

Fish Passage Center

Weekly Report #09 - 24

August 21, 2009

1827 NE 44th Ave., Suite 240
 Portland, OR 97213
 phone: 503/230-4099
 fax: 503/230-7559

Summary of Events:

Water Supply: Precipitation throughout the Columbia Basin has varied between 56% and 317% of average at individual sub-basins through August. Precipitation above The Dalles has been 189% of average over August. Over the entire water year, precipitation has generally been near average.

Table 1. Summary of August Precipitation and cumulative October through August precipitation with respect to average (1971-2000), at select locations within the Columbia and Snake River Basins.

Location	Water Year 2009 August 1-17		Water Year 2009 October 1, 2008 to August 1-17, 2009	
	Observed (inches)	% Average	Observed (inches)	% Average
Columbia Above Coulee	1.65	178	21.67	93
SNAKE RIVER ABOVE ICE HARBOR	0.93	197	19.00	115
Columbia Above The Dalles	1.23	189	21.90	101
Kootenai	1.48	160	21.28	89
Clark Fork	1.65	232	17.43	108
Flathead	1.88	213	20.29	95
Pend Oreille/ Spokane	1.61	231	28.34	97
Central Washington	0.12	57	7.05	83
SNAKE RIVER PLAIN	0.51	161	12.54	119
Salmon/Boise/ Payette	1.22	317	18.71	99
Clearwater	1.98	300	31.57	109
SW Washington Cascades/Cowlitz	1.34	159	60.32	89
Willamette Valley	0.33	56	48.55	85

Table 2 displays the June Final and July Final runoff volume forecasts for multiple reservoirs. The most notable differences between the June Final and July Final forecasts came at Libby Dam and Lower Granite Dam. At Libby, the July Final forecast decreased 11% relative to the June Final Forecast. At Lower Granite Dam, the July Final forecast increased 7% relative to the June Final Forecast, it appears most of the increase at Lower Granite was due to an increase in water supply above Brownlee Dam (increased 14%). The Water Supply Forecast at The Dalles between January and July is 89300 Kaf (83% of average).

Table 2. June Final and July Final Runoff Volume Forecasts for various reservoirs within the Columbia and Snake River Basins.

Location	June Final		July Final	
	% Average (1971- 2000)	Probable Runoff Volume (Kaf)	% Average (1971- 2000)	Probable Runoff Volume (Kaf)
The Dalles (Jan-July)	86	92000	83	89300
Grand Coulee (Jan-July)	85	53700	79	49600
Libby Res. Inflow, MT (Apr-Aug)	80	5000 5062*	69	4330
Hungry Horse Res. Inflow, MT (Jan-July)	93	2060	91	2020
Lower Granite Res. Inflow (Apr- July)	102	21900	109	23500
Brownlee Res. Inflow (Apr-July)	76	4780	90	5710
Dworshak Res. Inflow (Apr-July)	98	2590 2597*	97	2570

*Denotes COE Forecast

The summer flow period began on 6-21-09 at Lower Granite Dam and the objective is 52.5 Kcfs. Flows at Lower Granite have average 51.4 Kcfs over the summer period and 32.1 Kcfs last week.

The summer flow period began on July 1 at McNary Dam and the objective is 200 Kcfs. Flows at McNary Dam have averaged 147.3 Kcfs over the summer period and 107.0 Kcfs last week.

Grand Coulee Reservoir is at 1281.5 feet (8-20-09) and drafted 2.0 feet over the last week. Outflows at Grand Coulee have ranged between 44.2 and 90.9 Kcfs over the last week. At the TMT Meeting on 8-19-09, the Salmon Managers voiced concern to the Action Agencies regarding Grand Coulee Dam refilling over several days last weekend and early this week when lower Columbia flows were extremely low (less than 100 Kcfs at McNary). The Salmon Mangers asked the Action Agencies to smoothly draft Grand Coulee to its summer elevation of 1278 feet by August 29, 2009 to ensure the Grand Coulee water would bolster lower Columbia flows through August 31st, 2009 (the end of the flow objective and spill period). At the TMT on August 21, 2009, the Action Agencies agreed to the draft of Grand Coulee by August 29, 2009 and will attempt to target a flow at McNary of at least 105 Kcfs.

The Libby Reservoir is currently at elevation 2443.2 feet (8-20-09) and has refilled 0.6 feet last week. Outflows at Libby are currently 7 Kcfs (minimum bull trout flow) and will remain at this level through August.

Hungry Horse is currently at an elevation of 3556.2 ft (8-20-09) and has drafted 1.1 feet last week. Outflows at Hungry Horse have been approximately 2.5 Kcfs last week. The BOR plans to draft Hungry Horse to elevation 3550 by the end of September.

Dworshak is currently at an elevation of 1546.2 feet (8-20-09) and has drafted 7.8 feet last week. Outflows at Dworshak were increased to 12 Kcfs on the afternoon of 8-18-09 due to temperature concerns at Lower Granite Dam. Outflows at Dworshak are expected to remain at 12 Kcfs through noon today then drop to full powerhouse flows (approximately 10 Kcfs) over the weekend and further drop to 8 Kcfs early Monday morning.

The Brownlee Reservoir was at an elevation of 2058.9 feet on August 20th, 2009, drafting 2.0 feet last week. Outflows at Brownlee Dam have been 8.1 to 16.5 Kcfs over the last week.

Spill:

The 2009 planned summer spill program at the lower Snake River Projects began at 0001 hours on June 20, 2009. The following table shows the planned operations for 2009.

Project	Day/Night Spill
Lower Granite	18Kcfs/18Kcfs
Little Goose	30%/30%
Lower Monumental	17Kcfs/17Kcfs
Ice Harbor	45Kcfs/Gas Cap

Lower Granite Dam spilled at, or above, the Court Order, except on the 16th and 17th when lower flows and powerhouse minimum flows precluded spilling 18 Kcfs. At Little Goose Dam the 30% spill was met, and a decision was made to spill a flat 11.6 Kcfs beginning August 18th for system stability. This spill level is to continue through August 31, 2009. At Lower Monumental dam the 17 Kcfs was not always met from August 14th to 17th due to low flows and powerhouse minimum requirements. At Ice Harbor Dam the court ordered levels of 45 Kcfs daytime spill and gas cap nighttime spill were often precluded due to low flows and required powerhouse minimum flows.

The following table shows the planned operations for summer spill levels in the lower Columbia River for 2009.

Project	Day/Night Spill
McNary	50%/50%* (beginning June 20)
John Day	30%/30%
The Dalles	40%/40%
Bonneville	75 Kcfs/gas cap

Flows in the lower River were generally low from August 14th to 17th, but the refill of Grand Coulee Reservoir during this period exacerbated the low flow levels. McNary Dam spill was below the 50% instantaneous during this period, with spill ranging from 35% to 42.8%. At John Day Dam the project is spilling an instantaneous 30%. At The Dalles Dam flows were below the level needed to spill 40% and meet powerhouse minimum flows. Spill ranged from 30.5 % to 37.4 % from August 15th to 18th. When flow increased the 40% level was met August 19th and 20th.

At Bonneville Dam all flow above the powerhouse minimum of about 30 Kcfs was spilled earlier in the week, with spill as low as 50 Kcfs at times. When flows increased on the 19th and the 20th, spill increased to a minimum of 75 Kcfs.

There were no exceedences of the 115%/120% TDG levels at the gages required for management of spill this past week. TDG registered slightly above 115% at the Camas/Washougal gage (08/18, 08/19 and 08/20). The total dissolved gas levels were due to the diel heating, and there is no water quality requirement to manage spill to this gage.

Gas bubble trauma (GBT) monitoring occurred at Little Goose and Lower Monumental dams in the Snake River, and at McNary and Bonneville dams in the lower Columbia. Over the past week no fish were detected with signs of GBT.

Smolt Monitoring:

Subyearling Chinook smolts continue to decline in numbers throughout the system. Unclipped subyearlings predominate at all the sites at this time suggesting that many of the late season outmigrant fish are of wild origin. It should be noted however, that a good portion of hatchery origin fish were unmarked as well.

At Lower Granite Dam subyearling Chinook predominated with coho smolt numbers second in prevalence but at very low numbers. Average daily passage index for subyearling Chinook was at 190 per day this week compared to 330 per day last week. At Little Goose Dam the subyearling Chinook indices decreased this week with the daily average index at 126 per day this week compared to 410 last week.

At Rock Island dam the daily passage indices for subyearling Chinook predominated in the sample, with indices averaging over 15 per day this week compared to 30 per day last week.

In the lower Columbia River subyearling Chinook smolt numbers declined again this week at McNary Dam. Subyearling Chinook passage indices dropped from nearly 5,000 per day last week to about 3,700 per day this week. At Bonneville Dam subyearling Chinook indices were down a little from last week; the index average just over 1,400 per day this week compared to over 1,700 per day last week.

Hatchery Release:

Snake River Zone: The Snake River Zone encompasses the Snake River and its tributaries from its confluence with the Columbia River to Hells Canyon Dam. There were no releases of juvenile salmonids

scheduled for this week. Furthermore, no releases of juvenile salmonids are scheduled to begin over the next two weeks.

Mid-Columbia Zone: The Mid-Columbia Zone encompasses the area of the Columbia River and its tributaries from McNary Dam to Chief Joseph Dam. There were no scheduled releases of juvenile salmonids to this zone this week. There are no releases of juvenile salmonids to this zone over the next two weeks.

Lower Columbia Zone: The Lower Columbia Zone is defined as the Columbia River and its tributaries from Bonneville Dam to McNary Dam. No releases of juvenile salmonids were scheduled for this zone over the past week. Furthermore, there are no releases scheduled for this zone over the next two weeks.

Adult Passage:

Fall Chinook began to pass Bonneville Dam on August 1st. Daily counts of adult fall Chinook ranged from 1425 to 2501. The 2009 adult fall Chinook count of 25283 was about 1.96 times greater than the 2008 count and about 1.79 times greater than the 10 year average. The fall Chinook jack count of 6414 was about 2.23 times greater than the 2008 count and about 3.24 times greater than the 10 year average. The adult fall Chinook count total at The Dalles Dam of 14883 is about 58.8% of the Bonneville passage to date.

Daily steelhead counts at Bonneville Dam for the past week ranged between 9134 and 25059. The daily adult steelhead count of 34053 on 8/13/09 was the highest recorded adult daily steelhead count at Bonneville Dam (date range searched was 1977 through 2009). Prior to this, the 2nd highest adult daily steelhead count at Bonneville Dam occurred on August 3rd, 2001 when a total of 14432 adult steelhead were counted. The Bonneville Dam 2009 steelhead count of 376758 is about 1.81 times greater than the 2008 count and 1.82 times greater than the 10 year average.

During this time of year, there are times when there are higher steelhead counts at upstream projects compared to downstream projects. The higher counts of steelhead at upstream sites compared to downstream sites in any particular year is because some steelhead spend the winter between sites, for instance between Ice Harbor and Lower Granite, and then start their migration upstream the following year. The summer steelhead run is delineated according to dates of passage past Bonneville Dam and is made up of two components. A-run steelhead pass Bonneville Dam from the first of June through August 25th and B-run steelhead pass Bonneville from August 26th through

October. A-run summer steelhead pass Bonneville Dam through August 25th. As of August 20th, the 2009 A-run adult steelhead count at Bonneville was 372250 which was about 1.82 times greater than the 2008 count of 204485 and was about 2 times greater than the 10 year average count of 185839.

In the Snake River, this year's Lower Granite total steelhead count of 20241 is about 97.5% of the 2008 count of 20748 and 1.41 times greater than the 10 year average of 14389. The 2009 wild steelhead count as of August 20th was 6817. At Rock Island Dam, as of August 18th, 4781 adult steelhead had been counted and at Rocky Reach Dam, 3821 adult steelhead had been counted so far this season. At Willamette Falls Dam, the 2009 count for steelhead was 17126, as of August 19th. This year's steelhead count is only about 91.8% of the 2008 count of 18646 at Willamette Falls Dam for the same date range.

The 2009 adult sockeye count at Bonneville Dam of 177808 is about 83.2% of the 2008 count of 213586 and about 2.26 times greater than the 10 year average of 78589. In the upper Columbia River at Priest Rapids Dam, the 2009 adult sockeye count of 153436 was about 77.9% of the 2008 count and 2.05 times greater than the 10 year average. Two of the major spawning sites for sockeye in the upper Columbia River zone are Lake Wenatchee and Lake Osoyoos (Okanogan basin). In the Snake River at Lower Granite Dam the 2009 adult sockeye count of 1214 was about 1.37 times greater than the 2008 count of 886 and 9.63 times greater than the 10 year average count of 126.

The 2009 adult coho count at Bonneville Dam is 3861 adults and 906 jacks. The Bonneville 2009 adult coho count has 3700 more adult coho than 2008 and 3408 more adult coho salmon than the 10 year average. Five chum and one pink salmon have been observed at Bonneville Dam so far this season. In 2008, 5 chum and 59 pink salmon had been observed by this date. As of August 13th at Bonneville Dam, the adult Shad count was 1373679 which was about 64.0% of the 2008 count of 2144339 and only about 44.0% of the 10 year average count of 3118272.

The posting of the daily fish counts have been delayed several days this week on the Corp of Engineers website due to computer problems. The COE is working on fixing the problems. FPC staff called project count stations and requested fish count data. The counts for BON, TDA, JDA, LGS, LMN and LGR have been updated with the data we have received over the phone from the COE fish counters.

The data for 8/20 at these sites are preliminary data.

* See sampling comments <http://www.fpc.org/currentDaily/smpcomments.htm>

Smolt indices, clipped & unclipped or combined, are presented in the following order: yearling chinook (chinook 1's), subyearling chinook (chinook 0's), steelhead, coho, and sockeye. Two classes of fish counts are shown in these tables: collection counts, which account for sample rates but are not adjusted for flow; and passage indices, which are collection counts divided by the proportion of water passing through the sampled powerhouse. Passage indices are not population estimates, but are used to adjust collection counts for daily fluctuations in the site's or project's operations. The classes of counts presented in the report are defined below for each site. Most samples occur over a 24-hr period that spans two calendar days. In this report, the date shown corresponds with the sample end date.

Definitions for Smolt Index Counts

- WTB (Collection) = Salmon River Trap at Whitebird : Collection Counts
- IMN (Collection) = Imnaha River Trap : Collection Counts
- GRN (Collection) = Grande Ronde River Trap : Collection Counts
- LEW (Collection) = Snake River Trap at Lewiston : Collection Counts
- LGR (Index) = Lower Granite Dam Bypass Collection System : Passage Index Counts
 Passage Index = Collection Counts / {Powerhouse Flow / (Powerhouse Flow + Spill)}
- LGS (Index) = Little Goose Bypass Collection System : Passage Index Counts
 Passage Index = Collection Counts / {Powerhouse Flow / (Powerhouse Flow + Spill)}
- LMN (Index) = Lower Monumental Dam Bypass Collection System : Passage Index Counts
 Passage Index = Collection Counts / {Powerhouse Flow / (Powerhouse Flow + Spill)}
- RIS (Index) = Rock Island Dam Second Powerhouse Bypass Trap : Passage Index Counts
 Passage Index = Collection Counts / {Powerhouse 2 Flow / (Powerhouse 1 & 2 Flow + Spill)}
- MCN (Index) = McNary Dam Bypass Collection System : Passage Index Counts
 Passage Index = Collection Counts / {Powerhouse Flow / (Powerhouse Flow + Spill)}
- JDA (Index) = John Day Dam Bypass Collection System : Passage Index Counts
 Passage Index = Collection Counts / {Powerhouse Flow / (Powerhouse Flow + Spill)}
- BO2 (Index) = Bonneville Dam Second Powerhouse Bypass Collection System : Passage Index Counts
 Passage Index = Collection Counts / {Powerhouse 2 Flow / (Powerhouse 1 & 2 Flow + Spill)}

JDA and BO2 data collected for the FPC by Pacific States Marine Fisheries Commission.
 RIS data collected for the FPC by Chelan Co. PUD/Washington Dept. of Fish and Wildlife.
 LGR, LMN, and MCN data collected for the FPC by Washington Dept. of Fish and Wildlife.
 LGS and GRN data collected for the FPC by Oregon Dept. of Fish and Wildlife.
 IMN data collected for the FPC by the Nez Perce Tribe.

PRD does not post wild steelhead numbers. These numbers were collected from USACE, Grant PUD, Douglas PUD, Chelan PUD, ODFW and DART. Wild steelhead numbers are included in the total. Wild Steelhead are defined as unclipped fish. Historic counts (pre-1996) were obtained from CRITFC and compiled by the FPC. Historic counts 1997 to present were obtained from the Corps of Engineers.

Page last updated on: 08/21/09

BON counts from January 1, 2009 to March 14, 2009 (historical counts begin March 15):

Year	Chinook Adult	Chinook Jack	Steelhead	Wild Steelhead
2009	19	-1	321	109
2008	42	0	561	270
