

Fish Passage Center

Weekly Report #11 - 18

July 15, 2011

1827 NE 44th Ave., Suite 240
 Portland, OR 97213
 phone: 503/230-4099
 fax: 503/230-7559

Summary of Events:

Water Supply: Precipitation throughout the Columbia Basin has varied between 2% and 66% of average at individual sub-basins over July. Precipitation above The Dalles has been 44% of average over July. Over the 2011 water year, precipitation has ranged between 108% and 137% of average.

Table 1. Summary of July precipitation and cumulative October through July precipitation with respect to average (1971-2000), at select locations within the Columbia and Snake River Basins.

Location	Water Year 2011 July 1-11, 2011		Water Year 2011 October 1, 2010 to July 11, 2011	
	Observed (inches)	% Average	Observed (inches)	% Average
	Columbia Above Coulee	0.42	66	24.46
SNAKE RIVER ABOVE ICE HARBOR	0.07	22	19.63	127
Columbia Above The Dalles	0.19	44	24.36	121
Kootenai	0.42	63	24.09	111
Clark Fork	0.05	13	17.84	122
Flathead	0.23	41	24.59	127
Pend Oreille/ Spokane	0.08	17	32.83	118
Central Washington	0.00	2	9.06	112
SNAKE RIVER PLAIN	0.07	32	24.12	137
Salmon/Boise/ Payette	0.05	16	20.19	113
Clearwater	0.07	13	35.01	128
SW Washington Cascades/Cowlitz	0.02	5	71.24	108
Willamette Valley	0.02	7	60.76	108

Table 2 displays the June Final and July Final runoff volume forecasts for multiple reservoirs. The July Final forecast at The Dalles between January and July is 142000 Kaf (132% of average).

Table 2. June Final and July Final Runoff Volume Forecasts for various reservoirs within the Columbia and Snake River Basins.

Location	June Final		July Final	
	% Average (1971 -2000)	Probable Runoff Volume (Kaf)	% Average (1971 -2000)	Probable Runoff Volume (Kaf)
The Dalles (Jan-July)	131	141000	132	142000
Grand Coulee (Jan-July)	124	78300	126	79500
Libby Res. Inflow, MT (Apr-Aug)	127	7930 8099*	129	8090
Hungry Horse Res. Inflow, MT (Jan-July)	153	3410	154	3430
Lower Granite Res. Inflow (Apr- July)	156	33700	159	34200
Brownlee Res. Inflow (Apr-July)	177	11200	173	10900
Dworshak Res. Inflow (Apr-July)	143	3770 3813*	149	3940

* Denotes COE Forecast

The flow objective at Lower Granite over the summer period (June 21st to August 31st) is 55 Kcfs; over the summer period flows at Lower Granite have averaged 143.7 Kcfs and 102.6 Kcfs over the last week.

The summer flow objective period began at McNary Dam on July 1st with a flow objective of 200 Kcfs. Over the summer flow period, flows at McNary have averaged 381.1 Kcfs and 353.4 Kcfs last week.

Grand Coulee Reservoir is at 1289.8 feet (7-14-11) and has refilled 2.1 feet over the last week. Grand Coulee is currently 0.2 feet from full (1290 feet). Outflows at Grand Coulee have ranged between 202.2 and 218.1 Kcfs over the last week.

The Libby Reservoir is currently at elevation 2443.8 feet (7-14-11) and has refilled 5.9 feet last week. Libby is currently 15.2 feet from full (2459 feet). Outflows at Libby Dam have been 11.0-15.0 Kcfs last week.

Hungry Horse is currently at an elevation of 3554.9 feet (7-14-11) and has refilled 3.6 feet last week. Hungry Horse is currently 5.1 feet from full (3560 feet). Outflows at Hungry Horse have been 6.8-9.4 Kcfs last week.

Dworshak is currently at an elevation of 1599.3 feet (7-14-11) and has drafted 0.4 feet last week. Dworshak is currently 0.7 feet from full (1600 feet). Outflows from Dworshak have ranged between 10.4-14.5 Kcfs last week.

The Brownlee Reservoir was at an elevation of 2074.3 feet on July 14th, 2011 holding steady last week. Brownlee is currently 2.7 feet from full (2077 feet). Over the last week, outflows at Brownlee have ranged between 20.9-25.8 Kcfs.

Spill:

Spill levels transitioned from spring to summer levels for fish passage on June 21st at the lower Snake River projects. Flows have decreased steadily over the past week. By week's end Lower Snake River projects in the FCRPS were spilling to the Biological Opinion summer spill requirements.

Spill has occurred at Dworshak Dam this past week as the project is full and passing inflow. Over the past week, daily average flows at Lower Granite Dam have ranged from 89.5 to 122.8 Kcfs, and spill has ranged from 18.6 to 34 Kcfs. At Little Goose Dam, spill met, or slightly exceeded, the 30% of instantaneous flow Court Order through the week. Daily average spill at Little Goose dam has ranged from 26.5 Kcfs to 36.3 Kcfs. At Lower Monumental Dam spill was spill ranged from 16.9 to 23.8 Kcfs over

the past week.

Beginning April 28th, the Court Order spill operations at Ice Harbor called for an alternating schedule of 45 Kcfs spill during the day and gas cap spill at night versus 30% if instantaneous flow, on 2-day alternating blocks until mid-July. Beginning July 13, spill levels were changed to the 45 Kcfs/gas cap levels, which will continue through the rest of the summer period. Over the past week spill levels have met or exceeded the Court Order and spill has ranged from 37.8 to 62.3 Kcfs.

Project	Day/Night Spill
Lower Granite	18 Kcfs/18 Kcfs
Little Goose	30%/30%
Lower Monumental	17 Kcfs/17 Kcfs
Ice Harbor	April 28-July 12: 45 Kcfs/gas cap vs. 30%/30% July 12 – August 31: 45 Kcfs / gas cap

Summer spill levels were initiated at McNary Dam on June 20th and at Bonneville Dam on June 16th. Summer spill season began at John Day and The Dalles dams on July 1st. Spill is also occurring at Grand Coulee Dam and Chief Joseph Dam. Chief Joseph is now being managed by BPA based on reserves and unit availability.

Spill at McNary Dam has been in excess of the Court Order as a result of flows in excess of hydraulic capacity and unit outages (two units are presently out of service). Spill at McNary Dam has ranged between 57.1% and 64.9% of daily average flow (daily average spill ranged from 182.6 to 254.3 Kcfs) at this project. The planned test at John Day Dam was designed to start on the evening of April 27th. Under this test, spill at John Day Dam alternates between 30% and 40% of instantaneous flow, roughly every two days. However, due to high flows the test conditions were not implementable and the test was not conducted. As flow receded, the planned 40% days were not achieved due to restricting spill based on The Dalles forebay total dissolved gas readings. Spill levels at John Day have ranged from 30.0% to 38.3% of total river flow. At The Dalles Dam, spill was also restricted to less than 40% for the three days of the past week. This reduction is based on the COE's response to

TDG levels in the Bonneville Dam forebay. Finally, at Bonneville Dam, spill exceeded the summer test operations beginning June 16th, with spill ranging from a daily average of 149.6 Kcfs to 193.7 Kcfs.

Project	Day/Night Spill
McNary	50%/50%
John Day	Pre-test: 30%/30% Testing: 30%/30% vs. 40%/40%
The Dalles	40%/40%
Bonneville	June 16 to July 20: alternate between 95 Kcfs/95 Kcfs and 85 Kcfs/121 Kcfs. July 20th - August 31: 75 Kcfs day/GasCap night.

TDG levels this past week have decreased considerably at the FCRPS project tailraces and, with the exception of the McNary tailrace, have been near or less than the 120% criteria. Where and when possible, the COE is limiting spill on the basis of downstream forebay readings of TDG based on the Washington DOE gas standards. Gas Bubble Trauma monitoring at Little Goose Dam showed GBT in 1% of the fish examined on July 11th, with Rank 1 signs. A 3% incidence of GBT was measured at McNary Dam on July 11th. Incidence of GBT at Rock Island Dam remained low this past week. The examination on July 6th showed a 1% incidence of GBT, while the sample on July 12th and July 14th revealed a 3% and 1% incidence of GBT, respectively. The action criteria for GBT with Rank 1 signs of GBT is 15% of the population was not exceeded this past week.

Smolt Monitoring:

Smolt monitoring was ongoing at all SMP sites this past week. Subyearling Chinook predominated in the collections at all dams over the past week. The numbers of spring migrant salmonids and lamprey have continued to decline over the past few weeks. The largest numbers of subyearling Chinook are now passing the Lower Columbia dams in the reach from McNary Dam to Bonneville Dam as both wild Hanford subyearlings and large hatchery releases pass through the system.

Subyearling Chinook smolts continued to predominate in the passage indices this week at Lower Granite Dam and numbers increased slightly compared to last week. Subyearling indices averaged

6,000 per day this week compared to 5,000 per day last week. Steelhead, the second most predominant species, had passage numbers continue to decline with indices averaging 200 per day this week compared to 500 last week; yearling Chinook average weekly indices dropped from 100 to 30; sockeye indices also dropped from 140 per day last week to 50 this week. Little Goose and Lower Monumental dams showed similar patterns in passage with subyearling Chinook predominating, followed by steelhead and yearling Chinook.

Sampling at Rock Island Dam is ongoing. Subyearling Chinook predominated in the samples over the past week. Subyearling Chinook collections increased again this with the index averaging 630 per day this week compared to 540 per day last week. Steelhead and sockeye indices averaged 17 per day this week. Collections of all spring migrants have declined rapidly over the past three weeks.

Sampling at McNary Dam is every other day during “spring-like conditions”. Every other day sampling began on April 13. Subyearling Chinook predominated in passage at the site this past week, with the average passage index for subs at 150,000 per day this week compared to 160,000 last week. Indices for all spring migrants continued to go down over the past week. Combined the coho, yearling Chinook, steelhead and sockeye indices all averaged fewer than 100 fish per day.

At John Day Dam passage indices declined for all spring migrant species except sockeye while subyearling Chinook indices remained relatively high. Subyearling Chinook predominated in the sample at this site as well, with the passage index for subyearlings averaging 68,000 per day this week compared to 70,000 per day last week. Lamprey collections decreased over the past week. The lamprey collection dropped from 800 per day last week to 500 per day this week.

At Bonneville Dam the COE began reinstalling screens at Powerhouse 2 on July 12. Due to debris and high flows the COE was unable to keep the screens clean so that they removed the screens until flows subsided. It was anticipated that there might be an increase in subyearling collections once the screens are installed. But the spike in the index came just before the screens were installed, when the index for the sample ending at 7 am on July 12, just prior to installing screens, rose to over 70,000. But subsequent days have seen it decline to less than 50,000 so it

is hard to determine at this point what impact the additions of screens is having. Given the biased collections the largest indices over the past week have been for subyearling Chinook which averaged 53,000 per day this week compared to 60,000 per day last week.

Hatchery Release:

Snake River Zone: The Snake River Zone encompasses the Snake River and its tributaries from its confluence with the Columbia River to Hells Canyon Dam. Approximately 50,000 sockeye pre-smolts were released into Redfish Lake on July 12th. These sockeye pre-smolts were 100% adipose clipped but are not expected to out-migrate until the spring of 2012. There are no other new releases scheduled for this zone over the next two weeks.

Mid-Columbia Zone: The Mid-Columbia Zone encompasses the area of the Columbia River and its tributaries from McNary Dam to Chief Joseph Dam. There were no scheduled releases to this zone this week. In addition, there are no new releases of juvenile salmonids scheduled for the next two weeks.

Lower Columbia Zone: The Lower Columbia Zone is defined as the Columbia River and its tributaries from Bonneville Dam to McNary Dam. There were no scheduled releases to this zone this week. Also, there are no new releases of juvenile salmonids scheduled for this zone over the next two weeks.

Adult Passage:

Daily passage numbers at Bonneville Dam ranged between 927 and 1,398 adult summer Chinook in the last week. The 2011 summer Chinook count of 94,981 is 1.06 times greater than the 2010 count and about 1.21 times greater than the 10 year average. The 2011 Bonneville Dam summer Chinook jack count of 44,841 is 3.18 times greater than the 2010 count and 3.83 times greater than the 10 year average count. At McNary Dam 57,583 adult summer Chinook have been counted. The 2011 McNary adult summer Chinook is about 99.5% of the 2010, while being 1.04 times greater than the 10 average counts. The 2011 McNary Dam summer Chinook jack count of 23,124 is about 3.54 times greater than the 2010 count of 6,526 and about 3.18 times greater than the 10 year average count of 7,266. The 2011 adult summer Chinook count at Lower Granite Dam in the Snake River of 32,126 is about 1.19 times greater than the 2010 count and 2.41 times greater than the 10 year average count. The 2011 Lower Granite summer Chinook jack count of 13,774 is about 3.02 times greater than the 2010 count and

3.69 times greater than the 10 year average count.

The Bonneville Dam 2011 steelhead count of 26,843 is about 27.9% of the 2010 count of 95,905 and about 55.3% of the 10 year average count of 48,528. At Rock Island Dam, as of July 11th, 136 adult steelhead had been counted and at Rock Reach Dam 597 had been counted. In the Snake River, this year's Lower Granite steelhead count of 12,731 is about 89.9% of the 2010 count of 14,157, while being 1.15 times greater than the 10 year average of 11,013. The 2011 Lower Granite wild steelhead count as of July 14th was 5,911. At Willamette Falls Dam, the 2011 count for steelhead was 24,193, as of July 7th. This year's steelhead count is about 82.3% of the 2010 count of 29,387 and about 91.3% of the 10 year average count of 26,490 at Willamette Falls Dam for the same date range.

Daily adult sockeye passage numbers at Bonneville Dam ranged between 2,514 and 5,262 last week. The 2011 adult sockeye count at Bonneville Dam of 175,990 is about 46.2% of the 2010 count of 381,022, while being 1.45 times greater than the 10 year average count of 121,637. The 2011 McNary Dam adult sockeye count of 92,567 is about 34.4% of the 2010 count, while being 1.05 times greater than the 10 year average count. Two of the major spawning sites for sockeye in the Upper Columbia River zone are Lake Wenatchee and Lake Osoyoos (Okanogan basin). In the Snake River at Ice Harbor Dam, the 2011 adult sockeye count of 705 is 67.1% of the 2010 count, while being 2.81 times greater than the 10 year average count. The Lower Granite Dam 2011 adult sockeye count of 522 is about 36.1% of the 2010 count, while being 1.63 times greater than the 10 year average count.

As of July 14th at Bonneville Dam, the adult Shad count was 929,607. This year's shad count is about 89.9% of the 2010 count of 1,034,246 and about 30.4% of the 10 year average count of 3,053,163.

Two-Week Summary of Passage Indices

* See sampling comments <http://www.fpc.org/currentDaily/smpcomments.htm>

Smolt indices, clipped & unclipped or combined, are presented in the following order: yearling chinook (chinook 1's), subyearling chinook (chinook 0's), steelhead, coho, sockeye, and lamprey juveniles. Two classes of fish counts are shown in these tables:

Two classes of fish counts are shown in these tables:

Collection counts (Coll), which account for sample rates but are not adjusted for flow;

Passage indices (INDEX), which are collection counts divided by the proportion of water passing through the sampled powerhouse.

Passage indices are not population estimates, but are used to adjust collection counts for daily fluctuations in the site's or project's operations.

The classes of counts presented in the report are defined below for each site. Most samples occur over a 24-hr period

that spans two calendar days. In this report, the date shown corresponds with the sample end date.

Combined lamprey juvenile collection counts are provided for all sites. Combined lamprey juveniles is a combination of pacific lamprey ammocoetes, brook lamprey ammocoetes, unknown lamprey ammocoetes, and pacific lamprey macrophthalmia.

† Caution should be used with interpreting lamprey juvenile collection counts at LGR because of the possibility that lamprey may escape the sample tank before being sampled

Definitions for Smolt Index Counts

WTB (Collection) = Salmon River Trap at Whitebird : Collection Counts

IMN (Collection) = Imnaha River Trap : Collection Counts

GRN (Collection) = Grande Ronde River Trap : Collection Counts

LEW (Collection) = Snake River Trap at Lewiston : Collection Counts

LGR (Index) = Lower Granite Dam Bypass Collection System : Passage Index Counts

Passage Index = $\text{Collection Counts} / \{ \text{Powerhouse Flow} / (\text{Powerhouse Flow} + \text{Spill}) \}$

LGS (Index) = Little Goose Bypass Collection System : Passage Index Counts

Passage Index = $\text{Collection Counts} / \{ \text{Powerhouse Flow} / (\text{Powerhouse Flow} + \text{Spill}) \}$

LMN (Index) = Lower Monumental Dam Bypass Collection System : Passage Index Counts

Passage Index = $\text{Collection Counts} / \{ \text{Powerhouse Flow} / (\text{Powerhouse Flow} + \text{Spill}) \}$

RIS (Index) = Rock Island Dam Second Powerhouse Bypass Trap : Passage Index Counts

Passage Index = $\text{Collection Counts} / \{ \text{Powerhouse 2 Flow} / (\text{Powerhouse 1 \& 2 Flow} + \text{Spill}) \}$

MCN (Index) = McNary Dam Bypass Collection System : Passage Index Counts

Passage Index = $\text{Collection Counts} / \{ \text{Powerhouse Flow} / (\text{Powerhouse Flow} + \text{Spill}) \}$

JDA (Index) = John Day Dam Bypass Collection System : Passage Index Counts

Passage Index = $\text{Collection Counts} / \{ \text{Powerhouse Flow} / (\text{Powerhouse Flow} + \text{Spill}) \}$

BO2 (Index) = Bonneville Dam Second Powerhouse Bypass Collection System : Passage Index Counts

Passage Index = $\text{Collection Counts} / \{ \text{Powerhouse 2 Flow} / (\text{Powerhouse 1 \& 2 Flow} + \text{Spill}) \}$

JDA and BO2 data collected for the FPC by Pacific States Marine Fisheries Commission.

RIS data collected for the FPC by Chelan Co. PUD/Washington Dept. of Fish and Wildlife.

LGR, LMN, and MCN data collected for the FPC by Washington Dept. of Fish and Wildlife.

LGS and GRN data collected for the FPC by Oregon Dept. of Fish and Wildlife.

IMN data collected for the FPC by the Nez Perce Tribe.

PRD does not post wild steelhead numbers.
 These numbers were collected from USACE, Grant PUD, Douglas PUD, Chelan PUD, ODFW and DART.
 Wild steelhead numbers are included in the total. Wild Steelhead are defined as unclipped fish.
 Historic counts (pre-1996) were obtained from CRITFC and compiled by the FPC.
 Historic counts 1997 to present were obtained from the Corps of Engineers.

Page last updated on: 07/15/11

BON counts from January 1, 2011 to March 14, 2011 (historical counts begin March 15):

Year	Chinook Adult	Chinook Jack	Steelhead	Wild Steelhead
2011	49	1	1,419	600
2010	39	0	2,318	657
