

Fish Passage Center

Weekly Report #09 - 05

April 10, 2009

1827 NE 44th Ave., Suite 240
 Portland, OR 97213
 phone: 503/230-4099
 fax: 503/230-7559

Summary of Events:

Water Supply: Precipitation throughout the Columbia Basin has varied between 95% and 149% of average at individual sub-basins over March. Precipitation above The Dalles has been 127% of average over March. Over the entire water year, precipitation has generally been near average.

Table 1. Summary of March precipitation and cumulative October through March precipitation with respect to average (1971-2000), at select locations within the Columbia and Snake River Basins.

Location	Water Year 2009 March 1-30		Water Year 2009 October 1, 2008 to March 30, 2009	
	Observed (inches)	% Average	Observed (inches)	% Average
Columbia Above Coulee	2.12	122	13.54	95
Snake River Above Ice Harbor	2.06	129	10.76	105
Columbia Above The Dalles	2.36	127	14.02	99
Kootenai	2.07	120	13.03	90
Clark Fork	1.76	152	10.62	119
Flathead	2.06	131	11.96	99
Pend Oreille/ Spokane	3.22	120	18.41	92
Central Washington	0.97	121	5.19	88
Snake River Plain	1.04	95	5.79	95
Salmon/Boise/ Payette	2.57	137	11.33	89
Clearwater	4.05	149	21.35	115
SW Washington Cascades/Cowlitz	7.10	104	46.41	87
Willamette Valley	6.14	99	36.34	81

Snowpack within the Columbia Basin has generally increased over the past month.

Average snowpack in the Columbia River for the Snake River above Palisades is 103% of average, for the Clearwater and Salmon Basins the average snowpack is 98% of average, and for lower Columbia Basins between McNary and Bonneville Dam average snowpack is 176% of average.

Table 2 displays the March Final and April Final runoff volume forecasts for multiple reservoirs. Water Supply Forecasts have increased at all sites between the March Final and April Final forecasts. The current forecast at The Dalles between January and July is 92000 Kaf (86% of average).

Table 2. March Final and April Final Runoff Volume Forecasts for various reservoirs within the Columbia and Snake River Basins.

Location	March Final		April Final	
	% Average (1971- 2000)	Probable Runoff Volume (Kaf)	% Average (1971- 2000)	Probable Runoff Volume (Kaf)
The Dalles (Jan-July)	80	86200	86	92000
Grand Coulee (Jan-July)	87	54900	89	56200
Libby Res. Inflow, MT (Apr-Aug)	84 84*	5250 5296*	88 90*	5500 5672*
Hungry Horse Res. Inflow, MT (Jan-July)	90	2010	94	2100
Lower Granite Res. Inflow (Apr- July)	75	16200	95	20400
Brownlee Res. Inflow (Apr-July)	53	3350	79	4970
Dworshak Res. Inflow (Apr-July)	82 92*	2170 2461*	102 99*	2710 2662

* Denotes COE Forecast

Grand Coulee Reservoir is at 1280.4 feet (4-09-09) and has drafted 1.0 foot in the last week. The Grand Coulee flood control elevation is tied to the runoff volume forecast at The Dalles Dam. Recent increases in runoff volume in the Snake Basin, as well as in basins above Grand Coulee, have resulted in a higher runoff forecast at The Dalles causing a lower flood control elevation at Grand Coulee. The end of April FC elevation is now expected to be between 1256 and 1258 feet and flow from Grand Coulee is expected to increase as the project is drafted to the end of April flood control elevation. Outflows at Grand Coulee have ranged between 31.2 and 87.2 Kcfs over the last week.

The Libby Reservoir is currently at elevation 2402.8 feet (4-09-09) and drafted 0.5 feet last week. The end of April elevation at Libby is 2434.2 feet, therefore Libby is currently 31.4 feet below the end of April FC elevation at Libby. Outflows at Libby have been 4.0 Kcfs.

Hungry Horse is currently at an elevation of 3508.1 ft (4-09-09) and has drafted 0.4 feet last week. Outflows at Hungry Horse have been 0.47–3.1 Kcfs last week; Hungry Horse has been operating to Columbia Falls Minimum outflows. As of today the Hungry Horse end of April FC elevation is not available.

Dworshak is currently at an elevation of 1530.8 feet (4-09-09) and drafted 7.5 feet last week. Outflows ranged between 13.3 and 14.9 Kcfs in response to an increased runoff volume forecast that established an end of April flood control elevation of 1515.6 Feet. The project is drafting as much as possible while trying to meet water quality criteria for total dissolved gas. The project will likely not make the April 15 flood control elevation and may need to exceed the end of April flood control elevation, as the draft curve is likely to intercept the refill to June 30 full elevation curve.

The Brownlee Reservoir was at an elevation of 2052.3 feet on April 9th, 2009, drafting 5.0 feet last week. The end of April FC elevation is not yet available, but is expected to go up based on the runoff volume forecast. Outflows at Brownlee Dam have been 14.5 to 21.9 Kcfs over the last week.

Spill:

Flows were increased at Dworshak Dam in response to the latest runoff volume forecast. Spill is now exceeding 4 Kcfs and is expected to be between 4 and 5 Kcfs through the month. The 2009 planned spring spill program at the lower Snake River Projects

began on April 3 at 0001 hours and will continue through June 20, 2009. The following table shows the planned operations for 2009.

Project	Day/Night Spill
Lower Granite	20Kcfs/20Kcfs
Little Goose	30%/30%
Lower Monumental	Gas Cap/Gas Cap
Ice Harbor	30%/30% vs 45Kcfs/Gas Cap Study

Spill at Lower Granite Dam averaged an instantaneous 20 Kcfs, and spill at Little Goose Dam achieved the 30% over the 24 hour period. Spill to the gas cap at Lower Monumental Dam was initially increased on 4/06, but was decreased on 4/13 and again on 4/15 based on the Ice Harbor Dam forebay TDG reading; however, the tailrace readings at Lower Monumental Dam are well below the waiver limits. Spill at Ice Harbor Dam is presently occurring as 45 Kcfs daytime spill and gas cap nighttime spill in advance on the implementation of study like conditions.

The 2009 spill program began at the lower Columbia River projects at 0001 hours on April 10th. The following table shows the planned operations for 2009.

Project	Day/Night Spill
McNary	40%/40%
John Day	30%/30% on pre-test days; 30%/30% vs. 40%/40% on test days
The Dalles	40%/40%
Bonneville	100 Kcfs/100 Kcfs

Adult Fish Passage:

The historical counting schedule at Bonneville began March 15th and continues through November 15th. This counting schedule allows for comparison of current year counts with historical data. The historical counting schedule began on March 1st at Lower Granite Dam. Counting began on April 1st for The Dalles Dam, John Day Dam, McNary Dam, Lower Monumental Dam, and Little Goose Dam. Willamette Falls Dam counts adult salmon throughout the entire year.

Adult counts at Bonneville Dam have been updated through April 9th. Daily adult spring Chinook counts at Bonneville Dam ranged from 42 to 130 adult salmon per day. Between March 15th and April 9th,

714 spring Chinook have been counted at Bonneville Dam. In 2008, 910 adult spring Chinook were counted at Bonneville Dam for the same time period. The 2009 adult spring Chinook count at Bonneville Dam is 78.5% of the 2008 count. The Bonneville spring Chinook adult count is only about 4.6% of the 10 year average of 15343. At Willamette Falls Dam 46 adult spring Chinook have been counted so far this year. At The Dalles Dam the 2009 adult spring Chinook is 212 and at McNary Dam 27 adult spring Chinook have been counted.

The Bonneville Dam 2009 steelhead count of 1065 is about 1.1 times greater than the 2008 count of 958. The 2009 steelhead count is about 85.5% of the 10-year average of 1245. At upriver sites, adult steelhead continue to move through the hydro system to reach their tributaries and spawning sites. The majority of these fish over-wintered in pools and will complete their trip to their spawning grounds in March through early May. Daily adult steelhead counts at Lower Granite Dam ranged from 204 to 294 adults per day last week. This year's Lower Granite steelhead count of 6732 is 1.35 times greater than the 2008 count of 4965 and 1.1 times greater than the 10 year average of 6106. The 2009 wild steelhead count as of April 9th was 1585. At Willamette Falls Dam, the 2009 count for steelhead was 2209, as of April 7th. This year's steelhead count is only about 62.1% of the 2008 count of 3357 at Willamette Falls Dam for the same date range.

At Bonneville Dam, daily counts of adult salmon and steelhead found on the separator and by passed are being tracked this year for the period of March 1st to April 10th. The corner collector was opened on April 3rd. Three adult salmon were bypassed on March 15th. From March 15th to April 6th, daily adult steelhead by passed counts ranged from 1 to 6. A total of 65 adult steelhead and 2 adult Chinook have been bypassed. Additionally, 4 unknown adult salmonids have been bypassed between March 15th and April 6th.

Stansell et al. reported that as of April 3rd, 24 California sea lions and 25 Steller sea lions have been counted at Bonneville Dam. The highest daily abundance of sea lions at Bonneville Dam occurred on March 26th when 42 sea lions were observed at the dam. Sea lion trapping began on March 10th. Eight sea lions were trapped this week. Two sea lions were tagged and released. Up to five of the sea lions will be sent to Gladys Porter Zoo in Texas, depending on the results of their health exam. The traps will continue to be used

to mark sea lions not previously seen at the dam and to remove animals that meet the removal criteria granted to the states by NOAA Fisheries under Section 120 of the Marine Mammal Protection Act. Hazing from boats began in January has been conducted on most days through April 3rd.

Stansell, Robert; Tackley, Sean; and Gibbons, Karrie. 2009. Status Report – Pinniped Predation and Deterrent Activities at Bonneville Dam, 2009. Fisheries Field Unit, US Army Corps of Engineers, Bonneville Lock and Dam, Cascade Locks, Oregon. Available online at <http://www.nwd-wc.usace.army.mil/tmt/documents/fish/2009/update20090403.pdf>.

Smolt Monitoring:

Sampling for smolt monitoring has begun at all sites, including McNary Dam, where installation of screens has begun and should be completed by early next week. Large numbers of hatchery origin yearling Chinook are passing the traps this week reflecting the passage of large releases from tributary hatcheries.

The Salmon River Trap, operated by Idaho Department of Fish and Game, has been capturing large numbers of hatchery yearling Chinook over the past two weeks as recent hatchery releases pass down stream. On April 6 the trap collected 1,230 yearling Chinook, nearly all of which were clipped fish. Flows in the Salmon River have passed the historic median of 8 Kcfs for this time period as of April 10, and are near 9 Kcfs as measured at USGS gage at Riggins, Idaho. Wild yearling Chinook collection numbers remained low but steady over the past week at the Salmon Trap. At the Imnaha River Trap, operated by the Nez Perce Tribe, large numbers of yearling Chinook were collected as acclimation released fish continued passing; collection of yearling Chinook was over 3,000 fish on April 7, with nearly all of those fish of hatchery origin. Flows in the Imnaha River have also increased above historic median the past few days. Flow reached over 900 cfs on April 8 compared to about a historic median for that data of 650 cfs as measured at the Imnaha gage. At the Grande Ronde Trap, operated by the Oregon Department of Fish and Wildlife, about 260 yearling Chinook per day were captured this past week. Most fish collected at the trap this week were hatchery origin fish, likely released from a volitional release out of the Lostine Acclimation facility that ended March 31. Flows in the Grande Ronde River, as measured at Troy have remained well above historic median values over the past week, with flows in excess of 10 Kcfs

compared to historic median of just over 5 Kcfs. The Lewiston Trap on the Snake River has been capturing small numbers of yearling and sub-yearling Chinook as well as steelhead. Flows are near historic median in the Snake River at Anatone for this time period. Flows fluctuated between 35 and 50 Kcfs this past week.

Sampling continued at Lower Granite, Little Goose and Lower Monumental dams in the Lower Snake River. In the earliest days of sampling at the sites holdover yearling Chinook had been collected in relatively large numbers. Over the past week of sampling at Lower Granite Dam hatchery origin yearling Spring/Summer Chinook have predominated. Increasing numbers of steelhead are also being collected at the Snake River sites; as have small numbers of sockeye and coho.

At Rock Island dam small numbers of all species have been collected. McNary Dam began sampling on April 9. The relatively late start date was due to a delayed installation of screens at the project. Fifteen lamprey were in the sample at McNary Dam on the first day of sampling which expands to an estimated 150 juvenile lamprey in the collection, given the sample rate of 10%. Sampling continued at John Day and Bonneville dams this past week. At Bonneville Dam relatively large numbers of subyearling Chinook have been captured over the past two weeks, with the daily index averaging around 500 fish per day this past week and over 1,000 per day over the previous week. Most of the subyearling Chinook captured continued to be fry (fish less than 60mm).

Hatchery Release:

Snake River Zone: The Snake River Zone encompasses the Snake River and its tributaries from its confluence with the Columbia River to Hells Canyon Dam. Several releases of summer steelhead to the Snake River Zone were scheduled to begin this week. In all, these releases are expected to total approximately 1.67 million summer steelhead juveniles. Of these about 52% were scheduled for release into the Pahsimeroi River, 45% to the Salmon River, and 3% to the Imnaha River. No other releases of juvenile salmonids were planned begin in this zone over the past week.

Beginning in mid-April, about 442,000 yearling fall Chinook from Lyons Ferry Hatchery are scheduled to be released acclimation facilities on the Snake and Clearwater rivers, above Lower Granite Dam. Due to disease, the release of 142,000 yearling fall Chinook from Captain Johns Rapids acclimation facility began

early (April 3rd). The remaining releases of yearling fall Chinook (~300,000) above Lower Granite dam are still scheduled to begin on or around April 15th. In addition to these releases, approximately 450,000 yearling fall Chinook from Lyons Ferry were scheduled for direct release into the Snake River. This releases was scheduled to begin around April 1st and end around April 15th. Many releases of yearling spring Chinook that began weeks ago are scheduled to end over the next two weeks. In all, these earlier releases total about 1.72 million spring Chinook juveniles. In addition to these earlier releases, several releases of yearling spring Chinook juveniles to the Snake River Zone are scheduled to begin over the next two weeks. In all, these releases are expected to total nearly 1.51 million juveniles. Of these, approximately 73% are scheduled for release into tributaries of the Clearwater River, 19% to the Grande Rhonde River, and 8% to the Tucannon River. Finally, releases totaling nearly 4.0 million summer steelhead juveniles to the Snake River Zone are scheduled to begin over the next two weeks. Of these, about 52% are scheduled for release into the Clearwater River and its tributaries and 33% to are scheduled for release into the Salmon River and its tributaries. The remaining 14% will be split between the Wallowa (6%), Grande Rhonde (4%), Tucannon (2.5%), and Snake (1.5%) rivers.

Mid-Columbia Zone: The Mid-Columbia Zone encompasses the area of the Columbia River and its tributaries from McNary Dam to Chief Joseph Dam. Beginning today, just over 28,000 subyearling fall Chinook juveniles from Prosser Hatchery are scheduled for release into the Yakima River. In addition to these subyearlings, approximately 8,300 yearling fall Chinook were scheduled for release from Prosser Hatchery this week. All of the subyearling and yearling fall Chinook that were scheduled for release into the Yakima River this week are unmarked. The release of approximately 250,000 yearling spring Chinook from Carson NFH to the Walla Walla River was scheduled to end this week. The Yakama Tribal Program to re-establish Coho runs in the Yakima, Methow, and Wenatchee basins continued releasing this week. Several releases of coho juveniles to the Yakima River were scheduled to begin this week. In all, these releases total about 1.02 million juveniles and are expected to run through mid-May. Releases of coho juveniles to the Methow River are scheduled to begin on or around April 15th.

In addition to the 28,000 subyearling fall Chinook schedule for release into the Yakima River this

week, nearly 290,000 are scheduled for release in mid-April. Approximately 318,000 subyearling fall Chinook juveniles are scheduled for release into the Yakima River, beginning in mid-April. Also beginning in mid-April are several releases of yearling spring Chinook to the Methow River. In all, these spring Chinook releases are expected to total nearly 731,000 juveniles. Several of these releases are expected to run through the end of April. Nearly 2 million yearling summer Chinook are scheduled for release throughout this zone over the next two weeks. Of these, about 32% are scheduled for release into the Okanogan River, 24% into the Wenatchee River, 22% into the Methow River, and 22% into the mid-Columbia River.

As mentioned above, the Yakama Tribal Program to re-establish Coho runs in the Methow basin is scheduled to begin on or around April 15th, with a release of approximately 286,000 coho juveniles to the Methow River. In addition, new releases of coho juveniles to the Wenatchee basin are expected to begin over the next two weeks. In particular, there is a release of just over 183,000 coho juveniles to Icicle Creek scheduled for April 20th. Other earlier releases of coho juveniles to the Yakima and Wenatchee river basins are expected to continue over the next several weeks. Finally, several releases totaling just over 1.1 million summer steelhead are anticipated to begin within the next two weeks. Of these, about 30% are scheduled for release into the Wenatchee River, 20% to the Methow River, 16% to the Mid-Columbia, and 13% to the Okanogan River. The remaining 21% will be split between the Touchet (12%) and Walla Walla (9%) rivers.

Lower Columbia Zone: The Lower Columbia Zone is defined as the Columbia River and its tributaries from Bonneville Dam to McNary Dam. Approximately 37,500 yearling spring Chinook juveniles from Round Butte Hatchery were scheduled for release into Hood River this week. In addition, about 500,000 coho juveniles from Cascade Hatchery were scheduled for release into the Umatilla River, beginning on or around April 5th. Finally, approximately 162,000 summer steelhead from Round Butte Hatchery were scheduled for release into the Deschutes River this week.

Beginning April 13th, approximately 7.75 million subyearling fall Chinook juveniles will be released into the Lower Columbia River Zone. These subyearling fall Chinook releases are part of the agreement to “re-program” Spring Creek NFH in order to eliminate the

need for a March release. Of the 7.5 million juveniles to be released, 78% will be released from Spring Creek NFH and 22% will be released from Little White Salmon NFH. Volitional releases of yearling spring Chinook juveniles to the Deschutes and Umatilla rivers that began weeks ago are scheduled to end over the next couple of weeks. In all, these releases will total about 1.03 million spring Chinook juveniles, with 55% being released to the Deschutes and 45% being released to the Umatilla River. In addition to these earlier releases, nearly 1.64 million yearling spring Chinook are scheduled for release into this zone over the next two weeks. Of these, about 74% are scheduled for release into the Wind River and 25% are scheduled for release into the Little White Salmon River. A release of about 2.5 million coho to the Klickitat is scheduled to end next week (~April 15th). In addition, a release of about 500,000 coho juveniles to the Umatilla River is scheduled to end tomorrow (April 11th). Approximately 194,000 summer steelhead are scheduled for release to this zone over the next two weeks. Of these, about 77% are scheduled for release into the Umatilla River, 12% to the White Salmon River, and 10% to Hood River. Finally, about 20,000 winter steelhead juveniles are scheduled for release into the White Salmon River, beginning on or around April 15th.

* See sampling comments <http://www.fpc.org/currentDaily/smpcomments.htm>

Smolt indices, clipped & unclipped or combined, are presented in the following order: yearling chinook (chinook 1's), subyearling chinook (chinook 0's), steelhead, coho, and sockeye. Two classes of fish counts are shown in these tables: collection counts, which account for sample rates but are not adjusted for flow; and passage indices, which are collection counts divided by the proportion of water passing through the sampled powerhouse. Passage indices are not population estimates, but are used to adjust collection counts for daily fluctuations in the site's or project's operations. The classes of counts presented in the report are defined below for each site. Most samples occur over a 24-hr period that spans two calendar days. In this report, the date shown corresponds with the sample end date.

Definitions for Smolt Index Counts

- WTB (Collection) = Salmon River Trap at Whitebird : Collection Counts
- IMN (Collection) = Imnaha River Trap : Collection Counts
- GRN (Collection) = Grande Ronde River Trap : Collection Counts
- LEW (Collection) = Snake River Trap at Lewiston : Collection Counts
- LGR (Index) = Lower Granite Dam Bypass Collection System : Passage Index Counts
 $\text{Passage Index} = \text{Collection Counts} / \{\text{Powerhouse Flow} / (\text{Powerhouse Flow} + \text{Spill})\}$
- LGS (Index) = Little Goose Bypass Collection System : Passage Index Counts
 $\text{Passage Index} = \text{Collection Counts} / \{\text{Powerhouse Flow} / (\text{Powerhouse Flow} + \text{Spill})\}$
- LMN (Index) = Lower Monumental Dam Bypass Collection System : Passage Index Counts
 $\text{Passage Index} = \text{Collection Counts} / \{\text{Powerhouse Flow} / (\text{Powerhouse Flow} + \text{Spill})\}$
- RIS (Index) = Rock Island Dam Second Powerhouse Bypass Trap : Passage Index Counts
 $\text{Passage Index} = \text{Collection Counts} / \{\text{Powerhouse 2 Flow} / (\text{Powerhouse 1 \& 2 Flow} + \text{Spill})\}$
- MCN (Index) = McNary Dam Bypass Collection System : Passage Index Counts
 $\text{Passage Index} = \text{Collection Counts} / \{\text{Powerhouse Flow} / (\text{Powerhouse Flow} + \text{Spill})\}$
- JDA (Index) = John Day Dam Bypass Collection System : Passage Index Counts
 $\text{Passage Index} = \text{Collection Counts} / \{\text{Powerhouse Flow} / (\text{Powerhouse Flow} + \text{Spill})\}$
- BO2 (Index) = Bonneville Dam Second Powerhouse Bypass Collection System : Passage Index Counts
 $\text{Passage Index} = \text{Collection Counts} / \{\text{Powerhouse 2 Flow} / (\text{Powerhouse 1 \& 2 Flow} + \text{Spill})\}$

JDA and BO2 data collected for the FPC by Pacific States Marine Fisheries Commission.
 RIS data collected for the FPC by Chelan Co. PUD/Washington Dept. of Fish and Wildlife.
 LGR, LMN, and MCN data collected for the FPC by Washington Dept. of Fish and Wildlife.
 LGS and GRN data collected for the FPC by Oregon Dept. of Fish and Wildlife.
 IMN data collected for the FPC by the Nez Perce Tribe.

BON and LGR have switched to video counts so the data is delayed.

*PRD is not posting wild steelhead numbers.

These numbers were collected from USACE, Grant PUD, Douglas PUD, Chelan PUD, ODFW and DART.

Wild steelhead numbers are included in the total. Wild Steelhead are defined as unclipped fish.

Historic counts (pre-1996) were obtained from CRITFC and compiled by the FPC.

Historic counts 1997 to present were obtained from the Corps of Engineers.

Page last updated on: 03/27/09

BON counts from January 1, 2009 to March 14, 2009 (our traditional counts begin March 15):

Year	Chinook Adult	Chinook Jack	Steelhead	Wild Steelhead
2009	19	-1	321	109
2008	42	0	568	273
