## Weekly Report #09 - 13

June 5, 2009

1827 NE 44th Ave., Suite 240  
 Portland, OR 97213  
 phone: 503/230-4099  
 fax: 503/230-7559

### Summary of Events:

**Water Supply:** Precipitation throughout the Columbia Basin has varied between 78% and 188% of average at individual sub-basins over May. Precipitation above The Dalles has been 110% of average over May. Over the entire water year, precipitation has generally been near average.

**Table 1. Summary of May precipitation and cumulative October through May precipitation with respect to average (1971-2000), at select locations within the Columbia and Snake River Basins.**

Location	Water Year 2009 May 1-25		Water Year 2009 October 1, 2008 to May 25, 2009	
	Observed (inches)	% Average	Observed (inches)	% Average
Columbia Above Coulee	1.80	100	16.45	93
Snake River Above Ice Harbor	1.63	107	13.90	105
Columbia Above The Dalles	1.75	110	17.29	99
Kootenai	1.93	108	16.05	88
Clark Fork	1.29	78	12.62	106
Flathead	2.14	109	15.03	96
Pend Oreille/Spokane	2.22	106	23.1	94
Central Washington	0.69	112	6.42	90
Snake River Plain	1.25	105	8.06	97
Salmon/Boise/Payette	1.91	132	14.48	92
Clearwater	2.61	107	26.39	111
SW Washington Cascades/Cowlitz	5.76	188	57.69	93
Willamette Valley	4.96	174	46.36	88

Average snowpack in the Columbia River for basins above the Snake River confluence is 71% of average, for Snake River Basins the average snowpack is 37% of average, and for lower Columbia Basins between McNary and Bonneville Dam average snowpack is 149% of average.

Table 2 displays the May Final and June Early runoff volume forecasts for multiple reservoirs. The current forecast at The Dalles between January and July is 91100 Kaf (85% of average).

**Table 2. May Final and June Early Runoff Volume Forecasts for various reservoirs within the Columbia and Snake River Basins.**

Location	May Final		June Early	
	% Average (1971- 2000)	Probable Runoff Volume (Kaf)	% Average (1971- 2000)	Probable Runoff Volume (Kaf)
The Dalles (Jan-July)	85	91100	85	91100
Grand Coulee (Jan-July)	87	55000	86	54100
Libby Res. Inflow, MT (Apr-Aug)	84	5270	81	5050
Hungry Horse Res. Inflow, MT (Jan-July)	92	2050	92	2050
Lower Granite Res. Inflow (Apr- July)	97	20900	97	20800
Brownlee Res. Inflow (Apr-July)	79	5000	76	4820
Dworshak Res. Inflow (Apr-July)	99 98*	2610 2631	93	2470

\* Denotes COE Forecast

The Biological Opinion flow period began on April 3rd in the lower Snake River (Lower Granite) and began on April 10th in the mid (Priest Rapids) and lower (McNary) Columbia River. According to the April Final

Water Supply Forecast, the flow objectives this spring are 100 Kcfs at Lower Granite, 228 Kcfs at McNary, and 135 Kcfs at Priest Rapids. At Lower Granite flows from April 3-June 4 have averaged 107.7 Kcfs and 158.6 Kcfs over the last week, flows at Priest Rapids from April 10-June 4 averaged 134.4 Kcfs and 169.0 Kcfs over the last week, and flows at McNary have averaged 264.7 Kcfs between April 10-June 4 and 343.0 Kcfs over the last week.

Grand Coulee Reservoir is at 1278.7 feet (6-4-09) and has refilled 9.3 feet over the last week. Outflows at Grand Coulee have ranged between 117.6 and 160.5 Kcfs over the last week.

The Libby Reservoir is currently at elevation 2421.6 feet (6-4-09) and has refilled 8.1 feet last week. Outflows at Libby have been 13.4 Kcfs over the last week.

Hungry Horse is currently at an elevation of 3541.8 ft (6-4-09) and has refilled 8.2 feet last week. Outflows at Hungry Horse have been 4.2-5.2 Kcfs last week.

Dworshak is currently at an elevation of 1587.0 feet (6-4-09) and has refilled 11.4 feet last week. Outflows at Dworshak were increased from 4.4 Kcfs to 7.1 over the last week.

The Brownlee Reservoir was at an elevation of 2076.5 feet on June 4<sup>th</sup>, 2009, refilling 2.4 feet last week. Outflows at Brownlee Dam have been 18.4 to 24.5 Kcfs over the last week.

**Spill:** Over the last three days some spill has occurred at Dworshak Dam due to a unit outage. Spill at Dworshak has ranged between 2.2-2.8 kcf over the last three days with TDG ranging between approximately 106.9 and 109.8 % TDG below Dworshak Dam.

The 2009 planned spring spill program at the lower Snake River Projects began on April 3 at 0001 hours and will continue through June 20, 2009. The following table shows the planned operations for 2009.

Project	Day/Night Spill
Lower Granite	20Kcfs/20Kcfs
Little Goose	30%/30%
Lower Monumental	Gas Cap/Gas Cap
Ice Harbor	30%/30% vs 45Kcfs/Gas Cap Study

Flow in the Snake River remained high over the past week. Spill at Lower Granite Dam has been

above the court order and in excess of hydraulic and generation capacity. Spill at Little Goose Dam did meet the 30% average spill on May 31 and June 1 but has since been below 30% due to lower spill caps because of TDG levels in the forebay of Lower Monumental Dam. Spill to the gas cap at Lower Monumental Dam has been exceeded over the past week during a comparison of bulk versus uniform spill pattern test. The uncontrolled spill has occurred due to the high river flows. Spill is higher during uniform spill pattern testing. The implementation of study-like conditions at Ice Harbor Dam began on April 30<sup>th</sup>, and spill management has attempted to alternate between 30% spill for 24 hours and 45 Kcfs Daytime spill and gas cap nighttime spill, in two day blocks. Uncontrolled spill has also occurred at this project due to the high river flows and daily average spill has ranged between 46-51% of daily average flow.

The 2009 spill program began at the lower Columbia River projects at 0001 hours on April 10<sup>th</sup> and will continue through June 30<sup>th</sup>. The following table shows the planned operations for 2009.

Project	Day/Night Spill
McNary	40%/40%
John Day	30%/30% on pre-test days; 30%/30% vs. 40%/40% on test days
The Dalles	40%/40%
Bonneville	100 Kcfs/100 Kcfs

McNary Dam spill met or exceeded the Court Order over the past week. At John Day Dam the testing of 30% versus 40% spill occurred, however, spill has been limited at this project since May 31<sup>st</sup>. The Dalles Dam spill has been less than the 40% over most of the past week after spill caps were reduced due to the TDG at the Bonneville Dam forebay. At Bonneville Dam spill levels have met or exceeded the 100 Kcfs over the past week.

The high river flows have resulted in total dissolved gas measurements at the Snake River federal hydroprojects that exceeded the waiver limits over this past week at the forebay monitors at Little Goose, Lower Monumental and Ice Harbor dams.

In the Lower Columbia TDG exceeded the waiver limits at the Bonneville Dam forebay and tailrace all of last week. The Camas/Washougal monitor also read

higher than 115% over all of last week, however, this monitor is not a point of compliance.

Gas bubble trauma (GBT) monitoring occurred at Lower Granite, Little Goose and Lower Monumental dams in the Snake River, Rock Island in the Mid Columbia River and at McNary and Bonneville dams in the lower Columbia. A few fish with minor signs of GBT were detected in the samples this past week at Rock Island and Bonneville dams.

**Smolt Monitoring:** Collection of Spring migrants declined at all SMP sites in the Snake River and Lower Columbia this past week, while subyearling Chinook indices increased. The exception to this was at Rock Island where sockeye and coho numbers increased this past week. Sampling at the Imnaha Trap captured a decreasing number of yearling Chinook and steelhead. That reduction is consistent with other recent years as the spring migration winds down in the tributaries as well as in the hydro-system.

At Lower Granite Dam subyearling Chinook predominated in passage numbers followed by steelhead. PIT-tag detections at Lower Granite confirm that the acclimation released subyearling Chinook were arriving at the site over the past week. And releases at Hells Canyon and North Lapwai Valley Acclimation Ponds were also detected. Sockeye passage rapidly over the past week as the peak of Salmon River migrants appear to have passed through the Snake River.

At Rock Island dam the daily passage indices for coho predominated in the sample. Coho indices have remained above 1,000 per day over the past few weeks on average. Sockeye indices were also relatively high this week with the average index for those species at 200 per day compared to 130 per day last week.

The predominant salmonids in the sample at McNary Dam the past week were again yearling Chinook, but the numbers declined with the passage index averaging 16,000 per day compared to 91,000 last week. Subyearling Chinook indices began increasing over the past two weeks and by June 4 subyearling indices had surpassed those of yearling Chinook.

At Bonneville Dam all Spring migrant indices were down. Yearling Chinook passage predominated over the past week with index averaging 21,000 per day compared to 54,000 per day last week. Subyearling numbers were low averaging about 4,000 per day over the past two weeks.

## **Hatchery Release:**

**Snake River Zone:** The Snake River Zone encompasses the Snake River and its tributaries from its confluence with the Columbia River to Hells Canyon Dam. Two releases of subyearling fall Chinook into the Snake River basin were completed over the last week. The release of about 200,000 Lyons Ferry subyearlings into Couse Creek that began several weeks ago ended on June 1<sup>st</sup>. A release of 500,000 subyearling fall Chinook (200k unmarked) reared by the Nez Perce Tribal Hatchery was completed around May 30<sup>th</sup>. Two other releases of subyearling fall Chinook began this last week. The release of 800,000 (500k unmarked) and 200,000 subyearlings into the Clearwater (Nez Perce Tribal Hatchery) and Snake River (Lyon's Ferry NFH) basins respectively began on about June 1<sup>st</sup>. There were no other releases scheduled for this week in this zone.

In addition, several releases of subyearling fall Chinook to the Snake River are scheduled to begin or end over the next two weeks. Both of the aforementioned fall Chinook releases are scheduled to be completed on the 15<sup>th</sup> of June. On June 10<sup>th</sup>, fall Chinook subyearlings are scheduled for release into Lukes Gulch and Cedar Flats acclimation facilities in amounts of 200,000 each. Another 117k fall Chinook subyearling release is scheduled for release into the Clearwater River on June 15<sup>th</sup>. Finally a subyearling spring Chinook release is also scheduled on June 15<sup>th</sup> in the Lostine River (61,000 parr). There are no other scheduled releases of juvenile salmonids to this zone over the next two weeks.

**Mid-Columbia Zone:** The Mid-Columbia Zone encompasses the area of the Columbia River and its tributaries from McNary Dam to Chief Joseph Dam. Several volitional releases of anadromous salmonids that began weeks ago ended on about May 31<sup>st</sup> including: 453,000 subyearling summer Chinook released from Wells Hatchery, 140,000 unmarked yearling spring Chinook released to Lake Wenatchee, and 460,000 summer steelhead juveniles released into the Methow River (72%), Okanogan River(28%). About 99,000 of the Methow River releases were marked with yellow Elastomer tags.

Looking ahead, there are several releases of fall and summer Chinook scheduled to begin on June 15<sup>th</sup> in the Mid-Columbia. About 10 million total fall Chinook subyearlings are scheduled for release from Ringold Springs and Priest Rapids hatcheries. These two releases are about 79% unmarked in total. Also, nearly

¾ million subyearling summer Chinook are scheduled for release from Turtle Rock Hatchery. There are no other scheduled releases of juvenile salmonids to this zone over the next two weeks.

**Lower Columbia Zone:** The Lower Columbia Zone is defined as the Columbia River and its tributaries from Bonneville Dam to McNary Dam. There were no scheduled releases of anadromous salmonid juveniles to this zone over the past week. Looking ahead, on June 18<sup>th</sup> a release of 450,000 subyearling fall Chinook is scheduled for the Little Salmon River.

**Adult Fish Passage:** The summer Chinook count began June 1<sup>st</sup> at Bonneville Dam. Daily passage numbers at Bonneville Dam ranged between 1861 and 2233 adult summer Chinook in the last week. The 2009 summer Chinook count of 5959 is about 1.76 times greater than the 2008 count and 1.64 times greater than the 10 year average. The summer Chinook jack count of 2656 is about 4.40 times greater than the 2008 of 603 and about 6.1 times greater than the 10 year average.

Adult spring Chinook counts at Bonneville Dam ended on May 31<sup>st</sup>. The total 2009 spring Chinook count of 114525 was about 91.2% of the 2008 count and about 71.5% of the 10 year average. The 2009 Bonneville Dam spring Chinook jack count of 66631 is about 3.79 times greater than the 2008 count of 17554 and 5.79 times greater than the 10 year average of 11507. At Bonneville Dam, the 2009 spring Chinook migration arrived later than both the 2008 and 10 year average migration.

At Willamette Falls Dam, 14770 adult spring Chinook have been counted so far this year. The 2009 adult spring Chinook count at Willamette Falls Dam is 2.88 times greater than the 2008 count of 5120. At The Dalles Dam the 2009 adult spring Chinook count of 93908 is about 98.3% of the 2008 count and 82.5% of the 10 year average. The 2009 spring jack count at The Dalles Dam of 53646 is 3.39 times greater than the 2009 count and 5.94 times greater than the 10 year average. At McNary Dam 65173 adult spring Chinook have been counted. The 2009 adult spring Chinook count at McNary Dam is about 1.01 times greater than the 2008 count and only about 77.9% of the 10 year average. The 2009 McNary Dam spring Chinook jack count of 41310 is 3.66 times greater than the 2008 count of 11286 and 5.94 times greater than the 10 year average count of 6956. The 2009 adult spring Chinook count at Lower Granite Dam of 35753 is 95.7% of the 2008 count and 77.9% of the 10 year average. The

2009 Lower Granite spring Chinook jack count of 24401 is 3.19 times greater than the 2008 count and 6.20 times greater than the 10 year average.

The Bonneville Dam 2009 steelhead count of 5027 is about 1.22 times greater than the 2008 count of 4100. The 2009 steelhead count is about 1.09 times greater than of the 10-year average of 4611. In the Snake River, this year's Lower Granite steelhead count of 10785 is 1.39 times greater than the 2008 count of 7783 and 1.39 times greater than the 10 year average of 7767. The 2009 wild steelhead count as of June 4<sup>th</sup> was 3383. At Rock Island Dam, as of June 2nd, 100 adult steelhead have been counted and at Rocky Reach Dam, 421 adult steelhead have been counted so far this season. At Willamette Falls Dam, the 2009 count for steelhead was 8070, as of May 28th. This year's steelhead count is only about 78.6% of the 2008 count of 10257 at Willamette Falls Dam for the same date range.

Daily adult sockeye passage numbers at Bonneville Dam ranged between 9 and 130 last week. The 2009 adult sockeye count at Bonneville Dam of 305 is about 1.78 times greater than the 2008 count of 171 and about 1.90 times greater than the 10 year average.

\* See sampling comments <http://www.fpc.org/currentDaily/smpcomments.htm>

Smolt indices, clipped & unclipped or combined, are presented in the following order: yearling chinook (chinook 1's), subyearling chinook (chinook 0's), steelhead, coho, and sockeye. Two classes of fish counts are shown in these tables: collection counts, which account for sample rates but are not adjusted for flow; and passage indices, which are collection counts divided by the proportion of water passing through the sampled powerhouse. Passage indices are not population estimates, but are used to adjust collection counts for daily fluctuations in the site's or project's operations. The classes of counts presented in the report are defined below for each site. Most samples occur over a 24-hr period that spans two calendar days. In this report, the date shown corresponds with the sample end date.

### Definitions for Smolt Index Counts

- WTB (Collection) = Salmon River Trap at Whitebird : Collection Counts
- IMN (Collection) = Imnaha River Trap : Collection Counts
- GRN (Collection) = Grande Ronde River Trap : Collection Counts
- LEW (Collection) = Snake River Trap at Lewiston : Collection Counts
- LGR (Index) = Lower Granite Dam Bypass Collection System : Passage Index Counts  
Passage Index = Collection Counts / {Powerhouse Flow / (Powerhouse Flow + Spill)}
- LGS (Index) = Little Goose Bypass Collection System : Passage Index Counts  
Passage Index = Collection Counts / {Powerhouse Flow / (Powerhouse Flow + Spill)}
- LMN (Index) = Lower Monumental Dam Bypass Collection System : Passage Index Counts  
Passage Index = Collection Counts / {Powerhouse Flow / (Powerhouse Flow + Spill)}
- RIS (Index) = Rock Island Dam Second Powerhouse Bypass Trap : Passage Index Counts  
Passage Index = Collection Counts / {Powerhouse 2 Flow / (Powerhouse 1 & 2 Flow + Spill)}
- MCN (Index) = McNary Dam Bypass Collection System : Passage Index Counts  
Passage Index = Collection Counts / {Powerhouse Flow / (Powerhouse Flow + Spill)}
- JDA (Index) = John Day Dam Bypass Collection System : Passage Index Counts  
Passage Index = Collection Counts / {Powerhouse Flow / (Powerhouse Flow + Spill)}
- BO2 (Index) = Bonneville Dam Second Powerhouse Bypass Collection System : Passage Index Counts  
Passage Index = Collection Counts / {Powerhouse 2 Flow / (Powerhouse 1 & 2 Flow + Spill)}

JDA and BO2 data collected for the FPC by Pacific States Marine Fisheries Commission.  
 RIS data collected for the FPC by Chelan Co. PUD/Washington Dept. of Fish and Wildlife.  
 LGR, LMN, and MCN data collected for the FPC by Washington Dept. of Fish and Wildlife.  
 LGS and GRN data collected for the FPC by Oregon Dept. of Fish and Wildlife.  
 IMN data collected for the FPC by the Nez Perce Tribe.

BON and LGR have switched to video counts so the data is delayed.

\*PRD is not posting wild steelhead numbers.

These numbers were collected from USACE, Grant PUD, Douglas PUD, Chelan PUD, ODFW and DART.

Wild steelhead numbers are included in the total. Wild Steelhead are defined as unclipped fish.

Historic counts (pre-1996) were obtained from CRITFC and compiled by the FPC.

Historic counts 1997 to present were obtained from the Corps of Engineers.

Page last updated on: 05/21/09

BON counts from January 1, 2009 to March 14, 2009 (our traditional counts begin March 15):

Year	Chinook Adult	Chinook Jack	Steelhead	Wild Steelhead
2009	19	-1	321	109
2008	42	0	568	273
