

# Fish Passage Center

## Weekly Report #06 - 14

June 9, 2006

1827 NE 44th Ave., Suite 240  
Portland, OR 97213  
phone: 503/230-4099  
fax: 503/230-7559

### Summary of Events:

**Water Supply:** Precipitation throughout the Columbia Basin has varied between 73% and 124% of average at individual sub-basins over May. Precipitation above The Dalles over May has been 92% of average. Over the entire water year, precipitation has been average or above average at all list locations.

**Table 1. Summary of May precipitation and cumulative October through May precipitation with respect to average (1971-2000), at select locations within the Columbia and Snake River Basins.**

Location	Water Year 2006 May 1-29		Water Year 2006 October 1, 2005 to May 29	
	Observed (inches)	% Average	Observed (inches)	% Average
Columbia Above Coulee	1.88	90	19.75	110
Snake River Above Ice Harbor	1.41	80	17.16	127
Columbia Above The Dalles	1.70	92	19.99	112
Kootenai	2.06	99	21.07	114
Clark Fork	1.39	73	14.63	120
Flathead	1.88	82	18.98	118
Pend Oreille/Spokane	2.35	96	27.86	112
Central Washington	0.90	124	9.69	133
Snake River Plain	1.03	75	10.79	126
Salmon/Boise/Payette	1.26	75	21.99	137
Clearwater	2.81	99	26.64	111
SW Washington Cascades/Cowlitz	3.36	95	63.79	102
Willamette Valley	3.12	95	58.81	110

Table 2 displays the April Final, May Final, and June Final, runoff volume forecasts for multiple reservoirs. The June Final forecast at The Dalles between January and July is 111000 Kaf (103% of average).

**Table 2. April Final, May Final, and June Final Runoff Volume Forecasts for various reservoirs within the Columbia and Snake River Basins.**

Location	April Final		May Final		June Final	
	% Average (1971-2000)	Probable Runoff Volume (Kaf)	% Average (1971-2000)	Probable Runoff Volume (Kaf)	% Average (1971-2000)	Probable Runoff Volume (Kaf)
The Dalles (Jan-July)	100	107000	103	110000	103	111000
Grand Coulee (Jan-July)	96	60600	98	61900	101	63300
Libby Res. Inflow, MT (Jan-July)	96	6030	98	6160	101	6360
Hungry Horse Res. Inflow, MT (Jan-July)	99	2210	101	2250	106	2360
Lower Granite Res. Inflow (Apr-July)	118	25500	126	27100	124	26700
Brownlee Res. Inflow (Apr-July)	133	8380	143	9020	141	8910
Dworschak Res. Inflow (Apr-July)	96	2540	101	2670	106	2800

Snowpack within the Columbia Basin is diminishing. Snowpack in the Columbia River for basins above the Snake River confluence is 70% of average, for Snake River Basins the average snowpack is 35% of average, and for lower Columbia Basins between McNary and Bonneville Dam average snowpack is 64% of average.

Grand Coulee Reservoir is at 1278.3 feet (6-8-06) and has refilled 3.7 feet over the last week. Inflow has ranged from 196.3 to 210.0 Kcfs, while outflow has ranged 159.3 to 184.5 Kcfs.

The Libby Reservoir is currently at elevation 2455.7 feet (6-8-06) and refilled 5.1 feet last week. Outflows had been approximately 24.6 Kcfs for sturgeon flow operations but increased to 26.3 Kcfs on 6-8-06 with 2.2 Kcfs of spill. Inflow over the last week ranged from 33.6 to 43.8 Kcfs.

Hungry Horse is currently at an elevation of 3552.2 feet (6-8-06) and refilled 5.8 feet last week; outflows at Hungry Horse have increased from 4.0 to 6.7 Kcfs over the last week. Inflows ranged between 11.8 and 18.7 Kcfs over the same period.

Dworshak is currently at an elevation of 1589.1 feet (6-8-06) and refilled 5.4 feet last week; outflows at Dworshak have increased from 5.4 to 9.6 Kcfs over the last week. Inflows ranged between 14.1 and 16.9 Kcfs over the same period.

The Brownlee Reservoir was at an elevation of 2076.4 feet on June 8th, 2006 (refilled 1.1 feet last week). Outflows at Hells Canyon have ranged between 24.6 and 31 Kcfs over the last week.

The Biological Opinion flow period began on April 3rd in the lower Snake River (Lower Granite) and on April 10th in the mid (Priest Rapids) and lower (McNary) Columbia River. According to the last Water Supply Forecast (April Final), the flow objectives this spring will be 100 Kcfs at Lower Granite, 260 Kcfs at McNary, and 135 Kcfs at Priest Rapids. Flows at Lower Granite have averaged 130.1 Kcfs over the season and were 118.5 Kcfs last week; flows at McNary have averaged 331.4 Kcfs over the season and were 340.2 Kcfs last week; and flows at Priest Rapids have averaged 183.4 Kcfs over the season and were 224.4 Kcfs last week.

**Spill:** No spill occurred at Dworshak Dam over the past week. Spill operations for fish passage at the Lower Snake River projects began on April 3, 2006 in accordance with the December 29, 2005 District Court Order and Opinion. Spill at Lower Granite, Little Goose, Lower Monumental and Ice Harbor dams averaged 33%, 27%, 23% and 56% of average daily flow over the past week, respectively. Spill at Lower Granite Dam exceeded the Court Order because of the limited hydraulic capacity at that project. At Little Goose Dam, the COE has set a spill cap of 21 Kcfs, which is less than the 30% Court Order, based on the TDG in the Lower Monumental Dam forebay. However, while spill is limited during the daytime hours, spill increases substantially during nighttime hours due to lack of market, or overgeneration spill. This same operation is being implemented at Lower Monumental Dam, with spill limited whenever possible but increased overnight for passage of overgeneration spill. Spill at Ice Harbor Dam is exceeding the Court Order.

Spill for fish passage began on April 10 at Lower Columbia River projects. Continued high flows have occurred in the lower Columbia over the past week and uncontrolled spill levels were observed. Spill at McNary, John Day, The Dalles and Bonneville dams was 54%, 40%, 41% and 36% of average daily flow, respectively. McNary Dam has been exceeding the requirements of the Court's Order. John Day Dam is being operated with a limited hydraulic capacity and spill is being provided at a more flat spill over 24 hours that has varied between 32% and 45% of daily average. Spill at The Dalles Dam is being limited during daytime hours to about 30% of instantaneous flow, but exceeds 70% of instantaneous flow during nighttime hours. Spill at Bonneville Dam has exceeded the Court Order over the past week.

High flows have resulted in total dissolved gas levels that have exceeded the TDG waiver limits at most forebay locations over the past week. Sampled fish are showing signs of GBT at some projects, but action criteria are not being exceeded. Most fish affected have been showing minor (Rank 1 and Rank 2) signs of GBT at the projects sampled.

**Smolt Monitoring:** The numbers of spring migrants in the collection at all SMP sites decreased over the past week, while subyearling Chinook indices increased at all sites except McNary Dam.

At Lower Granite Dam, subyearling Chinook indices averaged roughly 31,000 per day over the past week compared to 16,000 per day the previous week, while at Little Goose and Lower Monumental subyearling average indices were up to 30,000 and 11,000 respectively.

At Rock Island Dam indices for subyearlings averaged 130 per day this week compared to 50 per day last week. By contrast, at McNary Dam, subyearling indices were down, averaging 26,000 this week compared to 49,000 over the previous week. At John Day and Bonneville dams, subyearling indices were up, with the index at John Day averaging 15,000 per day this week compared to 10,000 last week, and the Bonneville index averaging nearly 11,000 this week compared to just over 4,000 last week.

**Adult Fish Passage** -At Bonneville Dam, traditional counting of adult summer Chinook began on June 1st. The weekly count averaged 1,255 fish/day through the week ending June 7th with the total at 8,202 through June 7th. This total is about 92% and 106% of the respective 2005 and 10-year average. The peak daily count was 1,435 on June 6th, with the low count of 952 on June 2nd. The adult summer Chinook count total at The Dalles Dam was 3,924. Above McNary Dam, the split of adult Chinook into the Snake River was near 21,062 (Ice Harbor count) with 7,689 into the upper Mid-Columbia (Priest Rapids count).

At Bonneville Dam, the average daily steelhead count for the week was 102 per day. Adult sockeye salmon continue passing Bonneville with the count through June 7 at 303, about 66% and 43% of the respective 2005 and 10-year average count.

Approximately 1.2 million adult Shad have been counted at Bonneville Dam this season with daily counts between 31,000 and 245,000 for the week.

**Hatchery Releases:** In the Snake River basin a release of 500,000 subyearling Chinook began June 8 from the Nez Perce Tribal Hatchery. The release is scheduled to be completed June 15. Another release of 550,000 subyearlings, from the NPT Hatchery, is scheduled for next week. The only other ongoing release is a volitional release of 3.5 million subyearling Chinook out of Ringold NFH in the Mid- Columbia, which began May 25 and is due to be completed by June 9. In the next few weeks Priest Rapids Hatchery is scheduled to release roughly 5.6 million subyearlings also.

<http://www.fpc.org/currentDaily/smpcomments.htm>

Smolt indices, clipped & unclipped or combined, are presented in the following order: yearling chinook (chinook 1's), subyearling chinook (chinook 0's), steelhead, coho, and sockeye. Two classes of fish counts are shown in these tables: collection counts, which account for sample rates but are not adjusted for flow; and passage indices, which are collection counts divided by the proportion of water passing through the sampled powerhouse. Passage indices are not population estimates, but are used to adjust collection counts for daily fluctuations in the site's or project's operations. The classes of counts presented in the report are defined below for each site. Most samples occur over a 24-hr period that spans two calendar days. In this report, the date shown corresponds with the sample end date.

### Definitions for Smolt Index Counts

WTB (Collection) = Salmon River Trap at Whitebird : Collection Counts

IMN (Collection) = Imnaha River Trap : Collection Counts

GRN (Collection) = Grande Ronde River Trap : Collection Counts

LEW (Collection) = Snake River Trap at Lewiston : Collection Counts

LGR (Index) = Lower Granite Dam Bypass Collection System : Passage Index Counts

Passage Index = Collection Counts / {Powerhouse Flow / (Powerhouse Flow + Spill)}

LGS (Index) = Little Goose Bypass Collection System : Passage Index Counts

Passage Index = Collection Counts / {Powerhouse Flow / (Powerhouse Flow + Spill)}

LMN (Index) = Lower Monumental Dam Bypass Collection System : Passage Index Counts

Passage Index = Collection Counts / {Powerhouse Flow / (Powerhouse Flow + Spill)}

RIS (Index) = Rock Island Dam Second Powerhouse Bypass Trap : Passage Index Counts

Passage Index = Collection Counts / {Powerhouse 2 Flow / (Powerhouse 1 & 2 Flow + Spill)}

MCN (Index) = McNary Dam Bypass Collection System : Passage Index Counts

Passage Index = Collection Counts / {Powerhouse Flow / (Powerhouse Flow + Spill)}

JDA (Index) = John Day Dam Bypass Collection System : Passage Index Counts

Passage Index = Collection Counts / {Powerhouse Flow / (Powerhouse Flow + Spill)}

BO2 (Index) = Bonneville Dam Second Powerhouse Bypass Collection System : Passage Index Counts

Passage Index = Collection Counts / {Powerhouse 2 Flow / (Powerhouse 1 & 2 Flow + Spill)}

JDA and BO2 data collected for the FPC by Pacific States Marine Fisheries Commission.

RIS data collected for the FPC by Chelan Co. PUD/Washington Dept. of Fish and Wildlife.

LGR, LMN, and MCN data collected for the FPC by Washington Dept. of Fish and Wildlife.

LGS and GRN data collected for the FPC by Oregon Dept. of Fish and Wildlife.

IMN data collected for the FPC by the Nez Perce Tribe.

BON and LGR have switched to video counts so the data is delayed.

\*PRD is not posting wild steelhead numbers.

These numbers were collected from USACE, Grant PUD, Douglas PUD, Chelan PUD, ODFW and DART.

Wild steelhead numbers are included in the total. Wild Steelhead are defined as unclipped fish.

Historic counts (pre-1996) were obtained from CRITFC and compiled by the FPC.

Historic counts 1997 to present were obtained from the Corps of Engineers.

Page last updated on:
