Weekly Report #08 - 17

June 27, 2008

1827 NE 44th Ave., Suite 240
 Portland, OR 97213
 phone: 503/230-4099
 fax: 503/230-7559

Summary of Events:

Water Supply: Precipitation throughout the Columbia Basin has varied between 65% and 147% of average at individual sub-basins since the beginning of June. Precipitation above The Dalles has been 107% of average over June. Over the entire water year, precipitation has generally been near or above average.

Table 1. Summary of June 1-23 precipitation and cumulative October through June precipitation with respect to average (1971-2000), at select locations within the Columbia and Snake River Basins.

Location	Water Year 2008 June 1-23		Water Year 2008 October 1, 2007 to June 23, 2008	
	Observed (inches)	% Average	Observed (inches)	% Average
Columbia Above Coulee	2.06	113	19.98	100
Snake River Above Ice Harbor	1.03	92	14.91	101
Columbia Above The Dalles	1.47	107	19.43	101
Kootenai	1.92	102	18.62	91
Clark Fork	1.84	124	14.66	107
Flathead	2.57	127	18.62	102
Pend Oreille/ Spokane	1.99	119	27.10	101
Central Washington	0.41	83	5.67	73
Snake River Plain	0.51	70	7.69	82
Salmon/Boise/ Payette	0.94	83	17.37	100
Clearwater	2.80	147	24.45	104
SW Washington Cascades/Cowlitz	2.53	67	67.57	93
Willamette Valley	2.28	65	55.19	103

Table 2 displays the June Final and July Early Bird runoff volume forecasts for multiple reservoirs. Water Supply Forecasts generally increased between the June Final and July Early Bird forecasts with Dworshak showing the biggest change by increasing 21% from the June Final to July Early Bird forecast. The current forecast (July Early Bird) at The Dalles between January and July is 102000 Kaf (95% of average).

Table 2. June Final and July Early Bird Runoff Volume Forecasts for various reservoirs within the Columbia and Snake River Basins.

Location	June Final		July Early Bird	
	% Average (1971- 2000)	Probable Runoff Volume (Kaf)	% Average (1971- 2000)	Probable Runoff Volume (Kaf)
The Dalles (Jan-July)	92	98200	95	102000
Grand Coulee (Jan-July)	95	59800	98	61700
Libby Res. Inflow, MT (Jan-July)	93	5840	93	5860
Hungry Horse Res. Inflow, MT (Jan-July)	99	2200	107	2370
Lower Granite Res. Inflow (Apr- July)	102	21900	108	23300
Brownlee Res. Inflow (Apr-July)	76	4780	72	4550
Dworshak Res. Inflow (Apr-July)	109	2880	130	3450

The Biological Opinion flow period began on April 3rd in the lower Snake River (Lower Granite) and began on April 10th in the mid (Priest Rapids) and lower (McNary) Columbia River. According to the April Final Water Supply Forecast, the flow objectives this spring

are 100 Kcfs at Lower Granite, 260 Kcfs at McNary, and 135 Kcfs at Priest Rapids. Generally, flows have been high over the last week.

The spring Biological Opinion flow period at Lower Granite Dam ended on June 20th, 2008. Flows at Lower Granite Dam averaged 98.4 Kcfs over the spring season, slightly below the 100 Kcfs flow target. The summer Biological Opinion flow at Lower Granite Dam is determined by the June Final Water Supply Forecast and is 52.5 Kcfs this year.

Flows at Lower Granite dam averaged 128.1 Kcfs between June 21st, 2008 and June 26th, 2008.

Flows at Priest Rapids have averaged 196.4 Kcfs over the last week and 164.9 Kcfs over the spring season and flows at McNary have averaged 335.1 Kcfs over the last week and 284.4 Kcfs over the spring season.

Grand Coulee Reservoir is at 1285.8 feet (6-26-08) and has refilled 1.6 feet over the last week. Outflows at Grand Coulee have ranged between 131.9 and 212.1 Kcfs over the last week. Inflows last week have ranged between 183.9 Kcfs and 199.2 Kcfs.

The Libby Reservoir is currently at elevation 2437.37 feet (6-26-08) and refilled 4.1 feet last week. Outflows at Libby have decreased after the completion of the sturgeon flow augmentation operations; currently outflows are at 20.2 Kcfs. Inflows at Libby have ranged between 28.1 Kcfs to 40.5 Kcfs over the last week.

Hungry Horse is currently at an elevation of 3555.37 ft (6-26-08) and has refilled 7.4 feet last week. Outflows were 5.1–7.7 Kcfs last week; inflows ranged between 14.9 Kcfs and 21.2 Kcfs last week.

Dworshak is currently at an elevation of 1595.6 feet (6-26-08) and refilled 7.8 feet last week. Outflows at Dworshak were at full powerhouse capacity with slightly more than 5 Kcfs of spill, but decreased to less than full powerhouse at week’s end. Dworshak inflows have ranged between 19.8 and 26.6 Kcfs last week.

The Brownlee Reservoir is at an elevation of 2076.09 feet (June 26th, 2008), and has been holding steady. Outflows at Brownlee Dam have been 12.8 to 20.6 Kcfs over the last week. Inflows at Brownlee Dam have been 14.4 to 17.7 Kcfs over the last week.

Spill: The spring spill period in the Snake River ended on June 20th and the summer spill season was initiated on June 21, 2008. The Court Order calls for the following spill levels at the Federal Snake River Projects:

Project	Day/Night Spill
Lower Granite	18 Kcfs/18 Kcfs
Little Goose	30%/30%
Lower Monumental	17 Kcfs/17 Kcfs
Ice Harbor	30%/30% vs 45 Kcfs/Gas Cap Study

High runoff continues to result in flows in excess of hydraulic and generation capacity throughout the lower Snake River. Dworshak Dam outflow was increased for flood control and flow exceeded hydraulic capacity early in the week, but was gradually decreased over the week to less than hydraulic capacity. Two units are presently out of service at Lower Granite Dam limiting powerhouse capacity to about 70 Kcfs at Lower Granite Dam. Flows continue to exceed hydraulic capacity at this project and spill has exceeded the Court Order. Little Goose Dam has spilled near 30% of daily flow over the past week, with uncontrolled spill during some hours and less than 30% spill on other hours when spill can be reduced to decrease TDG levels. At Lower Monumental Dam summer spill of 17 Kcfs is met whenever possible, but during some periods excess spill occurs due to over generation capacity and excess hydraulic capacity conditions. Spill at Ice Harbor Dam has generally exceeded the court ordered levels of 45 Kcfs daytime spill and gas cap nighttime spill alternating with 30% instantaneous spill, and is spill in excess of hydraulic capacity and excess generation. However, when possible spill has been reduced to address total dissolved gas.

Court ordered spill at the lower Columbia projects began on April 10, 2007. The Court Order calls for the following spill levels at the Federal Lower Columbia River Projects:

Project	Day/Night Spill
McNary	60%/60% vs 40%/40%*
John Day	0/60%; 30%/30% vs 40%/40% test
The Dalles	40%/40%
Bonneville	85 Kcfs/Gas Cap*

*Summer Spill initiated 6/21/08

Summer spill at McNary was initiated on June 21, 2008 to facilitate the conduct of a research study comparing spill levels of 40%/40% versus 60%/60%. The project generally met or exceeded the Court ordered spill this past week when the objective was 40%/40%, but the 60%/60% spill was often restricted due to TDG levels at the McNary Dam tailrace monitor. At John Day Dam spill has ranged between 30% of daily average flow and about 40% of daily average flow. Spill at The Dalles Dam met, or exceeded the Court Order. Spill at Bonneville Dam has met or exceeded the Court Order. The summer spill levels of 85 Kcfs during daytime hours and gas cap spill at night were initiated on June 21, 2008 to facilitate the conduct of research at this project. Total dissolved gas has exceeded the waiver limits at many sites due to spill in excess of hydraulic capacity and generation needs.

Gas bubble trauma (GBT) monitoring at Lower Granite Dam has concluded for the year. Sampling occurred at all other Snake River monitoring sites, Rock Island Dam in the Mid Columbia, and at McNary and Bonneville dams in the lower Columbia. At McNary and Rock Island dams signs of GBT in the non paired fins have not been observed, while at Little Goose 1% of fish sampled had minor signs, at Lower Monumental 4% of fish sampled had minor signs and at Bonneville Dam 1% of fish sampled were detected with minor signs of GBT in the non paired fins.

Smolt Monitoring: Spring migrant indices continued to decrease throughout the hydrosystem over the past week, while subyearling Chinook numbers have continued to increase.

At Snake River SMP sites the daily passage indices for yearling Chinook and steelhead continued to decline. Yearling Chinook indices dropped to below 1,000 per day this week at Lower Granite Dam about half of last weeks' numbers. Steelhead indices dropped to about 1,500 per day this past week. compared to over 2,000 per day last week.

Subyearling migrants predominate in the Columbia River also. At Rock Island Dam indices for yearling Chinook and steelhead averaged less than 90 per day over the past week a little lower than the previous week. Subyearling Chinook indices averaged around 240 fish per day this week compared to indices that approached 900 fish per day three weeks ago.

At the lower Columbia River dams indices for all spring migrants were down, while subyearling Chinook indices continued to increase. At McNary the

subyearling Chinook index rose to 141,000 on June 26; the highest daily number this year.

At Bonneville Dam the subyearling Chinook passage indices averaged nearly 33,000 per day over the past week, with the index reaching nearly 51,000 on June 26.

Hatchery Release:

Snake River Zone: The Snake River Zone encompasses the Snake River and its tributaries from its confluence with the Columbia River to Hells Canyon Dam. There were no releases of juvenile salmonids scheduled for the Snake River Zone this week.

However, beginning early July, approximately 300,000 spring Chinook parr will be released into the Selway River. Since this is a parr release, these juveniles are not expected to out-migrate until spring 2009. All 300,000 juveniles from this release are unmarked. This is the only release of salmonid juveniles to this zone scheduled to take place over the next two weeks.

Mid-Columbia Zone: The Mid-Columbia Zone encompasses the area of the Columbia River and its tributaries from McNary Dam to Chief Joseph Dam. A volitional release of approximately 3.45 million subyearling fall Chinook from Ringold Hatchery to the Mid-Columbia River was scheduled to end this week. Approximately 94% of these juveniles are unmarked. There were no other releases of juvenile salmonids to this zone over the past week.

Beginning in early July, approximately 848,000 subyearling summer Chinook will be released from Turtle Rock Hatchery into the Mid-Columbia River. Also, an experimental release of approximately 12,000 coho juveniles from Cle Elem Lake is scheduled to end on or around June 30. This release began on April 28th and fish have slowly out-migrated as the lake has filled throughout the season. There are no other releases of juveniles salmonids scheduled for this zone over the next two weeks.

Lower Columbia Zone: The Lower Columbia Zone is defined as the Columbia River and its tributaries from Bonneville Dam to McNary Dam. Approximately 1.95 million subyearling fall Chinook were scheduled for release into the Klickitat River this week. These juveniles were reared at the Klickitat Hatchery and are mostly unmarked (about 85%). Finally, approximately 2.0 million subyearling fall Chinook are scheduled for release from the Little White Salmon NFH into the Little White Salmon on or around July 3. There are no other scheduled releases of juvenile salmonids to this zone over the next two weeks.

Adult Fish Passage:

The summer Chinook count began June 1st at Bonneville Dam. Daily passage numbers at Bonneville Dam have ranged between 1,868 and 2,987 adult summer Chinook in the last week. The 2008 summer Chinook count of 52,320 is about 2.02 times greater than the 2007 and 1.33 times greater than the 10 year average. The summer Chinook jack count of 8,339 is about 1.18 times greater than the 2007 count and 1.91 times greater than the 10 year average to date. The adult summer Chinook count total at The Dalles Dam was 40,021, about 76.5% of the Bonneville passage total to date. A total of 25,774 summer Chinook have passed McNary Dam. The adult summer Chinook count total at Lower Granite Dam in the Snake River was 9,887 as of June 26th. The 2008 adult summer Chinook count at Rock Island Dam in the upper Columbia was 2,132 with daily totals ranging from 184 to 424.

As of June 26th, 12,663 steelhead had passed Bonneville Dam. The 2008 count was 1.60 times greater than the 2007 count of 7,896 and had 117 fewer fish than the 10 year average. The 2008 wild steelhead count at Bonneville Dam was 3,248 fish. The daily steelhead counts at The Dalles Dam ranged between 206 and 402 for the week with a cumulative count of 4,490. About 35.4% of the steelhead counted at Bonneville Dam had passed The Dalles Dam. The majority of the 3,979 steelhead at McNary Dam have moved up into the Snake River with the cumulative count at Ice Harbor now at 3,465 for the season. The cumulative count at Priest Rapids Dam was at 325 for the season as of June 25th.

As of June 26th at Bonneville Dam, the adult Shad count was 1,653,567 which was about 69.7% of the 2007 count of 2,371,868 and only 57.7% the 10 year average count of 2,864,528. The 2008 Bonneville Dam sockeye count of 157,486 increased about 10.2 times compared to the 2007 count and increased approximately 4.38 times compared to the 10 year average. A total of 12,936 adult sockeye have been counted at Priest Rapids Dam so far this season. Two of the major spawning sites for sockeye in the upper Columbia river zone are Lake Wenatchee and Lake Osoyoos (Okanogan basin). To date, only 20 sockeye have been counted at Ice Harbor Dam in the Snake River.

* See sampling comments

<http://www.fpc.org/currentDaily/smpcomments.htm>

Smolt indices, clipped & unclipped or combined, are presented in the following order: yearling chinook (chinook 1's), subyearling chinook (chinook 0's), steelhead, coho, and sockeye. Two classes of fish counts are shown in these tables: collection counts, which account for sample rates but are not adjusted for flow; and passage indices, which are collection counts divided by the proportion of water passing through the sampled powerhouse. Passage indices are not population estimates, but are used to adjust collection counts for daily fluctuations in the site's or project's operations. The classes of counts presented in the report are defined below for each site. Most samples occur over a 24-hr period that spans two calendar days. In this report, the date shown corresponds with the sample end date.

Definitions for Smolt Index Counts

WTB (Collection) = Salmon River Trap at Whitebird : Collection Counts

IMN (Collection) = Imnaha River Trap : Collection Counts

GRN (Collection) = Grande Ronde River Trap : Collection Counts

LEW (Collection) = Snake River Trap at Lewiston : Collection Counts

LGR (Index) = Lower Granite Dam Bypass Collection System : Passage Index Counts

Passage Index = Collection Counts / {Powerhouse Flow / (Powerhouse Flow + Spill)}

LGS (Index) = Little Goose Bypass Collection System : Passage Index Counts

Passage Index = Collection Counts / {Powerhouse Flow / (Powerhouse Flow + Spill)}

LMN (Index) = Lower Monumental Dam Bypass Collection System : Passage Index Counts

Passage Index = Collection Counts / {Powerhouse Flow / (Powerhouse Flow + Spill)}

RIS (Index) = Rock Island Dam Second Powerhouse Bypass Trap : Passage Index Counts

Passage Index = Collection Counts / {Powerhouse 2 Flow / (Powerhouse 1 & 2 Flow + Spill)}

MCN (Index) = McNary Dam Bypass Collection System : Passage Index Counts

Passage Index = Collection Counts / {Powerhouse Flow / (Powerhouse Flow + Spill)}

JDA (Index) = John Day Dam Bypass Collection System : Passage Index Counts

Passage Index = Collection Counts / {Powerhouse Flow / (Powerhouse Flow + Spill)}

BO2 (Index) = Bonneville Dam Second Powerhouse Bypass Collection System : Passage Index Counts

Passage Index = Collection Counts / {Powerhouse 2 Flow / (Powerhouse 1 & 2 Flow + Spill)}

JDA and BO2 data collected for the FPC by Pacific States Marine Fisheries Commission.

RIS data collected for the FPC by Chelan Co. PUD/Washington Dept. of Fish and Wildlife.

LGR, LMN, and MCN data collected for the FPC by Washington Dept. of Fish and Wildlife.

LGS and GRN data collected for the FPC by Oregon Dept. of Fish and Wildlife.

IMN data collected for the FPC by the Nez Perce Tribe.

BON and LGR have switched to video counts so the data is delayed.

*PRD is not posting wild steelhead numbers.

These numbers were collected from USACE, Grant PUD, Douglas PUD, Chelan PUD, ODFW and DART.

Wild steelhead numbers are included in the total. Wild Steelhead are defined as unclipped fish.

Historic counts (pre-1996) were obtained from CRITFC and compiled by the FPC.

Historic counts 1997 to present were obtained from the Corps of Engineers.

Page last updated on: 06/27/08

BON counts from January 1, 2008 to March 14, 2008 (our traditional counts begin March 15):

Year	Chinook Adult	Chinook Jack	Steelhead	Wild Steelhead
2008	42	0	578	278
2007	22	0	1,677	517
