Granite, 260 Kcfs at McNary, and 135 Kcfs at Priest Rapids. Flows at Lower Granite have averaged 131.4 Kcfs over the season and 124.3 Kcfs last week; flows at McNary have averaged 330.4 Kcfs over the season and 375.6 Kcfs last week; and flows at Priest Rapids have averaged 178 Kcfs over the season and 237.6 Kcfs last week.

Spill: No spill occurred at Dworshak Dam over the past week. Spill operations for fish passage at the Lower Snake River projects began on April 3, 2006 in accordance with the December 29, 2005 District Court Order and Opinion. High flows early in the past week resulted in uncontrolled (excess hydraulic capacity) spill at the Snake River projects, however by week's end the flow levels had dropped low enough that spill could be controlled. Spill at Lower Granite, Little Goose, Lower Monumental and Ice Harbor dams averaged 35%, 32%, 26% and 42% of average daily flow over the past week, respectively. All projects exceeded the levels specified in the Court's Order early in the week. However, by Thursday the spill at Lower Granite was reduced to 20 Kcfs was reduced to less than the 30% specified in the Court's Order due to high levels of TDG in the Lower Monumental forebay, spill at Lower Monumental Dam was also decreased substantially due to forebay TDG reading at Ice Harbor Dam, and Ice Harbor Dam spilled according to the research protocol.

Spill for fish passage began on April 10 at Lower Columbia River projects. Peak flows occurred in the lower Columbia over the past week and uncontrolled spill levels were observed. Flows began to recede later in the week and spill levels decreased. Spill at McNary, John Day, The Dalles and Bonneville dams was 54%, 43%, 45% and 41% of average daily flow, respectively. McNary Dam has been exceeding the requirements of the Court's Order. John Day Dam is being operated with a limited hydraulic capacity and spill here also exceeded the Court's Order. Spill at The Dalles Dam exceeded the 40% instantaneous spill called for in the Court's Order earlier in the week, but was decreased to less than 40% on Thursday to address forebay gas concentrations at Bonneville Dam. Spill at Bonneville Dam has exceeded the Court Order over the past week.

High flows have resulted in total dissolved gas levels that have exceeded the TDG waiver limits at most locations over the past week, particularly at the Snake River projects. Biological criteria levels were exceeded at Little Goose Dam over the past week in response to the TDG levels in the Lower Granite tailrace in excess of 125% this past

week and 130% the week before. However, most fish have been showing minor (Rank 1 and Rank 2) signs of GBT at the projects sampled. Snake River sites have shown that approximately 12% to 17% of the fish are showing minor signs of GBT. This is expected to decrease with decreasing TDG levels as flows recede.

Smolt Monitoring: Relatively large numbers of spring migrants continue to be collected at Smolt Monitoring Dams in the Snake River and Lower Columbia River. The indices for yearling Chinook and steelhead decreased at most sites, with the sharpest decrease occurring at Snake River dams. Sockeye, coho and subyearling Chinook indices increased at Lower Columbia River sites, while at Snake River dams sockeye and coho indices have begun to decrease.

At Lower Granite Dam, yearling Chinook indices averaged roughly 4,000 per day over the past week compared to 20,000 per day the previous week. Steelhead indices averaged 14,000 per day this week compared to 75,000 per day last week. Sockeye, coho indices were down at Lower Granite Dam as well as at other Snake River sites. Subyearling Chinook indices increased over the past week at Lower Granite Dam, and now subyearling Chinook predominate at the site, with the index higher than steelhead or yearling Chinook.

At Rock Island Dam indices were down for all species while at Lower Columbia sites yearling Chinook was the only species that declined while all other spring migrants continued to increase over the past two weeks. Subyearling Chinook indices rose most rapidly of all salmonids this past week, with the index at McNary Dam reaching 77,000 on May 31.

Adult Fish Passage: Adult Chinook counts at Bonneville Dam have varied over the last week between 350 and 1,045 adult spring Chinook. Adult spring Chinook counts to-date this year (96,456) are greater than the 2005 total to-date (74,038) but are still only 64% of the ten-year average. Spring Chinook jack counts at Bonneville Dam are 68% of that seen to-date in 2005 and 35% of the ten-year average. Daily adult steelhead passage numbers at Bonneville Dam have ranged between 54 and 73 over the last week.

A total of 21,062 spring Chinook were observed at Ice Harbor Dam, 97% and 43% of the 2005 count and ten-year average, respectively. A total of 6,678 adult spring Chinook have been detected at Priest Rapids Dam. This is 66% and 44% of the 2005 and ten-year average count to-date, respectively.

Hatchery Releases: In the Snake River basin roughly 1 million subyearling Chinook were released beginning May 25 and 26, split equally between Big Canyon Creek and Captain John acclimation facilities. In addition nearly 1 million more subs from Lyons Ferry Hatchery were scheduled to be released at Snake River basin sites by June 1. In the mid-Columbia River releases of summer steelhead were completed in the Okanogan River the last week of May. Also in the mid-Columbia, a volitional release of 3.5 million subyearling Chinook out of Ringold NFH scheduled to begin June 6 was instead begun May 25 due to disease concerns with some of the fish; the release is scheduled to be completed by June 9.

* See sampling comments

<http://www.fpc.org/currentDaily/smpcomments.htm>

Smolt indices, clipped & unclipped or combined, are presented in the following order: yearling chinook (chinook 1's), subyearling chinook (chinook 0's), steelhead, coho, and sockeye. Two classes of fish counts are shown in these tables: collection counts, which account for sample rates but are not adjusted for flow; and passage indices, which are collection counts divided by the proportion of water passing through the sampled powerhouse. Passage indices are not population estimates, but are used to adjust collection counts for daily fluctuations in the site's or project's operations. The classes of counts presented in the report are defined below for each site. Most samples occur over a 24-hr period that spans two calendar days. In this report, the date shown corresponds with the sample end date.

Definitions for Smolt Index Counts

WTB (Collection) = Salmon River Trap at Whitebird : Collection Counts

IMN (Collection) = Imnaha River Trap : Collection Counts

GRN (Collection) = Grande Ronde River Trap : Collection Counts

LEW (Collection) = Snake River Trap at Lewiston : Collection Counts

LGR (Index) = Lower Granite Dam Bypass Collection System : Passage Index Counts

Passage Index = Collection Counts / {Powerhouse Flow / (Powerhouse Flow + Spill)}

LGS (Index) = Little Goose Bypass Collection System : Passage Index Counts

Passage Index = Collection Counts / {Powerhouse Flow / (Powerhouse Flow + Spill)}

LMN (Index) = Lower Monumental Dam Bypass Collection System : Passage Index Counts

Passage Index = Collection Counts / {Powerhouse Flow / (Powerhouse Flow + Spill)}

RIS (Index) = Rock Island Dam Second Powerhouse Bypass Trap : Passage Index Counts

Passage Index = Collection Counts / {Powerhouse 2 Flow / (Powerhouse 1 & 2 Flow + Spill)}

MCN (Index) = McNary Dam Bypass Collection System : Passage Index Counts

Passage Index = Collection Counts / {Powerhouse Flow / (Powerhouse Flow + Spill)}

JDA (Index) = John Day Dam Bypass Collection System : Passage Index Counts

Passage Index = Collection Counts / {Powerhouse Flow / (Powerhouse Flow + Spill)}

BO2 (Index) = Bonneville Dam Second Powerhouse Bypass Collection System : Passage Index Counts

Passage Index = Collection Counts / {Powerhouse 2 Flow / (Powerhouse 1 & 2 Flow + Spill)}

JDA and BO2 data collected for the FPC by Pacific States Marine Fisheries Commission.

RIS data collected for the FPC by Chelan Co. PUD/Washington Dept. of Fish and Wildlife.

LGR, LMN, and MCN data collected for the FPC by Washington Dept. of Fish and Wildlife.

LGS and GRN data collected for the FPC by Oregon Dept. of Fish and Wildlife.

IMN data collected for the FPC by the Nez Perce Tribe.

BON and LGR have switched to video counts so the data is delayed.

*PRD is not posting wild steelhead numbers.

These numbers were collected from USACE, Grant PUD, Douglas PUD, Chelan PUD, ODFW and DART.

Wild steelhead numbers are included in the total. Wild Steelhead are defined as unclipped fish.

Historic counts (pre-1996) were obtained from CRITFC and compiled by the FPC.

Historic counts 1997 to present were obtained from the Corps of Engineers.

Page last updated on:

06/02/06

BON counts from January 1, 2006 to March 14, 2006 (our traditional counts begin March 15):

Chinook Adult	Chinook Jack	Steelhead	Wild Steelhead
1	0	2,516	238

Run Year counts (June 1, 2005 to May 31, 2006) for Lower Granite:

Steelhead
