Weekly Report #12 - 06

April 20, 2012

1827 NE 44th Ave., Suite 240
Portland, OR 97213
phone: 503/230-4099
fax: 503/230-7559

Summary of Events:

Water Supply: Precipitation throughout the Columbia Basin has varied between 57% and 92% of average at individual sub-basins over the first portion of April. Precipitation above The Dalles has been 81% of average over April. Over the 2012 water year, precipitation has ranged between 81% and 114% of average.

Table 1. Summary of April precipitation and cumulative October through April 16, 2012 precipitation with respect to average (1971-2000), at select locations within the Columbia and Snake River Basins.

Location	Water Year 2012 April 1-16, 2012		Water Year 2012 October 1, 2011 to April 16, 2012	
	Observed (inches)	% Average	Observed (inches)	% Average
Columbia Above Coulee	0.69	78	16.92	112
Snake River Above Ice Harbor	0.57	73	11.20	101
Columbia Above The Dalles	0.71	81	16.28	107
Kootenai	0.77	83	17.37	112
Clark Fork	0.51	77	11.04	114
Flathead	0.68	80	14.15	109
Pend Oreille/ Spokane	0.99	82	23.33	109
Central Washington	0.24	71	5.06	81
Snake River Plain	0.32	57	6.64	100
Salmon/Boise/ Payette	0.56	65	13.69	100
Clearwater	1.14	80	21.93	109
SW Washington Cascades/ Cowlitz	2.23	78	54.92	98
Willamette Valley	2.37	92	50.42	105

Average snowpack in the Columbia River for basins above the Snake River confluence is 111% of average, for Snake River Basins the average snowpack is 77% of average, and for lower Columbia Basins between McNary and Bonneville Dam average snowpack is 110% of average.

The NWRFC has eliminated the distribution of their Multiple Linear Regression Water Supply Forecasts as their “Official” forecast and are now producing ESP (Ensemble Streamflow Prediction) forecasts at least once per week. The “Official” April ESP forecast was produced on April 5, 2012.

Table 2 displays the April 5th and April 17th ESP runoff volume forecasts for multiple reservoirs. The April 5th “Official” forecast at The Dalles between January and July is 114135 Kaf (106% of average).

Table 2. April 5, 2012 “Official” and April ESP Runoff Volume Forecasts for various reservoirs within the Columbia and Snake River Basins.

Location	April 5, 2012 ESP		April 17, 2012 ESP	
	% Average (1971 -2000)	Runoff Volume (Kaf)	% Average (1971 -2000)	Runoff Volume (Kaf)
The Dalles (Jan-July)	106	114135	104	112068
Grand Coulee (Jan- July)	110	69099	107	67114
Libby Res. Inflow, MT (Apr-Aug)	117	7312 6872*	110	6854 6872*
Hungry Horse Res. Inflow, MT (Jan-July)	103	2285	98	2174
Lower Granite Res. Inflow (Apr- July)	106	22825	101	21783
Brownlee Res. Inflow (Apr-July)	103	6512	95	5993
Dworshak Res. Inflow (Apr-July)	109	2874 2966*	108	2864 2966*

* Denotes COE Forecast

Grand Coulee Reservoir is at 1233.2 feet (4-19-12) and drafted 9.2 feet over the last week. Outflows at Grand Coulee have ranged between 144.2 and 177.4 Kcfs over the last week. The end of April FC Elevation at Grand Coulee is 1220.2 feet.

The Libby Reservoir is currently at elevation 2382.3 feet (4-19-12) and has drafted 6.9 feet last week. The end of April FC Elevation at Libby is 2377.3 feet. Outflows at Libby Dam have been between 18 and 25 Kcfs last week.

Hungry Horse is currently at an elevation of 3523.9 feet (4-19-12) and has drafted 1.8 feet last week. Outflows at Hungry Horse have ranged between 9.2 and 10.9 Kcfs last week. The end of April FC Elevation at Hungry Horse is 3521.7 feet.

Dworshak is currently at an elevation of 1511.0 feet (4-19-12) and has drafted 4.2 feet last week. The end of April System Flood Control Elevation is 1499.6 feet. Outflows from Dworshak have been 19.4 Kcfs over the past week.

The Brownlee Reservoir was at an elevation of 2023.4 feet on April 17th, 2012 drafting 4.8 feet last week. Over the last week, outflows at Brownlee have ranged between 32.1 and 42.3 Kcfs. The end of April FC Elevation at Brownlee is 2014.3 feet.

The Biological Opinion flow period began on April 3rd in the lower Snake River (Lower Granite). According to the April Final Water Supply Forecast, the flow objective this spring is 100 Kcfs at Lower Granite. Flows at Lower Granite Dam from April 3-19 have averaged 104.4 Kcfs.

Based on the April Final Water Supply Forecast, the Spring Biological Opinion Flow Objectives will be 260 Kcfs at McNary Dam (began April 10th) and 135 Kcfs at Priest Rapids Dam (began April 10th). Flows at McNary Dam have averaged 292.5 Kcfs between April 10-19. Flows at Priest Rapids Dam have averaged 179.8 Kcfs between April 10-19.

Spill:

Spill occurred at Dworshak Dam over the past week as the continued to draft to its end of April flood control elevation. Spill for fish passage began on April 3rd at the lower Snake River projects, and on April 10th at the lower Columbia River projects.

In general, flows have remained high over the past week. At several hydro projects in the FCRPS, there are turbine units out of service limiting the hydraulic capacities of the projects, and potentially causing additional spill.

At Lower Granite Dam spill has met the Court Ordered 20 Kcfs, and exceeded that level during some nighttime hours. At Little Goose Dam, spill has been provided to the 30% of instantaneous flow level as specified in the Court Order over the past week. The tailrace TDG has consistently been around 114% to 116.5%, below the 120% TDG waiver. At Lower Monumental Dam the COE implemented a downward adjustment to 26 Kcfs to address TDG at the tailrace and at Ice Harbor Dam forebay. This lower spill level is based on continuing to spill with a bulk spill pattern (according to the rolled-over Fishery Operations Plan), while the fishery agencies and tribes prefer a uniform pattern at the present flow levels. At Ice Harbor Dam the Court Order calls for 45 Kcfs spill during the day and gas cap spill at night, until the “test-like” spill amounts are implemented. Spill has met the 45 Kcfs/gas cap specifications.

Project	Day/Night Spill
Lower Granite	20 Kcfs/20 Kcfs
Little Goose	30%/30%
Lower Monumental	Gas Cap/Gas Cap
Ice Harbor	45 Kcfs/gas cap

Spill for fish passage at the Lower Columbia projects began on April 10th. Spill at McNary Dam was in excess of the Court Order as a result of spill in excess of hydraulic capacity due to unit outages. Spill at John Day Dam was 30% of instantaneous flow with some hours of higher spill during nighttime hours. This level will be changed to alternating 30% and 40% levels during the upcoming test period. At The Dalles Dam, spill has not met the 40% objective due to TDG at the Bonneville forebay exceeding the 115% criteria. At Bonneville Dam spill has consistently been below the 100 Kcfs in the Court Order due to the COE’s TDG management. The 100 Kcfs spill level was not provided during the passage of the Spring Creek NFH release last Friday.

Project	Day/Night Spill
McNary	40%/40%
John Day	Pre-test: 30%/30% Testing: 30%/30% vs. 40%/40%
The Dalles	40%/40%
Bonneville	100 Kcfs/100 Kcfs

Gas bubble trauma samples were taken this past week at Lower Granite, Little Goose, Lower Monumental, McNary and Bonneville dams. There were no fish observed with signs of GBT at the projects, with the exception of McNary Dam where two fish (1.9% of the sample) were observed with Rank 1 signs of GBT on April 16th.

Smolt Monitoring:

Smolt monitoring is ongoing at all seven SMP dams (BON, JDA, MCN, LGR, LGS, LMN, and RIS), and the four SMP traps.

The passage index for yearling Chinook at BON continued to increase this week. The daily average passage index at BON for yearling Chinook this week was about 10,400 per day compared to a daily average of nearly 1,100 last week. Subyearling Chinook numbers increased substantially again this week. This is due to the release of nearly 8.0 million subyearling fall Chinook tules into the Bonneville Pool. Of these 8.0 million subyearlings, nearly 1.0 million were released on Wednesday, April 11th from Spring Creek NFH and 7.0 million were released from Spring Creek and Little White NFH on Friday, April 13th. The fish from the April 11th release were first encountered at BON at 0040 on April 12th. Subsequent to their arrival, mortality rates of subyearling Chinook began to increase. The sample ending on April 13th had a daily mortality of 15.2% for subyearling Chinook. Due to these high mortalities, and the release of 7.0 million additional subyearlings on April 13th, the salmon managers submitted a System Operational Request (SOR) for a special operation at BON during the peak passage of the subyearling Chinook released on April 13th. In this request, the salmon managers requested that the turbines in the BON second powerhouse be operated at the mid-point of the 1% best efficiency range. With all turbine units operating at this level, this would be hydraulic capacity for the second powerhouse. Flows above this hydraulic capacity would be spilled, until the spill amount lead to TDG exceedences below BON. If this occurred, the first powerhouse at BON could then be operated at Open Geometry outside the 1% best efficiency range. This SOR was rejected by the Action Agencies. However, the COE proposed an alternative operation, which called for operating the second powerhouse at or below the mid-point of the 1% best efficiency range while operating powerhouse one at Open Geometry and not providing additional spill if needed to maintain powerhouse two operations.

The salmon managers did not object to this alternative proposal. This operation was implemented on the afternoon of April 13th through Tuesday, April 17th. Subyearling fall Chinook from the April 13th releases were first encountered in the sample at BON at about 0100 on April 14th. The average daily passage index for subyearling Chinook at BON this week was 217,661, with a peak passage of over 1.02 million subyearlings on April 14th. From April 14th to April 17th, the daily sample mortality for subyearling Chinook ranged from 0.5 to 3.7%. Since the alternative operation ended, the daily sample mortality for subyearling Chinook has increased to 5.0% on April 18th and 5.9% on April 19th. The passage indices of coho and steelhead also increased this week. Finally, there was an increase in the collection counts of juvenile lamprey this week. The daily average collection for pacific lamprey macrophthalmia this week 1,276 per day, compared to 767 last week.

Yearling Chinook continue to be the dominate species of salmonid, with an average daily passage index of 5,934 per day over the past week. Steelhead passage at JDA increased this week, with a daily passage index of nearly 2,404 steelhead juveniles per day. The collection counts of juvenile lamprey decreased at JDA this week, with a daily average collection of 594 pacific macrophthalmia per day and very few pacific ammocoetes. Yearling Chinook continue to be the dominate species of salmonid at MCN as well. The daily average passage index for yearling Chinook at MCN was 6,773 per day. Steelhead were the second most abundant species, with an estimated daily passage index of 3,751 per day. MCN has also collected subyearling Chinook (fry), coho, sockeye, and pacific lamprey macrophthalmia since their first sample on April 11th.

Compared to last week's samples, steelhead numbers at LGR increased substantially this week. The daily average passage index for steelhead at LGR this week is over 78,500 per day. Steelhead were the dominate species passing LGR this week. Yearling Chinook passage at LGR also increased this week, with an average daily passage index of 62,597 per day. The majority of the steelhead and yearling Chinook sampled at LGR this week were of hatchery origin. LGR continued to collect relatively few subyearling Chinook (fry), coho, and sockeye/kokanee over the past week. Finally, the collection counts of juvenile lamprey at LGR have averaged about 29 per day for pacific macrophthalmia. No pacific lamprey ammocoetes were

collected at LGR this week. Sampling at LGS and LMN is limited and for condition monitoring only. Yearling Chinook and steelhead continued to be the dominant salmonid species at these two projects this week.

Rock Island Dam continued to collect very few juveniles this week. However, yearling Chinook numbers have increased over the past couple of days. Prior to April 18th, the highest passage index for yearling Chinook was 18. The passage index for yearling Chinook on April 18th and 19th was 139 and 883, respectively.

The Grande Ronde Trap continues to collect mostly yearling Chinook. Compared to last week, the collection of yearling Chinook increased, with a daily average collection of nearly 1,170 fish per day. Of the yearling Chinook collected over the past week, the proportion that are of known hatchery origin has increased in recent samples. This is likely due to the releases of hatchery yearling Chinook from various locations in the Grande Ronde basin over the past week. Collections of steelhead have also increased over the past week. Of the steelhead collected over the past week, the proportion that are of known hatchery origin has been in the 0.81 to 0.97 range.

Yearling Chinook continue dominate the collection at the Salmon River Trap. The daily average collection for yearling Chinook has increased over the past week. The daily average collection for yearling Chinook this week was nearly 3,500 per day. Due to high collection counts from April 13th to April 16th, the Salmon River Trap was moved to a new location on April 16th. This new location is further away from the shore, which results in lower collection counts. The decrease in collection counts since this time is likely due to this move. Of the yearling Chinook being collected at this trap this week, approximately 29% were unmarked. Daily steelhead collections at this trap increased this week, with a daily average collection of 78 per day.

Collections of yearling Chinook at the Snake River Trap increased this week and yearling Chinook are still the dominate species of salmonids at this site. The daily average collection for yearling Chinook was 191 fish per day this week. Of the yearling Chinook collected at this trap this week, approximately 67% were unmarked. Although still relatively low, steelhead collections also increased this week. The daily average collection for steelhead this week was 42 fish per day, compared to a daily average collection

of 4 per day last week. To date, the peak steelhead collection count at the Snake River Trap was Thursday, April 19th, at 86 fish.

Over the past week of available data, yearling Chinook have been the dominant species of salmonid collected at the Imnaha Trap, with a daily average collection of 108 fish per day. Collections from the past week of available data indicate a continuing trend in decreasing yearling Chinook numbers since early April. The daily average collection for steelhead over the past week of available data is 58 fish per day. As with yearling Chinook, it appears that steelhead numbers have also decreased since early April.

Adult Fish Passage:

Adult counts at Bonneville Dam have been updated through April 19th. From March 15th through April 19th, daily adult spring Chinook counts at Bonneville Dam ranged from 78 to 365 adult salmon per day. As of April 19th, using the historical counting schedule, 1,430 spring Chinook have been counted at Bonneville Dam. In 2011, 1,754 adult spring Chinook were counted at Bonneville Dam for the same time period. The 2012 adult spring Chinook count at Bonneville Dam is 81.5% of the 2011 count and only 5.9% of the 10 year average of 24,123. At Willamette Falls Dam 265 adult spring Chinook has been counted so far this year. At The Dalles Dam, 342 adult spring Chinook have been counted and at McNary Dam 25 adult spring Chinook have been counted so far this season. The Dalles Dam 2012 adult spring Chinook count is 87.7% of the 2011 count and only 2.7% of the 10 year average count. The 2012 McNary Dam adult spring Chinook count is about 23.1% of the 2011 count.

The Bonneville Dam 2012 steelhead count of 2,184 is about 1.18 times greater than the 2011 count of 1,842 and 1.13 times greater than the 10 year average count of 1,934. The 2012 Bonneville wild adult steelhead count of 665 is about 85% of the 2011 count of 782, while being about 1.12 times greater than the 10 year average count of 593. At upriver sites, adult steelhead continue to move through the hydro system to reach their tributaries and spawning sites. The majority of these fish over-wintered in pools and will complete their trip to their spawning grounds in March through early May. Daily adult steelhead counts at Lower Granite Dam ranged from 93 to 153 adults per day last week. This year's Lower Granite steelhead count of 7,558 is about 73.2% of the 2011 count of 10,320 and 84.9% of the 10 year average of 8,896. The 2012 Lower

Granite wild adult steelhead count of 3,015 is about 68.6% of the 2011 count of 4,394, while being about 1.21 times greater than the 10 year average count of 2,483. At Willamette Falls Dam, the 2012 count for steelhead was 5,738, as of April 18th. This year's steelhead count is about 86.8% of the 2011 count of 6,613 and about 73.6% of the 10 year average count. At Bonneville Dam, daily counts of adult salmon and steelhead found on the separator and bypassed are being tracked this year for the period of March 1st to April 20th. Daily adult steelhead bypassed counts have ranged from 0 to 6. A total of 73 adult steelhead and 6 salmon have been bypassed so far this year.

Hatchery Release:

Snake River Zone: The Snake River Zone encompasses the Snake River and its tributaries from its confluence with the Columbia River to Hells Canyon Dam. Several volitional releases of yearling spring and fall Chinook that were scheduled to begin in previous weeks were scheduled to end this week. In addition, several new releases of yearling spring Chinook were scheduled to begin this week. In all, these releases were expected to total over 318,000 spring Chinook juveniles. Of these, approximately 62% were scheduled for release into the Yankee Fork of the Salmon River and 38% were scheduled for release into the Grande Ronde River. Finally, nearly 2.28million summer steelhead were scheduled for release into this zone this week. Of these, about 53% were scheduled for release into the Clearwater River and 41% were scheduled for release into the Salmon River. The remaining 6% were scheduled for direct release from Lyons Ferry Hatchery, which is located below Little Goose Dam.

Approximately 30,000 spring Chinook pre-smolts are scheduled for release into the Tucannon River in May. These pre-smolts are not likely to out-migrate until spring of 2013. The only other species of salmonid that has scheduled releases over the next two weeks is summer steelhead. In all, 881,500 summer steelhead are scheduled to be released to this zone over the next two weeks. These summer steelhead are scheduled to be released throughout this zone, including: the Salmon River (54%), the Pahsimeroi River (20%), the Grande Ronde River (20%), and the Imnaha River (6%).

Mid-Columbia Zone: The Mid-Columbia Zone encompasses the area of the Columbia River and its tributaries from McNary Dam to Chief Joseph Dam. Approximately 2.0 million yearling spring

Chinook were scheduled for release into this zone this week. These summer Chinook were scheduled for release to the Wenatchee (58%) and Methow (42%) rivers. Nearly all of the spring Chinook juveniles that were scheduled to be released to the Methow River this week are unclipped, but are tagged with coded-wire tags. In addition to the spring Chinook releases this week, nearly 175,000 summer Chinook were scheduled for release into the Entiat River this week. Approximately 1.16 million juveniles were scheduled for release into this zone this week. These coho juveniles were to be released into the Wenatchee (51%) and Yakima (49%) rivers. All of the coho that are scheduled for release into the Wenatchee are unclipped but are tagged with coded-wire-tags. Finally, several releases of summer steelhead juveniles were scheduled to begin this week. In all, these steelhead releases were expected to total about 511,500 juveniles to various locations throughout this river zone. The release locations for these steelhead releases include: the Methow River (63%), the Walla Walla River (20%), the Touchet River (10%), and the Okanogan River (7%).

Approximately 183,300 yearling spring Chinook are scheduled for release into the Methow River on or around April 25th. All of these spring Chinook are going to be unclipped but are tagged with coded-wire-tags. In addition, nearly 66,000 coho juveniles are scheduled for release into the Wenatchee River in early May. This is a volitional release that will likely run through early June. Finally, nearly 155,000 summer steelhead juveniles are scheduled for release for this zone over the next two weeks. Of these, 65% are scheduled for release into the Mid-Columbia River, 19% are scheduled for release into the Okanogan River, and 16% are scheduled for release into the Wenatchee River.

Lower Columbia Zone: The Lower Columbia Zone is defined as the Columbia River and its tributaries from Bonneville Dam to McNary Dam. Several releases of yearling spring Chinook were scheduled to begin this week. In all, these releases were expected to total nearly 2.2 million juveniles. The majority (99%) of these spring Chinook juveniles were scheduled for release from federal hatcheries on the Wind (53%) and Little White Salmon (46%) rivers. The remaining 1% of the spring Chinook juveniles scheduled for release this week were to be released to the Deschutes River. In addition, approximately 103,500 summer steelhead were scheduled for release into this zone this week. Of these, approximately 87% were scheduled for release into the Klickitat River while 13% were scheduled for

release into the Deschutes River.

Approximately 660,000 yearling spring Chinook are scheduled for release into this zone over the next two weeks. All of these spring Chinook are scheduled to be released into the Umatilla River. In addition, beginning in or around May 1st, the Yakama Tribe will release about 1.08 million coho from the Klickitat Hatchery into the Klickitat River. Finally, 200,000 steelhead juveniles are scheduled for release into this zone over the next two weeks. Of these, 150,000 are summer steelhead that are scheduled to be released into the Umatilla River. The remaining 50,000 steelhead juveniles that are scheduled for release over the next two weeks are winter steelhead that are scheduled for release into Hood River.

Two-Week Summary of Passage Indices

* See sampling comments <http://www.fpc.org/currentDaily/smpcomments.htm>

Smolt indices, clipped & unclipped or combined, are presented in the following order: yearling chinook (chinook 1's,) subyearling chinook (chinook 0's), steelhead, coho, sockeye, and lamprey juveniles. Two classes of fish counts are shown in these tables:
Two classes of fish counts are shown in these tables:

Collection counts (Coll), which account for sample rates but are not adjusted for flow;

Passage indices (INDEX), which are collection counts divided by the proportion of water passing through the sampled powerhouse.

Passage indices are not population estimates, but are used to adjust collection counts for daily fluctuations in the site's or project's operations.

The classes of counts presented in the report are defined below for each site. Most samples occur over a 24-hr period that spans two calendar days. In this report, the date shown corresponds with the sample end date.

Combined lamprey juvenile collection counts are provided for all sites. Combined lamprey juveniles is a combination of pacific lamprey ammocoetes, brook lamprey ammocoetes, unknown lamprey ammocoetes, pacific lamprey macrophthalmia, and unidentified lamprey species.

† Caution should be used with interpreting lamprey juvenile collection counts at LGR because of the possibility that lamprey may escape the sample tank before being sampled

Definitions for Smolt Index Counts

WTB (Collection) = Salmon River Trap at Whitebird : Collection Counts

IMN (Collection) = Imnaha River Trap : Collection Counts

GRN (Collection) = Grande Ronde River Trap : Collection Counts

LEW (Collection) = Snake River Trap at Lewiston : Collection Counts

LGR (Index) = Lower Granite Dam Bypass Collection System : Passage Index Counts

Passage Index = $\text{Collection Counts} / \{ \text{Powerhouse Flow} / (\text{Powerhouse Flow} + \text{Spill}) \}$

LGS (Index) = Little Goose Bypass Collection System : Passage Index Counts

Passage Index = $\text{Collection Counts} / \{ \text{Powerhouse Flow} / (\text{Powerhouse Flow} + \text{Spill}) \}$

LMN (Index) = Lower Monumental Dam Bypass Collection System : Passage Index Counts

Passage Index = $\text{Collection Counts} / \{ \text{Powerhouse Flow} / (\text{Powerhouse Flow} + \text{Spill}) \}$

RIS (Index) = Rock Island Dam Second Powerhouse Bypass Trap : Passage Index Counts

Passage Index = $\text{Collection Counts} / \{ \text{Powerhouse 2 Flow} / (\text{Powerhouse 1 \& 2 Flow} + \text{Spill}) \}$

MCN (Index) = McNary Dam Bypass Collection System : Passage Index Counts

Passage Index = $\text{Collection Counts} / \{ \text{Powerhouse Flow} / (\text{Powerhouse Flow} + \text{Spill}) \}$

JDA (Index) = John Day Dam Bypass Collection System : Passage Index Counts

Passage Index = $\text{Collection Counts} / \{ \text{Powerhouse Flow} / (\text{Powerhouse Flow} + \text{Spill}) \}$

BO2 (Index) = Bonneville Dam Second Powerhouse Bypass Collection System : Passage Index Counts

Passage Index = $\text{Collection Counts} / \{ \text{Powerhouse 2 Flow} / (\text{Powerhouse 1 \& 2 Flow} + \text{Spill}) \}$

JDA and BO2 data collected for the FPC by Pacific States Marine Fisheries Commission.

RIS data collected for the FPC by Chelan Co. PUD/Washington Dept. of Fish and Wildlife.

LGR, LMN, and MCN data collected for the FPC by Washington Dept. of Fish and Wildlife.

LGS and GRN data collected for the FPC by Oregon Dept. of Fish and Wildlife.

IMN data collected for the FPC by the Nez Perce Tribe.

PRD does not post wild steelhead numbers.
 These numbers were collected from USACE, Grant PUD, Douglas PUD, Chelan PUD, ODFW and DART.
 Wild steelhead numbers are included in the total. Wild Steelhead are defined as unclipped fish.
 Historic counts (pre-1996) were obtained from CRITFC and compiled by the FPC.
 Historic counts 1997 to present were obtained from the Corps of Engineers.

Page last updated on: 04/20/12

BON counts from January 1, 2012 to March 13, 2012 (historical counts begin March 15):

Year	Chinook Adult	Chinook Jack	Steelhead	Wild Steelhead
2012	12	1	1,471	497
2011	47	0	1,370	580
