

Fish Passage Center Weekly Report #06 - 25

August 25, 2006

1827 NE 44th Ave., Suite 240
Portland, OR 97213
phone: 503/230-4099
fax: 503/230-7559

Summary of Events:

Water Supply: Precipitation throughout the Columbia Basin has varied between 2% and 59% of average at individual sub-basins over the first three weeks of August. Precipitation above The Dalles over August has been 45% of average. Over the entire water year, precipitation has been average or above average at all list locations.

Table 1. Summary of August precipitation and cumulative October through August precipitation with respect to average (1971-2000), at select locations within the Columbia and Snake River Basins.

Location	Water Year 2006 Aug 1-21		Water Year 2006 October 1, 2005 to August 21, 2006	
	Observed (inches)	% Average	Observed (inches)	% Average
Columbia Above Coulee	0.62	54	24.14	103
SNAKE RIVER ABOVE ICE HARBOR	0.26	45	19.29	116
Columbia Above The Dalles	0.36	45	23.19	107
Kootenai	0.56	49	25.77	107
Clark Fork	0.48	54	17.79	109
Flathead	0.64	59	23.81	111
Pend Oreille/Spokane	0.39	45	32.37	110
Central Washington	0.01	2	11.04	129
SNAKE RIVER PLAIN	0.09	24	12.17	115
Salmon/Boise/Payette	0.14	30	24.12	128
Clearwater	0.48	59	30.24	104
SW Washington Cascades/Cowlitz	0.06	6	66.49	98
Willamette Valley	0.02	3	61.3	107

Table 2 displays the May Final, June Final, and July Final runoff volume forecasts for multiple reservoirs. The July Final forecast at The Dalles between January and July is 114000 Kaf (106% of average).

Table 2. May Final, June Final, and July Final Runoff Volume Forecasts for various reservoirs within the Columbia and Snake River Basins.

Location	May Final		June Final		July Final	
	% Average (1971- 2000)	Probable Runoff Volume (Kaf)	% Average (1971- 2000)	Probable Runoff Volume (Kaf)	% Average (1971- 2000)	Probable Runoff Volume (Kaf)
The Dalles (Jan-July)	103	110000	103	111000	106	114000
Grand Coulee (Jan-July)	98	61900	101	63300	106	66900
Libby Res. Inflow, MT (Jan-July)	98	6160	101	6360	113	7120
Hungry Horse Res. Inflow, MT (Jan-July)	101	2250	106	2360	109	2430
Lower Granite Res. Inflow (Apr-July)	126	27100	124	26700	116	25100
Brownlee Res. Inflow (Apr-July)	143	9020	141	8910	138	8710
Dworshak Res. Inflow (Apr-July)	101	2670	106	2800	105	2770

Grand Coulee Reservoir is at 1281.1 feet (8-24-06) and has drafted 0.8 feet over the last week. Grand Coulee's end of August draft target is 1280 feet. Outflow has ranged between 65.4 and 128.8 Kcfs.

The Libby Reservoir is currently at elevation 2445.7 feet (8-24-06) and drafted 2.1 feet last week. Outflows are currently 14.1 Kcfs.

Hungry Horse is currently at an elevation of 3547.6 feet (8-24-06) and has drafted approximately 1.1 feet in the last week. Hungry Horse outflows have been approximately 3.1 Kcfs.

Dworshak is currently at an elevation of 1538.6 feet (8-24-06) and drafted approximately 7.3 feet last week. Outflows at Dworshak dropped to 7.6 Kcfs on August 23rd and are expected to stay at this outflow until the end of August.

The Brownlee Reservoir was at an elevation of 2056.9 feet on Aug 24th, 2006. Outflows at Hells Canyon have ranged between 9.5 and 15.2 Kcfs over the last week.

According to the June Final Water Supply Forecast, the flow objective this summer is 54.5 Kcfs at Lower Granite (began 6-21-06) and 200 Kcfs at McNary (began 7-1-06). From June 21 to August 24 flows have averaged 39.0 Kcfs at Lower Granite, over the last week flows have averaged 28.2 Kcfs at Lower Granite. Between July 1 and Aug 24, flows at McNary have averaged 168.5 Kcfs; over the last week flows have averaged 146.7 Kcfs.

Smolt Monitoring: Subyearling Chinook salmon predominate in the run at all sites as they have for the past several weeks. Small numbers of spring migrants continue to be detected in the system. Subyearling indices decreased at almost all sites over the past week.

At Lower Granite Dam, subyearling Chinook indices averaged roughly 100 per day over the past week compared to 175 per day the previous week, while at Little Goose and Lower Monumental Dam the subyearling index averaged 50 and 10 (respectively) per day this week.

At Rock Island Dam indices for subyearlings averaged 40 per day this week compared to 50 per day last week. At McNary Dam, subyearling

indices were down, averaging 1,800 this week compared to 3,700 per day over the previous week. At John Day Dam, where sampling is limited to every other day due to high temperatures, subyearling indices averaged 1,200 per day this week compared to 1,100 per day last week. At Bonneville Dam subyearling indices decreased with this weeks' average index at 900 per day, compared to 1,400 fish per day last week. Bonneville sampling has also been altered due to high temperatures. When temperatures are at or above 70, sampling crews will work up fish more frequently to reduce holding time at the site.

Spill: No spill has occurred at Dworshak Dam over the past week. Summer spill began on June 21 for Lower Snake River projects in accordance with the December 29, 2005 District Court Order and Opinion. Spill at Lower Granite, Little Goose, Lower Monumental, and Ice Harbor dams averaged 58%, 30%, 55%, and 65%, of average daily flow over the past week, respectively. Spill at Lower Granite was provided as the flow in excess of that needed to operate one turbine unit at this project. Little Goose Dam met the Court's Order for spill this past week. Spill at Lower Monumental Dam was provided as the excess flow above that needed for project minimum powerhouse flows. Ice Harbor Dam was also spilling all water above project minimum powerhouse flows.

Summer spill for fish passage was initiated on July 1 at the Lower Columbia River projects. Spill at McNary, John Day, The Dalles, and Bonneville dams was 50%, 30%, 40%, and 62% of average daily flow, respectively. McNary, John Day, and The Dalles dams met the Court's order last week. Spill at Bonneville Dam met the Court's order of 75 Kcfs for day time spill for all days this last week, while the Court's Order of spilling to the gas cap was limited due to project minimum flows. All water above project minimum flow was spilled. Total dissolved gas levels have met the TDG waiver requirements over the past week. No fish were observed with signs of GBT over the past week.

Adult Fish Passage: At Bonneville dam, daily counts of fall Chinook began on August 1st, over the last week daily counts have ranged between 472 and 2103 fish. As of August 24th, 16,742 fall Chinook had passed Bonneville Dam, which is 107% of the 2005 count on the same date and 69% of the ten year average. Daily counts at Rock Island Dam ranged between 112 and 187 fall Chinook during the last week.

At Bonneville Dam, steelhead counts averaged 4,487 per day between August 18th and August 24th. Through August 24th, the steelhead run at Bonneville Dam was 174,046 fish, 93% and 87% of the respective 2005 and 10-year average counts. The daily counts at The Dalles Dam ranged between 678 and 3,182 for the week with the cumulative steelhead count through August 24th at 47,145. About 20% of the steelhead counted at Bonneville Dam has passed The Dalles Dam. The majority of the 20,770 steelhead counted at McNary Dam have moved up into the Snake River with the cumulative count at Ice Harbor Dam now at 9,921 for the season. The cumulative count at Rock Island Dam is 2,199 for the season.

Adult sockeye salmon passage at Bonneville Dam averaged less than one fish per day through the week with the count at Bonneville through August 24th at 37,053, about 51% and 62% of the respective 2005 and 10-year average counts. About 34,888 of the adult sockeye have been counted at Rock Island Dam. One of the major spawning sites for the sockeye is Lake Wenatchee with the other site at Lake Osoyoos (Okanogan basin). To date, 51 sockeye have been counted into the Snake River.

Hatchery Releases: No hatchery releases are scheduled through the end of August.

* See sampling comments <http://www.fpc.org/currentDaily/smpcomments.htm>

Smolt indices, clipped & unclipped or combined, are presented in the following order: yearling chinook (chinook 1's), subyearling chinook (chinook 0's), steelhead, coho, and sockeye. Two classes of fish counts are shown in these tables: collection counts, which account for sample rates but are not adjusted for flow; and passage indices, which are collection counts divided by the proportion of water passing through the sampled powerhouse. Passage indices are not population estimates, but are used to adjust collection counts for daily fluctuations in the site's or project's operations. The classes of counts presented in the report are defined below for each site. Most samples occur over a 24-hr period that spans two calendar days. In this report, the date shown corresponds with the sample end date.

Definitions for Smolt Index Counts

- WTB (Collection) = Salmon River Trap at Whitebird : Collection Counts
- IMN (Collection) = Imnaha River Trap : Collection Counts
- GRN (Collection) = Grande Ronde River Trap : Collection Counts
- LEW (Collection) = Snake River Trap at Lewiston : Collection Counts
- LGR (Index) = Lower Granite Dam Bypass Collection System : Passage Index Counts
 $\text{Passage Index} = \text{Collection Counts} / \{ \text{Powerhouse Flow} / (\text{Powerhouse Flow} + \text{Spill}) \}$
- LGS (Index) = Little Goose Bypass Collection System : Passage Index Counts
 $\text{Passage Index} = \text{Collection Counts} / \{ \text{Powerhouse Flow} / (\text{Powerhouse Flow} + \text{Spill}) \}$
- LMN (Index) = Lower Monumental Dam Bypass Collection System : Passage Index Counts
 $\text{Passage Index} = \text{Collection Counts} / \{ \text{Powerhouse Flow} / (\text{Powerhouse Flow} + \text{Spill}) \}$
- RIS (Index) = Rock Island Dam Second Powerhouse Bypass Trap : Passage Index Counts
 $\text{Passage Index} = \text{Collection Counts} / \{ \text{Powerhouse 2 Flow} / (\text{Powerhouse 1 \& 2 Flow} + \text{Spill}) \}$
- MCN (Index) = McNary Dam Bypass Collection System : Passage Index Counts
 $\text{Passage Index} = \text{Collection Counts} / \{ \text{Powerhouse Flow} / (\text{Powerhouse Flow} + \text{Spill}) \}$
- JDA (Index) = John Day Dam Bypass Collection System : Passage Index Counts
 $\text{Passage Index} = \text{Collection Counts} / \{ \text{Powerhouse Flow} / (\text{Powerhouse Flow} + \text{Spill}) \}$
- BO2 (Index) = Bonneville Dam Second Powerhouse Bypass Collection System : Passage Index Counts
 $\text{Passage Index} = \text{Collection Counts} / \{ \text{Powerhouse 2 Flow} / (\text{Powerhouse 1 \& 2 Flow} + \text{Spill}) \}$

JDA and BO2 data collected for the FPC by Pacific States Marine Fisheries Commission.
 RIS data collected for the FPC by Chelan Co. PUD/Washington Dept. of Fish and Wildlife.
 LGR, LMN, and MCN data collected for the FPC by Washington Dept. of Fish and Wildlife.
 LGS and GRN data collected for the FPC by Oregon Dept. of Fish and Wildlife.
 IMN data collected for the FPC by the Nez Perce Tribe.

BON and LGR have switched to video counts so the data is delayed.

*PRD is not posting wild steelhead numbers.

These numbers were collected from USACE, Grant PUD, Douglas PUD, Chelan PUD, ODFW and DART.

Wild steelhead numbers are included in the total. Wild Steelhead are defined as unclipped fish.

Historic counts (pre-1996) were obtained from CRITFC and compiled by the FPC.

Historic counts 1997 to present were obtained from the Corps of Engineers.

Page last updated on: 08/25/06

BON counts from January 1, 2006 to March 14, 2006 (our traditional counts begin March 15):

Chinook Adult	Chinook Jack	Steelhead	Wild Steelhead
1	0	2,516	238

Run Year counts (June 1, 2005 to May 31, 2006) for Lower Granite:

Steelhead
1,922
