

Fish Passage Center

Weekly Report #09 - 27

September 11, 2009

1827 NE 44th Ave., Suite 240
Portland, OR 97213
phone: 503/230-4099
fax: 503/230-7559

Summary of Events:

Water Supply: Precipitation throughout the Columbia Basin has varied between 15% and 247% of average at individual sub-basins through September. Precipitation above The Dalles has been 105% of average over September. Over the entire water year, precipitation has generally been near average.

Table 1. Summary of September Precipitation and cumulative October through September precipitation with respect to average (1971-2000), at select locations within the Columbia and Snake River Basins.

Location	Water Year 2009 September 1-7		Water Year 2009 October 1, 2008 to September 7, 2009	
	Observed (inches)	% Average	Observed (inches)	% Average
Columbia Above Coulee	0.45	119	22.21	91
Snake River Above Ice Harbor	0.05	22	19.43	113
Columbia Above The Dalles	0.32	105	22.41	100
Kootenai	0.51	135	21.91	88
Clark Fork	0.13	45	17.87	105
Flathead	0.17	44	20.29	91
Pend Oreille/ Spokane	0.24	69	28.64	95
Central Washington	0.20	192	7.23	82
Snake River Plain	0.03	15	12.73	116
Salmon/Boise/ Payette	0.14	15	19.02	98
Clearwater	0.10	25	32.18	108
SW Washington Cascades/ Cowlitz	1.80	247	62.19	90
Willamette Valley	0.81	163	49.42	85

The summer flow period began on 6-21-09 at Lower Granite Dam and ended on 8-31-09; the flow objective was 52.5 Kcfs. Flows at Lower Granite averaged 48.2 Kcfs over the summer period.

The summer flow period began on 7-1-09 at McNary Dam and ended on 8-31-09; the flow objective was 200 Kcfs. Flows at McNary Dam averaged 141.8 Kcfs over the summer period.

Grand Coulee was at 1277.9 feet on September 10, 2009, refilling 0.7 feet last week. Grand Coulee is expected to target elevation 1283 feet by the end of September. Outflows at Grand Coulee have ranged between 39.3 and 51.3 Kcfs over the last week.

The Libby Reservoir is currently at elevation 2442.9 feet (9-10-09) and has held steady last week. Outflows at Libby are currently 6 Kcfs and will remain at this level through September.

Hungry Horse is currently at an elevation of 3552.3 ft (9-10-09) and has drafted 1.2 feet last week. Outflows at Hungry Horse have been approximately 2.5 Kcfs last week. The BOR plans to draft Hungry Horse to elevation 3550 by the end of September.

Dworshak is currently at an elevation of 1523.2 feet (9-10-09) and has drafted 6.7 feet last week. Outflows at Dworshak are currently 8.0-8.3 Kcfs. Dworshak is expected to draft to elevation 1520 feet by mid-September.

The Brownlee Reservoir was at an elevation of 2053.5 feet on September 10th, 2009 drafting 1.2 feet last week. Outflows at Brownlee Dam have been 9.3 to 14.3 Kcfs over the last week.

Adult Fish Passage:

Daily counts of adult fall Chinook ranged from 5477 to 10122. The 2009 adult fall Chinook count of 205881 was about 91.7% of the 2008 count and about 93.9% of the 10 year average. The fall Chinook jack count of 71667 was about 2.94 times greater than the 2008 count and about 3.91 times greater than the 10 year average. The adult fall Chinook count total at The Dalles Dam of 106659 is about 51.8% of the Bonneville passage to date. The 2009 Lower Granite Dam adult

fall Chinook count of 5641 is about 77.3% of the 2008 count and about 2.39 times greater than the 10 year average count. The 2009 Lower Granite fall Chinook jack count of 9668 is about 6.97 times greater than the 2008 count and about 17.7 times greater than the 10 year average.

Daily steelhead counts at Bonneville Dam for the past week ranged between 3330 and 6755. The Bonneville Dam 2009 steelhead count of 537171 is about 1.76 times greater than the 2008 count and 1.85 times greater than the 10 year average. During this time of year, there are times when there are higher steelhead counts at upstream projects compared to downstream projects. The higher counts of steelhead at upstream sites compared to downstream sites in any particular year is because some steelhead spend the winter between sites, for instance between Ice Harbor and Lower Granite, and then start their migration upstream the following year. The summer steelhead run is delineated according to dates of passage past Bonneville Dam and is made up of two components. A-run steelhead pass Bonneville Dam from the first of June through August 25th and B-run steelhead pass Bonneville from August 26th through October. The 2009 B-run steelhead began on August 26th at Bonneville Dam and was 93185 as of September 10th. The 2009 B-run steelhead count is about 1.18 times greater than the 2008 count of 79120 and is about 1.58 times greater than the 10 year average count of 59081.

In the Snake River, this year's Lower Granite total steelhead count of 66133 is about 1.76 times greater than the 2008 count of 37544 and 2.56 times greater than the 10 year average of 25966. The 2009 wild steelhead count as of September 10th was 19513. At Rock Island Dam, as of September 7th, 9856 adult steelhead had been counted and at Rocky Reach Dam, 7634 adult steelhead had been counted so far this season. At Willamette Falls Dam, the 2009 count for steelhead was 17254, as of August 31st. This year's steelhead count is only about 92.2% of the 2008 count of 18718 at Willamette Falls Dam for the same date range.

The 2009 adult coho count at Bonneville Dam is 88040 adults and 3995 jacks. The Bonneville 2009 adult coho count is about 1.75 times greater than the 2008 count of 50088 and is about 2.08 times greater than the 10 year average count of 42280. The 2009 coho jack count of 3995 is about 1.02 times greater than the 2008 count of 3911 and is about 1.73 times greater than the 10 year average count of 2305 at Bonneville

Dam.

The posting of the daily fish counts have been delayed a few days this week on the Corp of Engineers website due to computer problems. The COE is working on fixing the problems. FPC staff downloaded each project station estimated count files and summarized the data. The data for 9/10 are preliminary data.

Smolt Monitoring:

Subyearling Chinook smolts continue to decline in numbers throughout the system. Unclipped subyearlings predominate at all the sites at this time suggesting that many of the late season outmigrant fish are of wild origin. It should be noted however, that a good portion of hatchery origin fish were unmarked as well.

At Lower Granite Dam subyearling Chinook predominated with coho smolt numbers second in prevalence but at very low numbers. Average daily passage index for subyearling Chinook was at 73 per day this week compared to 90 per day last week. At Little Goose Dam the subyearling Chinook indices decreased this week with the daily average index at 58 per day this week compared to 92 last week. Nearly 90 percent of the subyearling Chinook passing Lower Granite Dam were unclipped in the past two weeks. The proportion of unclipped smolts increased to nearly 95 percent by the end of this week. Almost all PIT-tag detects in the past ten day were of fish released from Big Canyon Creek in the Clearwater River during late June to early July.

In the lower Columbia River, at McNary Dam, subyearling Chinook the weekly average passage index dropped this week with the passage index averaging 287 for this week compared to 606 daily average index last week. John Day and Bonneville Dam continue to limit sampling due to high temperatures at those projects. Subyearling Chinook weekly average passage indices dropped from nearly 600 per day last week to about 350 per day this week at Bonneville Dam.

John Day Dam smolt monitoring is scheduled to end September 15 and GBT sampling ended August 31, with the completion of spill operations.

Hatchery Release:

Snake River Zone: The Snake River Zone encompasses the Snake River and its tributaries from its confluence with the Columbia River to Hells Canyon Dam. There were no releases of juvenile salmonids scheduled for this week. Furthermore, no releases of juvenile salmonids are scheduled to begin over the next

two weeks.

Mid-Columbia Zone: The Mid-Columbia Zone encompasses the area of the Columbia River and its tributaries from McNary Dam to Chief Joseph Dam. There were no scheduled releases of juvenile salmonids to this zone this week. There are no releases of juvenile salmonids to this zone over the next two weeks.

Lower Columbia Zone: The Lower Columbia Zone is defined as the Columbia River and its tributaries from Bonneville Dam to McNary Dam. No releases of juvenile salmonids were scheduled for this zone over the past week. Furthermore, there are no releases scheduled for this zone over the next two weeks.

* See sampling comments <http://www.fpc.org/currentDaily/smpcomments.htm>

Smolt indices, clipped & unclipped or combined, are presented in the following order: yearling chinook (chinook 1's), subyearling chinook (chinook 0's), steelhead, coho, and sockeye. Two classes of fish counts are shown in these tables: collection counts, which account for sample rates but are not adjusted for flow; and passage indices, which are collection counts divided by the proportion of water passing through the sampled powerhouse. Passage indices are not population estimates, but are used to adjust collection counts for daily fluctuations in the site's or project's operations. The classes of counts presented in the report are defined below for each site. Most samples occur over a 24-hr period that spans two calendar days. In this report, the date shown corresponds with the sample end date.

Definitions for Smolt Index Counts

WTB (Collection) = Salmon River Trap at Whitebird : Collection Counts

IMN (Collection) = Imnaha River Trap : Collection Counts

GRN (Collection) = Grande Ronde River Trap : Collection Counts

LEW (Collection) = Snake River Trap at Lewiston : Collection Counts

LGR (Index) = Lower Granite Dam Bypass Collection System : Passage Index Counts

Passage Index = Collection Counts / {Powerhouse Flow / (Powerhouse Flow + Spill)}

LGS (Index) = Little Goose Bypass Collection System : Passage Index Counts

Passage Index = Collection Counts / {Powerhouse Flow / (Powerhouse Flow + Spill)}

LMN (Index) = Lower Monumental Dam Bypass Collection System : Passage Index Counts

Passage Index = Collection Counts / {Powerhouse Flow / (Powerhouse Flow + Spill)}

RIS (Index) = Rock Island Dam Second Powerhouse Bypass Trap : Passage Index Counts

Passage Index = Collection Counts / {Powerhouse 2 Flow / (Powerhouse 1 & 2 Flow + Spill)}

MCN (Index) = McNary Dam Bypass Collection System : Passage Index Counts

Passage Index = Collection Counts / {Powerhouse Flow / (Powerhouse Flow + Spill)}

JDA (Index) = John Day Dam Bypass Collection System : Passage Index Counts

Passage Index = Collection Counts / {Powerhouse Flow / (Powerhouse Flow + Spill)}

BO2 (Index) = Bonneville Dam Second Powerhouse Bypass Collection System : Passage Index Counts

Passage Index = Collection Counts / {Powerhouse 2 Flow / (Powerhouse 1 & 2 Flow + Spill)}

JDA and BO2 data collected for the FPC by Pacific States Marine Fisheries Commission.

RIS data collected for the FPC by Chelan Co. PUD/Washington Dept. of Fish and Wildlife.

LGR, LMN, and MCN data collected for the FPC by Washington Dept. of Fish and Wildlife.

LGS and GRN data collected for the FPC by Oregon Dept. of Fish and Wildlife.

IMN data collected for the FPC by the Nez Perce Tribe.

PRD does not post wild steelhead numbers. These numbers were collected from USACE, Grant PUD, Douglas PUD, Chelan PUD, ODFW and DART. Wild steelhead numbers are included in the total. Wild Steelhead are defined as unclipped fish. Historic counts (pre-1996) were obtained from CRITFC and compiled by the FPC. Historic counts 1997 to present were obtained from the Corps of Engineers.

Page last updated on: 09/11/09

BON counts from January 1, 2009 to March 14, 2009 (historical counts begin March 15):

Year	Chinook Adult	Chinook Jack	Steelhead	Wild Steelhead
2009	19	-1	321	109
2008	42	0	561	270
