

# Fish Passage Center Weekly Report #08 - 08

April 25, 2008

1827 NE 44th Ave., Suite 240  
Portland, OR 97213  
phone: 503/230-4099  
fax: 503/230-7559

## Summary of Events:

**Water Supply:** Precipitation throughout the Columbia Basin has varied between 19% and 76% of average at individual sub-basins over April. Precipitation above The Dalles has been 59% of average over April. Over the entire water year, precipitation has generally been near or above average.

**Table 1. Summary of April precipitation and cumulative October through April precipitation with respect to average (1971-2000), at select locations within the Columbia and Snake River Basins.**

Location	Water Year 2008 April 1-21		Water Year 2008 October 1, 2007 to April 1-21, 2008	
	Observed (inches)	% Average	Observed (inches)	% Average
	Columbia Above Coulee	0.74	64	15.74
SNAKE RIVER ABOVE ICE HARBOR	0.42	41	11.74	104
Columbia Above The Dalles	0.59	51	15.72	102
Kootenai	0.81	66	15.24	96
Clark Fork	0.42	48	10.61	108
Flathead	0.68	61	12.87	97
Pend Oreille/Spokane	0.98	62	22.95	105
Central Washington	0.11	25	4.67	74
SNAKE RIVER PLAIN	0.14	19	5.74	84
Salmon/Boise/Payette	0.38	34	14.68	106
Clearwater	1.20	65	21.15	106
SW Washington Cascades/Cowlitz	2.40	64	53.21	93
Willamette Valley	2.57	76	49.26	101

Snowpack within the Columbia Basin is above average. Average snowpack in the Columbia River for basins above the Snake River confluence is 109% of average, for Snake River Basins the

average snowpack is 114% of average, and for lower Columbia Basins between McNary and Bonneville Dam average snowpack is 195% of average.

Table 2 displays the April Final and April Mid Month runoff volume forecasts for multiple reservoirs. Water Supply Forecasts generally stayed the same or decreased between the April Final and April Mid Month forecasts, with the exception of Dworshak which increased 8%. The current forecast (April Final) at The Dalles between January and July is 101000 Kaf (94% of average).

Location	April Final		April Mid Month	
	% Average (1971- 2000)	Probable Runoff Volume (Kaf)	% Average (1971- 2000)	Probable Runoff Volume (Kaf)
The Dalles (Jan-July)	94	101000	92	98200
Grand Coulee (Jan-July)	97	61200	99	59900
Libby Res. Inflow, MT (Jan-July)	96	6080	98	6010
Hungry Horse Res. Inflow, MT (Jan-July)	96	2140	94	2090
Lower Granite Res. Inflow (Apr- July)	108	23300	105	22600
Brownlee Res. Inflow (Apr-July)	86	5400	79	4990
Dworshak Res. Inflow (Apr-July)	120	3160	118	3110

The Biological Opinion flow period began on April 3rd in the lower Snake River (Lower Granite) and began on April 10th in the mid (Priest Rapids) and lower (McNary) Columbia River. According to the April Final Water Supply Forecast, the flow objectives this spring are 100 Kcfs at Lower Granite, 260 Kcfs at McNary, and 135 Kcfs at Priest Rapids. Flows at Lower Granite Dam from April 18-24 have averaged 60.6 Kcfs, flows at Priest Rapids from April 18th to 24th averaged 94.6 Kcfs and at McNary 166.1 Kcfs over the same date range.

Grand Coulee Reservoir is at 1235.4 feet (4-24-08) and has drafted 3.8 feet in the last week. The end of April FC elevation at Grand Coulee based on the new April Final forecast is 1228.8 feet. Outflows at Grand Coulee have ranged between 69.0 and 112.9 Kcfs over the last week.

The Libby Reservoir is currently at elevation 2395.48 feet (4-24-08) and held steady last week. The end of April FC elevation at Libby based on the new April Final forecast is 2402.2 feet. Outflows at Libby are still the 4.0 Kcfs minimum.

Hungry Horse is currently at an elevation of 3500.63 ft (4-24-08) and has drafted 2.0 feet last week. The end of April FC elevation at Hungry Horse based on the new April Final forecast is 3521.3 feet. Outflows at Hungry Horse have increased somewhat over the last week, ranging between 4.5 and 4.6 Kcfs.

Dworshak is currently at an elevation of 1479.07 feet (4-24-08) and drafted 7.6 feet last week; outflows at Dworshak have been 10.5 - 10.6 Kcfs. The end of April FC at Dworshak is 1493.7 feet. At the April 22nd, 2008 TMT Meeting, all parties agreed that outflows at Dworshak would remain at approximately full powerhouse for the next week.

The Brownlee Reservoir was at an elevation of 2027.8 feet on April 24th, 2008, drafting 2.85 feet last week. Outflows at Brownlee Dam have been 13.0 to 22.2 Kcfs over the last week. The end of April FC elevation at Brownlee based on the new April Final forecast is 2033.8 feet.

**Spill:** In accordance with the Court Order, spill was initiated at the Snake River Projects at 0001 hours on April 3, 2007. The Court Order calls for the following spill levels at the Federal Snake River Projects:

<b>Project</b>	<b>Day/Night Spill</b>
Lower Granite	20Kcfs/20Kcfs
Little Goose	30%/30%
Lower Monumental	Gas Cap/Gas Cap
Ice Harbor	30%/30% vs 45Kcfs/Gas Cap Study

Spill at Lower Granite Dam has averaged an instantaneous 20 Kcfs and spill at Little Goose Dam is achieving the 30% over the 24 hour period. The Court ordered 14 days of nighttime gas cap spill at this project will begin at 1800 hours on April 25, 2008. Spill to the gas cap at Lower Monumental Dam has decreased over the past week from 27 to about 24 Kcfs based on the tailrace readings at Lower Monumental Dam that were near 120% (and exceeded by 0.1% on 4/20), and the Ice Harbor Dam forebay TDG readings that were near, but did not exceed 115%. However, at the present lowered spill levels, both the tailrace and forebay are well below the waiver limits. Spill at Ice Harbor Dam resumed court ordered spill of 45 Kcfs daytime spill and gas cap nighttime spill on April 11th, after the RSW seal replacement was completed.

Court ordered spill at the lower Columbia projects began on April 10, 2007. The Court Order calls for the following spill levels at the Federal Lower Columbia River Projects:

<b>Project</b>	<b>Day/Night Spill</b>
McNary	40%/40%
John Day	0/60%
The Dalles	40%/40%
Bonneville	100 Kcfs/100 Kcfs

Spill at McNary and The Dalles dams met the Court ordered spill this past week. Spill at John Day Dam was 60% of nighttime spill until the evening of April 21st, when the project began spilling 30% of instantaneous flow for 24 hours

daily prior to the beginning of TSW testing on April 26th or 27th. Spill at Bonneville Dams has been close to the Court's Order of 100 Kcfs.

Total dissolved gas at the federal hydroprojects was under the waiver limits over this past week with the exception of Lower Monumental Dam where a tailrace reading of 120.1% occurred on April 20th. There were no exceedences recorded in the Mid Columbia as well.

Gas bubble trauma (GBT) monitoring occurred at all the Snake River sites, Rock Island Dam and at Bonneville Dam. There were no observations of GBT at the Snake or lower Columbia sites. At Rock Island Dam 2 of 50 (4%) fish sampled were observed with minor signs of GBT.

**Smolt Monitoring:** Relatively large numbers of smolts continue to be captured at SMP traps over the past week as hatchery releases and wild out-migrants continued passing the traps steadily. Smolt passage continued to pick up in the hydro-system this past week as well; with daily passage indices at Lower Granite Dam averaging nearly 40,000 yearling Chinook and 36,000 per day for steelhead smolts.

At the Salmon River Trap, as with last week, this week the catch was predominantly hatchery origin yearling Chinook. Similar to last week also, PIT-tag recaptures were primarily from releases at Rapid River Hatchery and Knox Bridge (McCall Hatchery). Flows in the Salmon River, as measured at the USGS gage at White Bird, varied between 8 Kcfs and 11 Kcfs this past week. Flows declined over the past 5 days as cooler temperatures limited snow melt. Flows were below average for this past week as historic average flows reflect the typically increasing hydrograph associated with spring runoff.

At the Imnaha River Trap the numbers of yearling Chinook and steelhead captured have declined steadily over the past week. Over the last several days roughly equal numbers of clipped and unclipped smolts of both species have been captured in the trap. The drop in yearling Chinook numbers likely reflects the passage of fish released at the Imnaha Acclimation Pond. Unclipped fish are wild origin fish; those fish showed decreasing

passage numbers as well. The decline in steelhead numbers likely reflects the passage of fish released at Big Sheep Creek and Little Sheep Creek. The steelhead release into Big Sheep Creek was entirely unmarked, so that most steelhead being captured at the trap are likely hatchery origin. Flows in Imnaha River declined this week, with flows dropping to 525 cfs on April 24, well below historic average for that date. The declining flows could also explain the decreasing catch at the trap.

At the Grande Ronde Trap they captured 1,500 yearling Chinook on April 20 and April 21. Those fish were almost entirely hatchery origin fish (either ad-clipped or coded wire tagged). Steelhead catch decreased this past week, with collection peaking at 514 fish of April 16. Flows on the Grande Ronde River have also decreased to around 5 Kcfs this past week, about 1 Kcfs below historic average.

At the Lewiston Trap on the Snake River IDFG crews began to catch yearling Chinook and steelhead remained relatively steady over the past week.

At Lower Granite Dam the daily passage indices for yearling Chinook rose above 45,000 fish on April 19, and have remained above 30,000 per day since. Steelhead indices were also higher this week, averaging 36,000 per day compared to just over 3,000 per day last week.

At Little Goose Dam, where sampling has been limited to condition sampling fish injuries have been of concern to fisheries managers. The table below summarizes injury proportions in the samples over the past several days of sampling.

Summary of injuries in condition samples at Little Goose Dam.

Date	Number Sampled		Percent Injured	
	CH1	ST	CH1	ST
04/08/08	14	76	35.7	25.0
04/10/08	43	111	30.2	22.5
04/15/08	125	382	32.8	28.5
04/22/08	93	373	19.4	12.6
4/24/08	104	119	21	20

Sampling at Lower Monumental Dam has been conducted in support of capturing fish for avian predation studies. Sampling was halted on April 20 after 100% mortality in the previous days' collection. The mortality was due to fish being held in a hopper and flow being inadvertently shutoff, causing the fish mortality. After the incident the procedures related to holding fish for research were reviewed so that future accidents might be avoided.

#### **Hatchery Release:**

**Snake River Zone:** The Snake River Zone encompasses the Snake River and its tributaries from its confluence with the Columbia River to Hells Canyon Dam. The volitional release of approximately 2.5 million yearling spring Chinook juveniles from Rapid River Hatchery into the Little Salmon River was scheduled to end this week. However, as of April 24th, hundreds of PIT-tagged juveniles are still being detected at the Rapid River juvenile detection site each day. Also released to the Salmon River this week were 174,132 yearling spring Chinook juveniles from Sawtooth Hatchery. Finally, a volitional release of approximately 184,000 yearling spring Chinook from Tucannon Hatchery was scheduled to end this week. Several releases of summer steelhead were scheduled to end this week. In all, these releases totaled nearly 1.52 million juveniles. Of these, approximately 70% were released into the Salmon River, 20% were released into the Clearwater River, and 10% were released into the Grande Ronde River. In addition to the releases of steelhead that were scheduled to end this week, several releases totaling about 1.44 million summer steelhead were scheduled to begin this week. Approximately 97% of these steelhead were scheduled for release into the Clearwater River, while the remaining 3% were scheduled for release into the Salmon River.

Approximately 400,000 subyearling fall Chinook are scheduled for release into this zone over the next two weeks, with about 50% being released into the Clearwater River and 50% being released on the Snake River, below Hells Canyon Dam. Several releases of summer steelhead are scheduled to end over the next two weeks. These

releases all began in Mid-April and are expected to total over 1.20 million juveniles. Of these, about 72% were scheduled for release into the Pahsimeroi River, while the remaining 28% were scheduled for release into the Salmon River. In addition, several releases of summer steelhead are scheduled to begin over the next two weeks. In all, these releases are expected to total approximately 677,000 summer steelhead juveniles. The majority (76%) of these summer steelhead will be released into the Salmon River. The remaining 24% are scheduled for release into the Grande Ronde River. Finally, about 140,000 sockeye juveniles are scheduled for release into this zone, beginning May 1st. Half of these sockeye juveniles will be released into Redfish Lake, while the other half will be released into the Salmon River.

**Mid-Columbia Zone:** The Mid-Columbia Zone encompasses the area of the Columbia River and its tributaries from McNary Dam to Chief Joseph Dam. Approximately 300,000 subyearling fall Chinook juveniles were scheduled for release into the Yakima River this week. In addition, over 1.53 million yearling spring Chinook from Leavenworth National Fish Hatchery were scheduled for release into the Wenatchee River this week. Several volitional releases of juvenile coho to the Methow, Wenatchee, and Yakima rivers were planned to begin this week. These releases are part of the Yakama Tribal Program to re-establish coho runs to these basins. In all, the volitional releases beginning this week will total approximately 1.84 million juveniles and are expected to run through early to mid-May. Two volitional releases of summer steelhead were scheduled to end this week. These releases both began in mid-April and were comprised of a release of 180,000 juveniles to the Mid-Columbia from Ringold Hatchery and a release of 85,000 juveniles from the Dayton Acclimation Ponds on the Touchet River. In addition to these two volitional releases, several other releases of summer steelhead were scheduled to begin this past week. In all, the releases beginning this week are expected to total approximately 516,000 summer steelhead juveniles. Of these, 60% were scheduled for release to the Methow River and its tributaries. The remaining

40% will be split between the Okanogan (27%) and Touchet (13%) rivers.

Approximately 115,000 yearling spring Chinook juveniles are planned for release into Lake Wenatchee, although the exact release date is unknown at this time. In addition, about 1.07 million yearling summer Chinook juveniles are anticipated for release into this zone over the next two weeks. Of these, 87% are scheduled for release from the Dryden Acclimation ponds on the Wenatchee River. The remaining 13% are scheduled for release into the Mid-Columbia River. In addition to the 1.84 million coho that were scheduled for release this week, several releases totaling over 630,000 coho juveniles are scheduled to begin over the next two weeks. These releases are also part of the Yakama Tribal Program to re-establish Coho runs to the Wenatchee, Methow, and Yakima river basins. A volitional release of approximately 20,000 summer steelhead to the Okanogan River is scheduled to end next week.

Finally, nearly 450,000 summer steelhead are scheduled for release into this zone, beginning next week. Approximately 73% of these steelhead are scheduled for release into the Wenatchee River and its tributaries and were tagged with green or pink Elastomer tags. The remaining 27% of these steelhead are scheduled for release into the Methow River.

**Lower Columbia Zone:** The Lower Columbia Zone is defined as the Columbia River and its tributaries from Bonneville Dam to McNary Dam. The volitional release of approximately 376,000 yearling spring Chinook from Warm Springs National Fish Hatchery was scheduled to end this week. This release began in mid-March. In addition, a volitional release of approximately 72,000 yearling spring Chinook juveniles from Blackberry Acclimation pond on Hood River was scheduled to begin this week. Also scheduled for release into Hood River this week were approximately 54,000 winter steelhead. Finally, 45,750 steelhead juveniles were scheduled for release into the White Salmon River this week. Of these, 54% were summer steelhead and 46% were winter steelhead.

The final release of subyearling fall Chinook

Tules from Spring Creek NFH is scheduled to take place in early May. Approximately 3.75 million subyearling fall Chinook Tules are anticipated for this release. Nearly 1.1 million coho juveniles are scheduled for release into the Klickitat River. This release currently scheduled to begin on May 7th. Finally, beginning next week, about 150,000 summer steelhead will be released into the Umatilla River.

#### **Adult Fish Passage :**

Adult counts at Bonneville Dam have been updated through April 23rd. Between March 15th and April 23rd, 18,862 adult spring Chinook had passed Bonneville Dam. Daily adult spring Chinook counts at Bonneville ranged from 449 to 2,708. The 2008 count was about 1.5 times larger than the 2007 adult spring Chinook count of 12,431 at Bonneville Dam but is only 28.7% of the ten year average. The Bonneville adult steelhead count for the same date range this year was 1,577 fish which was about 94.4% of the 2007 count of 1,670 fish. The 2008 wild steelhead count at Bonneville Dam was 587 fish as of April 23rd. At Willamette Falls Dam, the 2008 count for steelhead was 3,503, as of April 22nd. This year's steelhead count is about 70.3% of the 2007 count of 4,978 at Willamette Falls Dam.

At upriver sites, adult steelhead continue to move through the hydro system to reach their tributaries and spawning sites. The majority of these fish over-wintered in the pools and will complete their trip to the spawning grounds in March through early May. Daily counts at Lower Granite ranged from 89 to 167 adult steelhead last week. The total steelhead count passing at Lower Granite Dam as of April 24th was 6,857. The 2008 count was about 66.8% of the 2007 count of 10,253 and about 96.6% of the 10-year average count of 7,096 at Lower Granite Dam. The 2008 wild steelhead at Lower Granite Dam as of April 24th was 1,934. At Rock Island Dam, as of April 24th, 89 adult steelhead have been counted and at Rocky Reach Dam, 171 adult steelhead have been counted so far this season.

Joseph Frazier, an Associated Press writer, reported in an article on Thursday April 24th that state wildlife officials have begun trapping sea

lions. On April 23rd, the 9th U.S. Circuit Court of Appeals ruled that some of the animals could be trapped but not killed in reply to a lawsuit brought by the Humane Society. Earlier this year the National Marine Fisheries Service authorized the removal of about 85 animals a year for five years but recommended that the annual take should be limited to 30 animals. They also recommended that capture should take precedence over killing. April 24th was the first day of trapping sea lions by state wildlife officials. They trapped eight sea lions. Of these, two were endangered Stellar sea lions and had to be released, two had been identified as problems in previous years, and the rest were not considered problem animals. The two problem sea lions are destined for Sea World. The rest are to be transported to the mouth of the Columbia and freed.

\* See sampling comments <http://www.fpc.org/currentDaily/smpcomments.htm>

Smolt indices, clipped & unclipped or combined, are presented in the following order: yearling chinook (chinook 1's), subyearling chinook (chinook 0's), steelhead, coho, and sockeye. Two classes of fish counts are shown in these tables: collection counts, which account for sample rates but are not adjusted for flow; and passage indices, which are collection counts divided by the proportion of water passing through the sampled powerhouse. Passage indices are not population estimates, but are used to adjust collection counts for daily fluctuations in the site's or project's operations. The classes of counts presented in the report are defined below for each site. Most samples occur over a 24-hr period that spans two calendar days. In this report, the date shown corresponds with the sample end date.

### Definitions for Smolt Index Counts

- WTB (Collection) = Salmon River Trap at Whitebird : Collection Counts
- IMN (Collection) = Imnaha River Trap : Collection Counts
- GRN (Collection) = Grande Ronde River Trap : Collection Counts
- LEW (Collection) = Snake River Trap at Lewiston : Collection Counts
- LGR (Index) = Lower Granite Dam Bypass Collection System : Passage Index Counts  
 $\text{Passage Index} = \text{Collection Counts} / \{ \text{Powerhouse Flow} / (\text{Powerhouse Flow} + \text{Spill}) \}$
- LGS (Index) = Little Goose Bypass Collection System : Passage Index Counts  
 $\text{Passage Index} = \text{Collection Counts} / \{ \text{Powerhouse Flow} / (\text{Powerhouse Flow} + \text{Spill}) \}$
- LMN (Index) = Lower Monumental Dam Bypass Collection System : Passage Index Counts  
 $\text{Passage Index} = \text{Collection Counts} / \{ \text{Powerhouse Flow} / (\text{Powerhouse Flow} + \text{Spill}) \}$
- RIS (Index) = Rock Island Dam Second Powerhouse Bypass Trap : Passage Index Counts  
 $\text{Passage Index} = \text{Collection Counts} / \{ \text{Powerhouse 2 Flow} / (\text{Powerhouse 1 \& 2 Flow} + \text{Spill}) \}$
- MCN (Index) = McNary Dam Bypass Collection System : Passage Index Counts  
 $\text{Passage Index} = \text{Collection Counts} / \{ \text{Powerhouse Flow} / (\text{Powerhouse Flow} + \text{Spill}) \}$
- JDA (Index) = John Day Dam Bypass Collection System : Passage Index Counts  
 $\text{Passage Index} = \text{Collection Counts} / \{ \text{Powerhouse Flow} / (\text{Powerhouse Flow} + \text{Spill}) \}$
- BO2 (Index) = Bonneville Dam Second Powerhouse Bypass Collection System : Passage Index Counts  
 $\text{Passage Index} = \text{Collection Counts} / \{ \text{Powerhouse 2 Flow} / (\text{Powerhouse 1 \& 2 Flow} + \text{Spill}) \}$

JDA and BO2 data collected for the FPC by Pacific States Marine Fisheries Commission.  
 RIS data collected for the FPC by Chelan Co. PUD/Washington Dept. of Fish and Wildlife.  
 LGR, LMN, and MCN data collected for the FPC by Washington Dept. of Fish and Wildlife.  
 LGS and GRN data collected for the FPC by Oregon Dept. of Fish and Wildlife.  
 IMN data collected for the FPC by the Nez Perce Tribe.

BON and LGR have switched to video counts so the data is delayed.

\*PRD is not posting wild steelhead numbers.

These numbers were collected from USACE, Grant PUD, Douglas PUD, Chelan PUD, ODFW and DART.

Wild steelhead numbers are included in the total. Wild Steelhead are defined as unclipped fish.

Historic counts (pre-1996) were obtained from CRITFC and compiled by the FPC.

Historic counts 1997 to present were obtained from the Corps of Engineers.

Page last updated on: 04/25/08

BON counts from January 1, 2008 to March 14, 2008 (our traditional counts begin March 15):

Year	Chinook Adult	Chinook Jack	Steelhead	Wild Steelhead
2008	42	0	578	278
2007	22	0	1,677	517
