

Fish Passage Center Weekly Report #07 - 24

August 17, 2007

1827 NE 44th Ave., Suite 240
Portland, OR 97213
phone: 503/230-4099
fax: 503/230-7559

Summary of Events:

Water Supply: Precipitation throughout the Columbia Basin has varied between 0% and 51% of average at individual sub-basins over the first one-half of August. Precipitation above The Dalles has been 35% of average over August. Over the entire water year, precipitation has varied between 71% and 104% of average at individual sub-basins.

Table 1. Summary of August precipitation and cumulative October through August precipitation with respect to average (1971-2000), at select locations within the Columbia and Snake River Basins.

Location	Water Year 2007 August 1-13		Water Year 2007 October 1, 2006 to August 13, 2007	
	Observed (inches)	% Average	Observed (inches)	% Average
Columbia Above Coulee	0.25	35	22.95	100
SNAKE RIVER ABOVE ICE HARBOR	0.18	49	12.63	77
Columbia Above The Dalles	0.17	35	20.32	95
Kootenai	0.21	29	24.51	104
Clark Fork	0.11	21	15.22	95

Willamette Valley	0.01	2	57.45	100

Grand Coulee Reservoir is at 1281.3 feet (8-16-07) and drafted 2.5 feet last week. Outflows at Grand Coulee ranged between 100.5 and 140.4 Kcfs last week. The summer end of August draft limit at Grand Coulee is 1278 feet.

Dworshak is currently at an elevation of 1548.9 feet (8-16-07) and drafted 6.3 feet last week. Outflows at Dworshak have been approximately 7.9 Kcfs.

The Libby Reservoir is currently at elevation 2445.0 feet (8-16-07) and drafted 2.6 feet last week. Outflows at Libby are currently at 17.3 Kcfs and will remain at this level through August.

Hungry Horse is currently at an elevation of 3547.3 feet (8-16-07) and drafted 2.0 feet last week. Outflows at Hungry Horse are currently at 4.4 Kcfs and will remain at this level through August.

The Brownlee Reservoir was at an elevation of 2055.2 feet on August 16th, 2007, drafting 1.4 feet last week. Outflows at Brownlee Dam have been 8.6 to 12.5 Kcfs over the last week.

The summer Biological Opinion flow objective at McNary Dam is 200 Kcfs this year. Flows at McNary Dam have averaged 172.6 Kcfs over the summer season to date and 160.6 Kcfs last week.

The summer Biological Opinion flow at Lower Granite Dam is 50 Kcfs this year. Flows at Lower Granite Dam have averaged 30.7 Kcfs over the summer season to date and 24.4 Kcfs last week.

Spill: In accordance with the Court Order, summer spill was initiated at the Snake River Projects at 0001 hours on June 21, 2007. The Court Order calls for the following spill levels at the Federal Snake River Projects:

Project	Day/Night Spill
Lower Granite	18Kcfs/18Kcfs
Little Goose	30%/30%
Lower Monumental	17Kcfs/17Kcfs
Ice Harbor	45Kcfs/Gas Cap Study

In general, the lower Snake River projects have been meeting the Court Order. The Court Order allows for the operation of one turbine unit at each of the Snake River projects. This minimum operation of one turbine unit and the low flow results in hours where the specified spill targets at each project cannot be achieved. A planned line outage at Little Goose Dam over the past several days resulted in a powerhouse flow of 5 Kcfs with all additional flow being spilled. The project capacity should increase to one unit later today.

Court ordered summer spill at the lower Columbia projects began on July 1, 2007. The Court Order calls for the following spill levels at the Federal Lower Columbia River Projects:

Project	Day/Night Spill
McNary	40%/40% vs 60%/60%
John Day	30%/30%
The Dalles	40%/40%
Bonneville	85Kcfs/gas cap until July 15 75Kcfs/gas cap July 16 -Aug31

Spill at McNary Dam is alternating 60% of instantaneous flow and 40% of instantaneous flow in 2 day blocks, which the project has met over the past week. Summer spill at John Day Dam is 30% of instantaneous flow, an objective that the project has met over the past week. According to the court order, summer spill at The Dalles Dam is that same as was seen in the spring, 40% of instantaneous flow for 24 hours. The Dalles Dam has met this objective over the past week.

On June 20th the summer spill program was initiated at Bonneville Dam for research purposes,

which was to be implemented until July 15. On July 16 the project reverted to the Court's Order of 75 Kcfs during daytime hours and gas cap spill at night. During the past week, the gas cap spill level was reduced since TDG at the Camas/Washougal monitor exceeded the 115% TDG on August 1 and 2, but gradually increased over the week as temperatures cooled.

Total dissolved gas waivers were not exceeded at the federal hydroprojects throughout the past week, except for the two days at the Camas/Washougal gage. Gas bubble trauma (GBT) monitoring continued this week at Little Goose, Lower Monumental, McNary, Rock Island and Bonneville dams. Only one fish with minor signs of GBT was observed at Rock Island Dam this past week.

Smolt Monitoring: Subyearling indices decreased this past week at all SMP sites. Steelhead smolts continue to show up at Lower Snake River dams this year well beyond the end of their active migration season. Particularly at Little Goose Dam these fish are occurring in numbers equal to or greater than subyearling Chinook, which is very unusual. Likely the very low flows have delayed these fish. What few PIT-tagged fish there are suggest that travel times between Lower Granite Dam and Little Goose Dam, for steelhead, at this time of year are very long, taking up to two months.

At Lower Granite Dam, there was a decrease in the average subyearling passage index, with the average this week at 150 per day compared to 200 per day last week. Indices of subyearling Chinook decreased at Little Goose and Lower Monumental dams this past week.

At Rock Island Dam, the subyearling index was down this past week, averaging 92 per day this week compared to 135 per day last week.

In the Lower Columbia, at McNary Dam, numbers of subyearling Chinook were relatively high again this week, with the index averaging 26,000 this week compared to 44,000 last week. While at John Day and Bonneville dams, sampling has been reduced due to high temperatures in the river. John Day SMP crews sample twice a week at temperatures exceeding 70 degrees F, while the

Bonneville SMP switches to every other day sampling. The weekly average subyearling index fell reflecting the decreasing passage of subyearling Chinook through the lower River. The index at John Day Dam averaged 14,800 compared to 22,600 last week. At Bonneville Dam the index averaged 5,000 this week compared to 7,400 per day last week.

Hatchery Release:

Snake River Zone: The Snake River Zone encompasses the Snake River and its tributaries from its confluence with the Columbia River to Hells Canyon Dam. There were no releases scheduled for the Snake River Zone this week nor are there any releases scheduled for this zone over the next two weeks.

Mid-Columbia Zone: The Mid-Columbia Zone encompasses the area of the Columbia River and its tributaries from McNary Dam to Chief Joseph Dam. There were no releases of juvenile salmonids scheduled for the Mid-Columbia River Zone this week. Furthermore, there are no releases scheduled for this zone over the next two weeks.

Lower Columbia Zone: The Lower Columbia Zone is defined as the Columbia River and its tributaries from Bonneville Dam to McNary Dam. There were no scheduled releases into the Lower Columbia River Zone over the past week and are no scheduled releases over the next two weeks.

Adult Fish Passage: At Bonneville dam, daily counts for fall Chinook began on August 1st. As of August 16th, 7,452 fall Chinook adults and 1,352 jacks had passed Bonneville Dam. This season, the 2007 Bonneville fall Chinook count has 32 more Chinook than the 2006 count and is about 82.5 percent of the 10-year average. Daily counts for adult fall Chinook began August 4th at The Dalles Dam. Daily fall Chinook totals ranged from 235 to 472 at The Dalles Dam as of August 16th, with a total count of 3,619. A total of 33,008 summer Chinook have passed McNary Dam for the season. The 2007 McNary summer Chinook count was about 52.7 percent of the 2006 count and 61.1

percent of the 10-year average. The adult summer Chinook count at Lower Granite Dam is counted through August 18th. As of August 16th, 7,671 summer Chinook adults had been counted at Lower Granite Dam. The 2007 adult summer Chinook count at Rock Island Dam in the upper Columbia River was 28,008 with daily totals ranging from 98 to 199.

As of August 16th, 165,877 steelhead had passed Bonneville Dam which was 1.21 times greater than the 2006 count. The 2007 Bonneville steelhead count was about 93.8 percent of the 10-year average. The daily steelhead counts at The Dalles Dam ranged between 1,378 and 2,496 for the week with the cumulative count of 53,670. About 32.3 percent of the steelhead counted at Bonneville has passed The Dalles Dam. The majority of the 28,032 steelhead counted at McNary Dam have moved up into the Snake River with the cumulative count at Ice Harbor now at 11,251 for the season. The cumulative count at Priest Rapids was at 2,974 for the season.

Adult sockeye counts at Bonneville were at 24,362 as of August 16th. This year's sockeye count is about 65.7 percent of the 2006 count and 40.0 percent of the 10-year average count. About 24,614 of the adult sockeye have been counted at Priest Rapids Dam. This year's count is about 92.1 percent of the 2006 adult sockeye count at Priest Rapids Dam and 42.2 percent of the 10-year average. Two of the major spawning sites for sockeye are Lake Wenatchee and Lake Ososyoos (Okanogan basin). To date, only 55 sockeye have been counted at Ice Harbor Dam in the Snake River.

The coho salmon run at Bonneville is just beginning with 120 adults and 29 jacks counted to date. Four chum and 2 pink salmon have been observed at Bonneville Dam so far this season.

* See sampling comments <http://www.fpc.org/currentDaily/smpcomments.htm>

Smolt indices, clipped & unclipped or combined, are presented in the following order: yearling chinook (chinook 1's), subyearling chinook (chinook 0's), steelhead, coho, and sockeye. Two classes of fish counts are shown in these tables: collection counts, which account for sample rates but are not adjusted for flow; and passage indices, which are collection counts divided by the proportion of water passing through the sampled powerhouse. Passage indices are not population estimates, but are used to adjust collection counts for daily fluctuations in the site's or project's operations. The classes of counts presented in the report are defined below for each site. Most samples occur over a 24-hr period that spans two calendar days. In this report, the date shown corresponds with the sample end date.

Definitions for Smolt Index Counts

- WTB (Collection) = Salmon River Trap at Whitebird : Collection Counts
- IMN (Collection) = Imnaha River Trap : Collection Counts
- GRN (Collection) = Grande Ronde River Trap : Collection Counts
- LEW (Collection) = Snake River Trap at Lewiston : Collection Counts
- LGR (Index) = Lower Granite Dam Bypass Collection System : Passage Index Counts
 $\text{Passage Index} = \text{Collection Counts} / \{ \text{Powerhouse Flow} / (\text{Powerhouse Flow} + \text{Spill}) \}$
- LGS (Index) = Little Goose Bypass Collection System : Passage Index Counts
 $\text{Passage Index} = \text{Collection Counts} / \{ \text{Powerhouse Flow} / (\text{Powerhouse Flow} + \text{Spill}) \}$
- LMN (Index) = Lower Monumental Dam Bypass Collection System : Passage Index Counts
 $\text{Passage Index} = \text{Collection Counts} / \{ \text{Powerhouse Flow} / (\text{Powerhouse Flow} + \text{Spill}) \}$
- RIS (Index) = Rock Island Dam Second Powerhouse Bypass Trap : Passage Index Counts
 $\text{Passage Index} = \text{Collection Counts} / \{ \text{Powerhouse 2 Flow} / (\text{Powerhouse 1 \& 2 Flow} + \text{Spill}) \}$
- MCN (Index) = McNary Dam Bypass Collection System : Passage Index Counts
 $\text{Passage Index} = \text{Collection Counts} / \{ \text{Powerhouse Flow} / (\text{Powerhouse Flow} + \text{Spill}) \}$
- JDA (Index) = John Day Dam Bypass Collection System : Passage Index Counts
 $\text{Passage Index} = \text{Collection Counts} / \{ \text{Powerhouse Flow} / (\text{Powerhouse Flow} + \text{Spill}) \}$
- BO2 (Index) = Bonneville Dam Second Powerhouse Bypass Collection System : Passage Index Counts
 $\text{Passage Index} = \text{Collection Counts} / \{ \text{Powerhouse 2 Flow} / (\text{Powerhouse 1 \& 2 Flow} + \text{Spill}) \}$

JDA and BO2 data collected for the FPC by Pacific States Marine Fisheries Commission.
 RIS data collected for the FPC by Chelan Co. PUD/Washington Dept. of Fish and Wildlife.
 LGR, LMN, and MCN data collected for the FPC by Washington Dept. of Fish and Wildlife.
 LGS and GRN data collected for the FPC by Oregon Dept. of Fish and Wildlife.
 IMN data collected for the FPC by the Nez Perce Tribe.

PRD does not post wild steelhead numbers.

These numbers were collected from USACE, Grant PUD, Douglas PUD, Chelan PUD, ODFW and DART.

Wild steelhead numbers are included in the total. Wild Steelhead are defined as unclipped fish.

Historic counts (pre-1996) were obtained from CRITFC and compiled by the FPC.

Historic counts 1997 to present were obtained from the Corps of Engineers.

Page last updated on: 08/17/07

BON counts from January 1, 2006 to March 14, 2006 (our traditional counts begin March 15):

Year	Chinook Adult	Chinook Jack	Steelhead	Wild Steelhead
2007	22	0	1,677	517
2006	2	0	2,523	239
