

Fish Passage Center

Weekly Report #10 - 12

June 4, 2010

1827 NE 44th Ave., Suite 240
 Portland, OR 97213
 phone: 503/230-4099
 fax: 503/230-7559

Summary of Events:

Water Supply: Precipitation throughout the Columbia Basin has varied between 79% and 134% of average at individual sub-basins over May. Precipitation above The Dalles has been 96% of average over May. Over the 2010 water year, precipitation has ranged between 75% and 89% of average.

Table 1. Summary of May precipitation and cumulative October through May precipitation with respect to average (1971-2000), at select locations within the Columbia and Snake River Basins.

Location	Water Year 2010 May 1-24		Water Year 2010 October 1, 2009 to May 24, 2010	
	Observed (inches)	% Average	Observed (inches)	% Average
	Columbia Above Coulee	1.40	81	14.05
SNAKE RIVER Above Ice Harbor	1.41	97	11.59	88
Columbia Above The Dalles	1.46	96	14.92	85
Kootenai	1.37	80	14.58	81
Clark Fork	1.30	82	8.91	75
Flathead	1.70	90	13.58	87
Pend Oreille/ Spokane	1.59	79	19.76	81
Central Washington	0.57	95	6.27	88
SNAKE RIVER Plain	1.15	101	7.24	87
Salmon/Boise/ Payette	1.46	106	14.0	89
Clearwater	2.19	94	19.57	83
SW Washington Cascades/Cowlitz	3.94	134	54.04	88
Willamette Valley	3.34	122	46.51	88

Table 2 displays the May Final and June Early runoff volume forecasts for multiple reservoirs. The current forecast at The Dalles between January and July is 71300 Kaf (66% of average).

Table 2. May Final and June Early Runoff Volume Forecasts for various reservoirs within the Columbia and Snake River Basins.

Location	May Final		June Early	
	% Average (1971 -2000)	Probable Runoff Volume (Kaf)	% Average (1971 -2000)	Probable Runoff Volume (Kaf)
The Dalles (Jan-July)	66	70900	66	71300
Grand Coulee (Jan- July)	74	46400	72	45600
Libby Res. Inflow, MT (Apr-Aug)	69 77*	4310 4887*	69	4340
Hungry Horse Res. Inflow, MT (Jan-July)	74	1640	71	1570
Lower Granite Res. Inflow (Apr- July)	58	12400	62	13300
Brownlee Res. Inflow (Apr-July)	44	2780	46	2910
Dworshak Res. Inflow (Apr-July)	55 57*	1460 1526*	59	1560

* Denotes COE Forecast

The Biological Opinion flow period began on April 3rd in the lower Snake River (Lower Granite). According to the April Final Water Supply Forecast, the flow objective this spring is 85 Kcfs at Lower Granite. Flows at Lower Granite Dam have averaged 57.2 Kcfs from April 3 to June 3 and 84.6 Kcfs last week.

The Biological Opinion flow period began on April 10th in the mid and lower Columbia River (Priest Rapids and McNary Dams). According to the April Final Water Supply Forecast, the flow objective this spring is 220 Kcfs at McNary and 135 Kcfs at Priest Rapids. Flows from April 10 to June 3 have averaged 174.4 Kcfs at McNary Dam and 108.2 Kcfs at Priest Rapids Dam. Over the last week, flows have averaged 212.0 Kcfs at McNary Dam and 124.1 Kcfs at Priest Rapids Dam. Grand Coulee Reservoir is at 1273.1 feet (6-3-10) and refilled 7.8 feet over the last week. Outflows at Grand Coulee have ranged between 64.3 and 121.5 Kcfs over the last week. Outflows from Grand Coulee continue to be managed to achieve flows of 125-135 Kcfs at Priest Rapids Dam.

The Libby Reservoir is currently at elevation 2420.6 feet (6-3-10) and has refilled 1.9 feet last week. Outflows at Libby are currently 17.7 Kcfs. The COE released its May Final forecast at Libby Dam on May 7th, 2010 which was 4887 Kaf (April-August) which puts Libby in a Tier 2 sturgeon operation in 2010. It is expected that the sturgeon pulse (full powerhouse outflows) will occur in early to middle June. Inflows to Libby have been increasing over the last week, ranging from 17.0 Kcfs to 29.4 Kcfs.

Hungry Horse is currently at an elevation of 3544.0 feet (6-3-10) and has refilled 4.8 feet last week. Outflows at Hungry Horse have been approximately 4.0 Kcfs last week. Inflows to Hungry Horse Dam have been increasing over the last week, ranging between 10.0 Kcfs to 17.1 Kcfs.

Dworshak is currently at an elevation of 1585.4 feet (6-3-10) and has refilled approximately 8.3 feet last week. Outflows from Dworshak have been 1.2 Kcfs. Inflows to Dworshak have been increasing over the last week, ranging between 8.8 to 21.4 Kcfs.

The Brownlee Reservoir was at an elevation of 2073.5 feet on June 3, 2010 refilling 0.2 feet last week. Over the last week, outflows at Brownlee have ranged between 18.6-23.5 Kcfs. Inflows to Brownlee have increased from 20.5 Kcfs to 22.7 Kcfs over the last week.

Spill:

The 2010 planned spring spill program at the lower Snake River Projects began on April 3 at 0001 hours. The following table shows the planned operations for spring 2010.

Project	Day/Night Spill
Lower Granite	20Kcfs/20Kcfs
Little Goose	30%/30%
Lower Monumental	Gas Cap/Gas Cap
Ice Harbor	April 3-April 28: 45 Kcfs/Gas Cap April 29-June 20: 30%/30% vs. 45 Kcfs/Gas Cap

Recent rain and snow melt significantly increased flows in the Snake River by week's end. Spill at Lower Granite Dam met the 20 Kcfs instantaneous level over most of the past week, and increased dramatically to near 80 Kcfs on June 3rd. Spill at Little Goose Dam achieved the 30% of instantaneous flow for most of the week, but missed it slightly on June 3rd. The project spill cap was set too low to allow achieving the 30% as flows increased, even though the project TDG was not exceeding waiver limits. Spill at Lower Monumental Dam was relatively constant over the past week, near the gas cap of 27 Kcfs, except for June 3rd when the increased flows resulted in increased spill with a daily average spill of 31.3 Kcfs. The Ice Harbor simulated test of 30% spill versus 45 Kcfs during daytime hours and gas cap spill during nighttime hours began on April 29. Spill at Ice Harbor Dam occurred as 45 Kcfs during daytime hours, and spill to the gas cap during nighttime hours, or as 30% spill, in two-day blocks.

The 2010 spill program at the lower Columbia River projects began at 0001 hours on April 10th. The following table shows the planned operations for spring 2010.

Project	Day/Night Spill
McNary	40%/40%
John Day	Pre-test: 30%/30% Testing: 30%/30% vs. 40%/40%
The Dalles	40%/40%
Bonneville	100 Kcfs/100 Kcfs

The planned spill levels were met at McNary Dam, and exceeded the 40% on June 3rd due to the higher flow levels. At John Day Dam the testing of 30% spill versus 40% spill occurred in two-day blocks. The objectives of the study were met except for June 3rd, when the gas cap implemented by the COE prevented the project from meeting the 40% spill level. The planned spill levels were met at The Dalles over the past week, except for June 3rd, where again, the gas cap implemented by the COE did not allow for the project to meet the objective. At Bonneville Dam spill met the 100 Kcfs spill level, except for June 2 to June 3rd, when the spill was reduced to address the TDG levels at the Camas/Washougal TDG gage, which is not a required point of compliance.

At present, GBT monitoring is being implemented at Lower Granite, Little Goose, Lower Monumental, McNary, Bonneville and Rock Island dams. One fish was reported with Rank 1 signs of fin GBT this past week at Rock Island Dam (1%) and one fish at Little Goose Dam. These levels of incidence are well below the action criteria of 15%.

All of the tailrace TDG monitors reported TDGS levels below the State Waiver limits, with the exception of June 3rd when the TDG recorded below Lower Granite Dam exceeded 120%. One forebay exceedence was reported at Camas/Washougal on June 1, when the TDG registered 115.7%. However, this location is not a required point of compliance for the water quality waivers.

Smolt Monitoring:

Subyearling Chinook collections at Snake River dams increased over the past week as the summer migrants began to predominate in passage at Lower Granite Dam. Collections of yearling Chinook and steelhead at Snake River dams have declined over the past week. Traps operated for SMP at the Salmon River, at Lewiston on the Snake River and on the Grande Ronde River in Oregon, have completed sampling for the season. Collections of sockeye and coho at Rock Island Dam have begun to decrease, while sockeye collections at McNary Dam have increased dramatically.

At Lower Granite Dam passage indices for all spring migrants declined over the past two weeks, while subyearling Chinook indices have begun to increase rapidly. Indices for subyearling Chinook averaged 16,000 per day this week compared to just over 2,000 per day last week. The index for subyearling Chinook

reached 50,000 on June 3 indicating that the summer migrants are likely to predominate for the rest of the season.

Rock Island Dam bypass trap has collected an unusually large number of smolts the past two weeks. The crew had to take the unusual step of diverting water away from the trap 12 hours a day due to high numbers of fish in the trap. Coho and sockeye were the predominant species being collected at the site the past several days. The Passage indices for coho and sockeye have decreased over the past week. The average index for sockeye was 3,600 per day last week but dropped to 170 per day this week, while coho indices averaged 2,800 per day last week and are down to just over 1,200 per day this week. The SMP crew went back to 24 hour sampling on June 2 at Rock Island Dam.

At McNary Dam sockeye have predominated over the past week. Indices for sockeye averaged 270,000 per day this week compared to 37,000 for yearling Chinook and 7,700 for steelhead during that same period. Subyearling Chinook indices at McNary Dam increased only slightly above last week with the average index increasing from 4,300 to 5,300 from last week to this week.

At Bonneville Dam the largest collections over the past week have been sockeye and steelhead followed by yearling Chinook. Yearling Chinook indices continued to decline this week with the index average 19,000 this week compared to 70,000 per day last week. For sockeye the passage index averaged 50,000 this week compared to 15,000 last week. Steelhead indices were up from last week; the passage index averaged 29,000 per day this week compared to 22,000 per day last week.

Hatchery Release:

Snake River Zone: The Snake River Zone encompasses the Snake River and its tributaries from its confluence with the Columbia River to Hells Canyon Dam. Releases of Snake River subyearling fall Chinook surrogates that began in mid-May were scheduled to end sometime this week. In all, approximately 230,000 Snake River fall Chinook surrogates were scheduled for release this year. These Snake River surrogates are 100% unmarked, but are tagged with PIT-tags. In addition to the continued Snake River surrogate release, there was one other release of subyearling fall Chinook scheduled for this week. Approximately 500,000 subyearlings were scheduled to be released from the Nez Perce Tribal Hatchery into the Clearwater River

this week. Of these, about 40% are unmarked.

Three releases of subyearling fall Chinook juveniles to the Clearwater River and its tributaries are scheduled to take place over the next two weeks. In all, these releases total approximately 498,000 juveniles. Of these, 400,000 are production fall Chinook that will be released from the Cedar Flats and Lukes Gulch acclimation facilities in mid-June. All of these production subyearlings are marked with either an adipose fin clip or a coded-wire-tag. The remaining 98,000 subyearlings that are scheduled for release over the next two weeks are fall Chinook surrogates. These Clearwater River surrogate releases are scheduled to begin in mid-June and run through early July. As with the Snake River surrogates, the Clearwater River surrogates are 100% unmarked but are tagged with PIT-tags.

Mid-Columbia Zone: The Mid-Columbia Zone encompasses the area of the Columbia River and its tributaries from McNary Dam to Chief Joseph Dam. There were no releases of juvenile salmonids scheduled to begin this week in this zone. However, several volitional releases of coho to the Yakima River that began in April were scheduled to end sometime this week. These coho releases are part of the Yakama Tribal Program to re-introduce coho to the Yakima River. This Yakama Tribal Program also released coho juveniles into the Methow, Wenatchee, and Mid-Columbia River this year.

Beginning next week, nearly 10.3 million subyearling fall Chinook are scheduled for release in this river zone. These fall Chinook subyearlings are to be released directly into the Mid-Columbia River from Ringgold Springs and Priest Rapids hatcheries, both of which are located below Priest Rapids Dam. These releases are volitional and are scheduled to run through mid to late June. The only other release of juvenile salmonids scheduled to begin over the next two weeks is a release of 800,000 subyearling summer Chinook from Turtle Rock Hatchery into the Mid-Columbia River. Of these subyearling summer Chinook, about 75% are unmarked.

Lower Columbia Zone: The Lower Columbia Zone is defined as the Columbia River and its tributaries from Bonneville Dam to McNary Dam. There were no releases of juvenile salmonids scheduled to begin this week in this zone. However, a volitional release of nearly 213,000 yearling spring Chinook to the Deschutes River was scheduled to end this week. This release began in mid-April.

Over the next two weeks, approximately 4.5 million subyearling fall Chinook will be released from Little White Salmon NFH into the Little White Salmon River. Currently, this release is scheduled to take place on June 17th.

Adult Fish Passage:

The summer Chinook count began June 1st at Bonneville Dam. Daily passage numbers at Bonneville Dam ranged between 3275 and 3804 adult summer Chinook in the last week. The 2010 summer Chinook count of 10358 is about 1.73 times greater than the 2009 count and 2.5 times greater than the 10 year average. The 2010 Bonneville Dam summer Chinook jack count of 978 is only about 36.8% of the 2009, however, it is 1.44 times greater than the 10 year average of 678. Adult spring Chinook counts at Bonneville Dam ended on May 31st. The total 2010 spring Chinook count of 244362 was about 2.13 times greater than the 2009 count and about 1.46 times greater than the 10 year average. The 2010 Bonneville Dam spring Chinook jack count of 12613 is only about 18.9% of the 2009 count and 72.9% of the 10 year average. At Willamette Falls 42169 adult spring Chinook have been counted so far this year. The 2010 adult spring Chinook count at Willamette Falls is 2.86 times greater than the 2009 count of 14770. At McNary Dam 142099 adult spring Chinook have been counted. The 2010 adult spring Chinook count at McNary Dam is about 2.22 times greater than the 2009 count and about 1.6 times greater than the 10 year average. The 2010 McNary Dam spring Chinook jack count of 8204 is only about 20.12% of the 2009 count and is only about 77.8% of the 10 year average count. The 2010 adult spring Chinook count at Rock Island Dam of 26417 is about 2.93 times greater than the 2009 count and 1.96 times greater than the 10 year average. The 2010 adult spring Chinook count at Lower Granite Dam of 82084 is about 2.38 times greater than the 2009 count and about 1.7 times greater than the 10 year average. The 2010 Lower Granite spring Chinook jack count of 5433 is only about 22.9% of the 2009 count and about 90.4% of the 10 year average.

The Bonneville Dam 2010 steelhead count of 8087 is about 1.6 times greater than the 2009 count of 5027. The 2010 steelhead count is about 1.67 times greater than of the 10 year average of 4839. In the Snake River, this year's Lower Granite steelhead count of 10476 is about 97.13% of the 2009 count. The 2010 LGR steelhead count is about 1.23 times greater than the 10 year average count of 8537. The 2010 LGR wild

steelhead count as of June 3rd was 4177. At Rock Island Dam, as of June 2nd, 114 adult steelhead had been counted and at Rocky Reach Dam 351 adult steelhead had been counted. At Willamette Falls Dam, the 2010 count for steelhead was 17635, as of May 28th. This year's steelhead count is only about 2.18 times greater than the 2009 count of 8059 at Willamette Falls Dam for the same date range.

Daily adult sockeye passage numbers at Bonneville Dam ranged between 5 and 168 last week. The 2010 adult sockeye count at Bonneville Dam of 606 is about 1.98 times greater than the 2009 count of 306 and about 3.16 times greater than the 10 year average count of 192.

Hatchery Releases Last Two Weeks

* See sampling comments <http://www.fpc.org/currentDaily/smpcomments.htm>

Smolt indices, clipped & unclipped or combined, are presented in the following order: yearling chinook (chinook 1's,) subyearling chinook (chinook 0's), steelhead, coho, and sockeye. Two classes of fish counts are shown in these tables: collection counts, which account for sample rates but are not adjusted for flow; and passage indices, which are collection counts divided by the proportion of water passing through the sampled powerhouse. Passage indices are not population estimates, but are used to adjust collection counts for daily fluctuations in the site's or project's operations. The classes of counts presented in the report are defined below for each site. Most samples occur over a 24-hr period that spans two calendar days. In this report, the date shown corresponds with the sample end date.

Definitions for Smolt Index Counts

- WTB (Collection) = Salmon River Trap at Whitebird : Collection Counts
- IMN (Collection) = Imnaha River Trap : Collection Counts
- GRN (Collection) = Grande Ronde River Trap : Collection Counts
- LEW (Collection) = Snake River Trap at Lewiston : Collection Counts
- LGR (Index) = Lower Granite Dam Bypass Collection System : Passage Index Counts
Passage Index = Collection Counts / {Powerhouse Flow / (Powerhouse Flow + Spill)}
- LGS (Index) = Little Goose Bypass Collection System : Passage Index Counts
Passage Index = Collection Counts / {Powerhouse Flow / (Powerhouse Flow + Spill)}
- LMN (Index) = Lower Monumental Dam Bypass Collection System : Passage Index Counts
Passage Index = Collection Counts / {Powerhouse Flow / (Powerhouse Flow + Spill)}
- RIS (Index) = Rock Island Dam Second Powerhouse Bypass Trap : Passage Index Counts
Passage Index = Collection Counts / {Powerhouse 2 Flow / (Powerhouse 1 & 2 Flow + Spill)}
- MCN (Index) = McNary Dam Bypass Collection System : Passage Index Counts
Passage Index = Collection Counts / {Powerhouse Flow / (Powerhouse Flow + Spill)}
- JDA (Index) = John Day Dam Bypass Collection System : Passage Index Counts
Passage Index = Collection Counts / {Powerhouse Flow / (Powerhouse Flow + Spill)}
- BO2 (Index) = Bonneville Dam Second Powerhouse Bypass Collection System : Passage Index Counts
Passage Index = Collection Counts / {Powerhouse 2 Flow / (Powerhouse 1 & 2 Flow + Spill)}

JDA and BO2 data collected for the FPC by Pacific States Marine Fisheries Commission.
RIS data collected for the FPC by Chelan Co. PUD/Washington Dept. of Fish and Wildlife.
LGR, LMN, and MCN data collected for the FPC by Washington Dept. of Fish and Wildlife.
LGS and GRN data collected for the FPC by Oregon Dept. of Fish and Wildlife.
IMN data collected for the FPC by the Nez Perce Tribe.

PRD does not post wild steelhead numbers.
 These numbers were collected from USACE, Grant PUD, Douglas PUD, Chelan PUD, ODFW and DART.
 Wild steelhead numbers are included in the total. Wild Steelhead are defined as unclipped fish.
 Historic counts (pre-1996) were obtained from CRITFC and compiled by the FPC.
 Historic counts 1997 to present were obtained from the Corps of Engineers.

Page last updated on: 06/05/2010

BON counts from January 1, 2009 to March 14, 2010 (historical counts begin March 15):

Year	Chinook Adult	Chinook Jack	Steelhead	Wild Steelhead
2010	39	0	2,318	657
2009	19	-1	321	109
