Weekly Report #13 - 16

July 3, 2013

1827 NE 44th Ave., Suite 240
 Portland, OR 97213
 phone: 503/230-4099
 fax: 503/230-7559

Due to the Fourth of July holiday, we are publishing the Weekly Report early this week. The next edition will be produced on Friday, July 12, 2013.

Summary of Events:

Water Supply: Precipitation throughout the Columbia Basin has varied over June, ranging between 41% and 153% of average at individual sub-basins. Precipitation above The Dalles has been 98% of average over June. Over the 2013 water year, precipitation has ranged between 69% and 110% of average.

Table 1. Summary of June precipitation and cumulative October through June precipitation with respect to average (1971–2000), at select locations within the Columbia and Snake River Basins.

Location	Water Year 2013 June 1–30, 2013		Water Year 2013 October 1, 2012 to June 30, 2013	
	Observed (inches)	% Average	Observed (inches)	% Average
	Columbia above Coulee	4.00	124	32.2
Sneke River above Ice Harbor	1.01	61	14.6	74
Columbia above The Dalles	2.05	98	20.7	86
Kootenai	5.55	153	35.8	110
Clark Fork	2.08	85	18.3	78
Flathead	3.13	100	31.2	101
Pend Oreille Basin	2.85	102	25.5	90
Sneke Basin above Hells Canyon	0.53	41	11.5	70
Salmon River Basin	1.54	62	17.4	69
Clearwater	2.58	87	31.6	86
Willamette River above Portland	2.02	82	55.1	91

Table 2 displays the April 7th and July 1st ESP runoff volume forecasts for multiple reservoirs. The July 1st forecast at The Dalles between January and July is 98,685 Kaf (97% of average).

Table 2. April and July ESP Runoff Volume Forecasts for various reservoirs within the Columbia and Snake River Basins.

Location	April 7, 2013 ESP		July 1, 2013 ESP	
	% Average (1971-2000)	Runoff Volume (Kaf)	% Average (1981-2010)	Runoff Volume (Kaf)
The Dalles (Jan–July)	93	94287	97	98685
Grand Coulee (Jan–July)	101	60415	108	64419
Libby Res. Inflow, MT (Apr–Aug)	102	6001 *6189	125	7358 **6464
Hungry Horse Res. Inflow, MT (Jan–July)	99	2084	111	2321
Lower Granite Res. Inflow (Apr–July)	83	16485	72	14300
Brownlee Res. Inflow (Apr–July)	62	3376	48	2624
Dworshak Res. Inflow (Apr–July)	96	2319 *2036	89	2141 **2158

* Denotes COE April Forecast
 ** Denotes COE June Forecast

Grand Coulee Reservoir is at 1286.5 feet (7-2-13) and drafted 1.6 feet over the last week. Outflows at Grand Coulee have ranged between 182.5 and 200.9 Kcfs over the last week.

The Libby Reservoir is currently at elevation 2457.1 feet (7-2-13) and has refilled 3.4 feet last week. Outflows at Libby Dam have been 28.3–30.3 Kcfs over the last week; inflows to Libby have ranged from 40.4 Kcfs to 49.8 Kcfs over the same period.

Hungry Horse is currently at an elevation of 3558.9 feet (7-2-13) and has refilled 1.1 feet last week. Outflows at Hungry Horse Dam have ranged from 4.1 Kcfs to 5.0 Kcfs over the last week.

Dworshak is currently at an elevation of 1597.8 feet (7-2-13) and has drafted 2.2 feet last week. Outflows from Dworshak have increased from 5.3 Kcfs to 13.0 Kcfs over the last week for temperature and flow augmentation in the lower Snake River.

The Brownlee Reservoir was at an elevation of 2074.6 feet on July 2nd, 2013, drafting 1.7 feet over the last week. Over the last week, inflows at Brownlee have ranged between 9.1 and 11.0 Kcfs.

The Spring Biological Opinion flow period began on April 3rd and ended on June 20th in the lower Snake River (Lower Granite). The flow objective this spring was 85 Kcfs at Lower Granite. Flows at Lower Granite Dam have averaged 67.9 Kcfs from April 3rd through June 20th. The flow objective at Lower Granite over the summer period (June 21st to August 31st) is 50 Kcfs; over the summer period flows at Lower Granite have averaged 46.6 Kcfs and 47.6 Kcfs over the last week.

The Spring Biological Opinion Flow Objectives were 226 Kcfs at McNary Dam (began April 10th) and 135 Kcfs at Priest Rapids Dam (began April 10th). Flows at McNary Dam have averaged 261.9 Kcfs between April 10th and June 30th. Flows at Priest Rapids Dam have averaged 187.4 Kcfs between April 10th and June 30th.

The flow objective at McNary over the summer period (July 1st to August 31st) is 200 Kcfs; over the first two days of summer period flows at McNary have averaged 283.7 Kcfs.

Spill: Spring spill for fish passage ended June 20th at the lower Snake River projects. Summer Spill began on June 20th and will extend through August 31st.

Project	Spill Level Day/Night
Lower Granite	18 Kcfs/18 Kcfs
Little Goose	30%/30%
Lower Monumental	17 Kcfs/17 Kcfs
Ice Harbor	30%/30% vs. 45 Kcfs/Gas Cap

Flow in the Snake River increased slightly over the past week as discharge from Dworshak Reservoir was increased for flow augmentation and temperature

control. All the lower Snake River dams met the court-ordered summer spill levels described in the table.

Spring spill for fish passage at the Lower Columbia projects began on April 10th and ended on June 30th, except at McNary Dam where summer spill began on June 20th, and Bonneville Dam where summer spill began on June 16th.

Project	Spring Spill Level Day/Night
McNary	40%/40%
John Day	Testing: 30%/30% vs. 40%/40%
The Dalles	40%/40%
Bonneville	100 Kcfs/100 Kcfs
Summer Spill Level Day/Night	
McNary	50%/50%
John Day	July 1–20: 30%/30% vs. 40%/40% July 20–August 3: 30%/30%
The Dalles	40%/40%
Bonneville	June 16–July 20: 85 Kcfs/121 Kcfs and 95 Kcfs/95 Kcfs July 21–August 31: 75 Kcfs/Gas Cap

Flow in the lower Columbia River has remained relatively steady since last week. At McNary Dam spill met or exceeded the court-ordered spill of 50% of instantaneous flow. At John Day Dam the COE implemented the test conditions of 30% versus 40%. At The Dalles Dam spill met the court-ordered spill of 40% of instantaneous flow. At Bonneville Dam spill alternated every two days between 95 Kcfs day and night and 85 Kcfs during the day and 121 Kcfs during nighttime hours.

While, in general, summer spill levels are less due to decreased flows and lower requirements, the TDG estimates often exceeded 115% at the forebay monitors. This reflects the recent hot weather, and the relation between TDG and increasing water temperatures. Based on historic data collected since 1995, through the gas bubble trauma (GBT) monitoring program, we would not expect to see fish exhibit signs of GBT at the present TDG levels. Consistent with historic data, one fish was detected with signs of GBT at Little Goose Dam on 7/1, one fish at McNary on 7/3, and one fish at Bonneville Dam on 6/29.

Smolt Monitoring: Smolt monitoring is ongoing at all seven SMP dams (BON, JDA, MCN, RIS, LMN, LGS, and LGR). The Imnaha River Trap is the only trap that continues to operate for the 2013 season.

Passage of all spring migrant salmonid species remained low during the week of June 26 to July 2 at BON, similar when compared to the previous seven days. This week's daily average passage indices for yearling Chinook, coho, sockeye, and steelhead at BON were about 300, 200, 60, and 400 per day, respectively. This week's daily average passage index for subyearling Chinook was about 53,000, which was a large increase over last week's daily average passage index of about 15,000 per day. Finally, only pacific lamprey macrophthalmia were collected at BON this week. Pacific macrophthalmia were collected six of the seven days of sampling, with a daily average collection for the week of 23 per day.

Subyearling Chinook dominated the bypass sample at JDA this week. This week's daily average passage index for subyearling Chinook was about 91,000 per day, which is an increase over last week's daily average passage index of about 32,000 per day. Passage of yearling Chinook decreased this week, as did indices for coho. This week's daily average passage index for yearling Chinook at JDA was about 460 per day. Last week's daily average passage index for yearling Chinook was just over 500 per day. This week's daily average passage indices for steelhead, sockeye, and coho at JDA were about 300, 200, and 40 per day, respectively. Last week's daily average passage indices were about 200 for steelhead, 100 for sockeye, and 70 for coho. Finally, only pacific lamprey macrophthalmia were sampled at JDA this week. Passage of pacific lamprey macrophthalmia decreased this week, when compared to last week. The daily average collection for pacific lamprey macrophthalmia this week was about 300 per day. Last week's daily average collection was about 1,100 per day.

Sampling at MCN for the 2013 season is every-other-day. Passage of nearly all salmonid species decreased this week, when compared to last week. However, subyearling Chinook passage increased. This week's daily average passage index for subyearling Chinook at MCN was over 189,000 per day. Last week's daily average passage index for subyearling

Chinook was about 95,000 per day. Pacific lamprey macrophthalmia continue to be the only species and life-stage of lamprey collected at MCN this season. This week's daily average collection for pacific lamprey macrophthalmia was about 400, which was higher than last week's daily average collection of about 300 per day. Two samples in the last two weeks have been shortened due to technical issues with the bypass. During the sample that ended on June 26th the bypass channel was shutdown for long periods due to a bypass channel overflow, thus biasing the 24-hour sample. Also, the sample that ended on June 20th was not a full sample. Sampling was halted twice during the normal 24-hour sample. At midnight the bypass was switched to primary bypass due to the lack of a separator technician for that shift. Then at 0800 an "extreme" water surge in the bypass channel flooded the separator and the bypass was again returned to primary bypass until the source of the surge was identified. According to the COE, "...Investigation revealed that the surge had resulted from a severe water fluctuation in the juvenile collection channel in the powerhouse. The surge occurred when an electrician was working on the switching mechanisms for the two side dewatering valves in the collection channel, which control the water level in the juvenile channel." So the sample for June 20th represents a biased sample due a shortened time period of sampling (approximately 16.75 hours).

Subyearling Chinook continued to dominate the bypass samples at LGR this week. This week's daily average passage index for subyearling Chinook was about 5,400 per day, which was lower than last week's daily average passage index of about 7,700 per day. Passage of all other juvenile salmonids decreased, or was very low this past week. This week's daily average passage indices for yearling Chinook and steelhead at LGR were about 10 and 200 per day, respectively. Last week's daily average passage indices were about 20 for yearling Chinook and 200 for steelhead. Passage of coho and sockeye was very low this week at LGR also. This week's daily average passage indices for coho and sockeye at LGR were 2 per day, for both species. Pacific ammocoetes were the only lamprey juveniles collected at LGR this week. An estimated 10 were collected on July 2nd. Finally, due to the possible resampling of PIT-tagged research fish that are released into the gatewells, daily estimates of subyearling Chinook collection and passage indices may have been

inflated. The FPC is aware of this possible bias and is investigating ways to correct these inflated estimates after the research has ended. However, the magnitude of this bias is relatively low and is unlikely to skew estimates of timing for this species.

Passage of subyearling Chinook at LGS decreased slightly this week. This week's daily average passage index for subyearling Chinook at LGS was about 8,600 per day. Last week's daily average passage index was about 9,200 per day. Yearling Chinook, coho, and steelhead passage at LGS continued to decrease this week, when compared to last week. The largest decrease among these species was for steelhead. The daily average passage index for steelhead was 400 per day. Last week's daily average passage index for steelhead was about 570 per day. Finally, pacific lamprey macrophthalmia were collected at LGS this week.

Similar to LGS, passage of spring migrants continued to decrease at LMN this week. As with LGR and LGS, subyearling Chinook continued to predominate passage at LMN this week. This week's daily average passage index for subyearling Chinook at LMN was about 4,700 per day. Last week's daily average passage index was only about 4,700 per day. Only pacific lamprey macrophthalmia were collected at LMN this week. This week's daily average collection for pacific lamprey macrophthalmia was 140 per day.

This week's collections at RIS were also dominated by subyearling Chinook. And, when compared to last week, subyearling Chinook passage increased this week. This week's daily average passage index for subyearling Chinook at RIS was about 340 per day. Last week's daily average passage index for subyearling Chinook was about 50 per day. Passage of yearling Chinook, coho, sockeye, and steelhead all increased slightly this week, when compared to last week. This week's daily average passage indices for yearling Chinook, coho, sockeye, and steelhead at RIS were about 6, 18, 16, and 13 per day, respectively. Last week's daily average passage indices were about 4 for yearling Chinook, 16 for coho, 5 for sockeye, and 7 for steelhead. Finally, a few each of both pacific lamprey macrophthalmia and ammocoetes were collected this week at Rock Island.

As with previous weeks, the Imnaha River Trap continues to collect only steelhead and Chinook at this time. However, as of this writing no additional sample data was available since last week's report.

Hatchery Release

Snake River Zone: The Snake River Zone encompasses the Snake River and its tributaries from its confluence with the Columbia River to Hells Canyon Dam. A release of approximately 400,000 parr was scheduled to begin on June 25th. These will outmigrate in 2014 and are all unmarked, and will therefore be undistinguishable from wild spring Chinook. On July 1st, a release of approximately 300,000 parr was scheduled to begin release into the Middle Fork of the Clearwater River. These will also outmigrate in 2014 and are all unmarked. There are no new releases scheduled for the next two weeks.

Mid-Columbia Zone: The Mid-Columbia Zone encompasses the area of the Columbia River and its tributaries from McNary Dam to Chief Joseph Dam. There were no new releases scheduled for the past week. There are also no new releases scheduled to begin in the next two weeks.

Lower Columbia Zone: The Lower Columbia Zone is defined as the Columbia River and its tributaries from Bonneville Dam to McNary Dam. On July 1st, there was a scheduled release of approximately 2.5 million fall Chinook subyearlings to the Little White Salmon River. All of these smolts were marked.

On July 15th, approximately 2 million fall Chinook are scheduled for release into the Little White Salmon River. All of these smolts will be marked.

Adult Fish Passage

Daily adult summer Chinook passage numbers at Bonneville Dam ranged between 1,458 and 2,337 in the last week. The 2013 summer Chinook count of 65,483 is about 1.11 times greater than the 2012 count of 58,641 and 1.03 times greater than the 10-year average count of 63,520. The 2013 Bonneville Dam summer Chinook jack count of 19,712 is 2.8 times greater than the 2012 count of 7,049 and 1.6 times greater than the 10-year average count of 12,207. At McNary Dam 46,180 adult summer Chinook have been counted. The 2013 adult summer Chinook count at

McNary Dam is about 1.3 times greater than the 2012 count and 1.2 times greater than the 10-year average. The 2013 McNary Dam summer Chinook jack count of 9,493 is about 4.2 times greater than the 2012 count and 1.5 times greater than the 10-year average count. The 2013 adult summer Chinook count at Lower Granite Dam in the Snake River of 4,436 is about 55.6% of the 2012 count and 41.5% of the 10-year average count. The 2013 Lower Granite summer Chinook jack count of 3,885 is about 4.6 times greater than the 2012 count and 1.3 times greater than the 10-year average count.

The 2013 Bonneville Dam adult steelhead count of 8,065 is about 52.9% of the 2012 count of 15,229 and 42% of the 10-year average count of 19,182. The 2013 Bonneville Dam adult wild steelhead count of 2,433 is about 48.8% of the 2012 count of 4,986 and 38.5% of the 10-year average count of 6,311. In the Snake River, this year's Lower Granite steelhead count of 7,567 is about 83.4% of the 2012 count of 9,071 and 75.7% of the 10-year average count of 9,992. The 2013 Lower Granite Dam adult wild steelhead count of 3,262 is about 81.8% of the 2012 count of 3,985, while having 10 fewer fish than the 10-year average count of 3,272. At Willamette Falls, the 2013 count for steelhead was 15,652 as of June 30th. This year's steelhead count is about 56.2% of the 2012 count of 27,843 and about 72% of the 10-year average count of 21,729.

Daily adult sockeye passage numbers at Bonneville Dam ranged between 4,708 and 9,001 last week. The 2013 adult sockeye count at Bonneville Dam of 126,900 is about 30.4% of the 2012 count of 417,687 and about 88.4% of the 10-year average count of 143,583. The 2013 McNary Dam adult sockeye count of 71,240 is about 32.2% of the 2012 count of 221,041 and 90.6% of the 10-year average count of 78,609. The Lower Granite Dam 2013 adult sockeye count of 74 is about 3 times greater than the 2012 count of 25 and 1.6 times greater than the 10-year average count of 45. As of July 2nd at Bonneville Dam, the adult shad count was 3,694,143. This year's shad count is about 1.6 times greater than the 2012 count of 2,373,267 and 1.3 times greater than the 10-year average count of 2,765,821.

Two-Week Summary of Passage Indices

* See sampling comments <http://www.fpc.org/currentDaily/smpcomments.htm>

Smolt indices, clipped & unclipped or combined, are presented in the following order: yearling chinook (chinook 1's,) subyearling chinook (chinook 0's), steelhead, coho, sockeye, and lamprey juveniles. Two classes of fish counts are shown in these tables:

Two classes of fish counts are shown in these tables:

Collection counts (Coll), which account for sample rates but are not adjusted for flow;

Passage indices (INDEX), which are collection counts divided by the proportion of water passing through the sampled powerhouse.

Passage indices are not population estimates, but are used to adjust collection counts for daily fluctuations in the site's or project's operations.

The classes of counts presented in the report are defined below for each site. Most samples occur over a 24-hr period

that spans two calendar days. In this report, the date shown corresponds with the sample end date.

Combined lamprey juvenile collection counts are provided for all sites. Combined lamprey juveniles is a combination of pacific lamprey ammocoetes, brook lamprey ammocoetes, unknown lamprey ammocoetes, pacific lamprey macrophthalmia, and unidentified lamprey species.

†† Passage index for yearling Chinook, steelhead, and subyearling Chinook at LGR may be inflated in 2013 due to possible resampling of PIT-tagged research fish

† Caution should be used with interpreting lamprey juvenile collection counts at LGR because of the possibility that lamprey may escape the sample tank before being sampled

Definitions for Smolt Index Counts

WTB (Collection) = Salmon River Trap at Whitebird : Collection Counts

IMN (Collection) = Imnaha River Trap : Collection Counts

GRN (Collection) = Grande Ronde River Trap : Collection Counts

LEW (Collection) = Snake River Trap at Lewiston : Collection Counts

LGR (Index) = Lower Granite Dam Bypass Collection System : Passage Index Counts

Passage Index = Collection Counts / {Powerhouse Flow / (Powerhouse Flow + Spill)}

LGS (Index) = Little Goose Bypass Collection System : Passage Index Counts

Passage Index = Collection Counts / {Powerhouse Flow / (Powerhouse Flow + Spill)}

LMN (Index) = Lower Monumental Dam Bypass Collection System : Passage Index Counts

Passage Index = Collection Counts / {Powerhouse Flow / (Powerhouse Flow + Spill)}

RIS (Index) = Rock Island Dam Second Powerhouse Bypass Trap : Passage Index Counts

Passage Index = Collection Counts / {Powerhouse 2 Flow / (Powerhouse 1 & 2 Flow + Spill)}

MCN (Index) = McNary Dam Bypass Collection System : Passage Index Counts

Passage Index = Collection Counts / {Powerhouse Flow / (Powerhouse Flow + Spill)}

JDA (Index) = John Day Dam Bypass Collection System : Passage Index Counts

Passage Index = Collection Counts / {Powerhouse Flow / (Powerhouse Flow + Spill)}

BO2 (Index) = Bonneville Dam Second Powerhouse Bypass Collection System : Passage Index Counts

Passage Index = Collection Counts / {Powerhouse 2 Flow / (Powerhouse 1 & 2 Flow + Spill)}

JDA and BO2 data collected for the FPC by Pacific States Marine Fisheries Commission.

RIS data collected for the FPC by Chelan Co. PUD.

LGR, LMN, and MCN data collected for the FPC by Washington Dept. of Fish and Wildlife.

LGS and GRN data collected for the FPC by Oregon Dept. of Fish and Wildlife.

IMN data collected for the FPC by the Nez Perce Tribe.

Fall (post SMP season) trapping at the Imnaha River Fish Trap (IMN) is funded by the Lower Snake River Compensation Program (LSRCP)

WTB and LEW data collected for the FPC by Idaho Dept. of Fish and Game.

PRD does not post wild steelhead numbers.

These numbers were collected from USACE, Grant PUD, Douglas PUD, Chelan PUD, ODFW and DART.

Wild steelhead numbers are included in the total. Wild Steelhead are defined as unclipped fish.

Historic counts (pre-1996) were obtained from CRITFC and compiled by the FPC.

Historic counts 1997 to present were obtained from the Corps of Engineers.
