## Weekly Report #14 - 18

July 18, 2014

847 NE 19th Ave., Suite 250  
Portland, OR 97232  
phone: (503) 833-3900  
fax: (503) 232-1259

### Summary of Events

#### Water Supply

Precipitation throughout the Columbia Basin has varied between 6% and 71% of average at individual sub-basins over the first sixteen days of July. Precipitation above The Dalles has been 22% of average over the first half of July. Over the 2014 water year, precipitation has ranged between 74% and 99% of average.

**Table 1.** Summary of July precipitation and cumulative October through July 16, 2014, precipitation with respect to average (1971–2000), at select locations within the Columbia and Snake River Basins.

Location	Water Year 2014		Water Year 2014	
	July 1-16, 2014		October 1, 2013 to	
	Observed (inches)	% Average	Observed (inches)	% Average
Columbia above Coulee	0.29	22	30.4	92
Snake River above Ice Harbor	0.13	26	15.8	78
Columbia above The Dalles	0.16	22	20.3	82
Kootenai	0.28	19	32.2	95
Clark Fork	0.13	16	19.7	81
Flathead	0.51	44	31.8	99
Pend Oreille River Basin above Waneta Dam	0.25	26	26.1	89
Salmon River Basin	0.12	15	19.2	74
Upper Snake Tributaries	0.55	71	21.2	88
Clearwater	0.10	11	33.6	90
Willamette River above Portland	0.03	6	51.1	83

Table 2 displays the July 17<sup>th</sup> ESP runoff volume forecasts for multiple reservoirs. The July 17<sup>th</sup> ESP forecast at The Dalles between January and July is 108,060 Kaf (107% of average).

**Table 2.** July ESP Runoff Volume Forecasts for various reservoirs within the Columbia and Snake River Basins.

Location	July 17, 2014, 5-day QPF ESP	
	% Average (1981–2010)	Runoff Volume (Kaf)
The Dalles (Jan–July)	107	108060
Grand Coulee (Jan–July)	109	65024
Libby Res. Inflow, MT (Apr–Aug)	116	6849
Hungry Horse Res. Inflow, MT (Jan–July)	133	2784
Lower Granite Res. Inflow (Apr–July)	99	19675
Brownlee Res. Inflow (Apr–July)	63	3439
Dworshak Res. Inflow (Apr–July)	123	2970

Grand Coulee Reservoir is at 1289.2 feet (7-17-14) and has refilled 0.5 feet over the last week (0.8 feet from full). Outflows at Grand Coulee have ranged between 130.5 and 152.0 Kcfs over the last week. The end of August draft limit at Grand Coulee is 1280 feet this year.

The Libby Reservoir is currently at elevation 2452.4 feet (7-17-14) and has refilled 1.0 foot over the previous week (6.6 feet from full). Daily average outflows at Libby Dam have been 15 Kcfs over the last week.

Hungry Horse is currently at an elevation of 3559.5 feet (7-17-14) and has held steady over the previous week (0.5 feet from full). Outflows at Hungry Horse have ranged between from 4.4 Kcfs to 5.7 Kcfs over the

last week.

Dworshak is currently at an elevation of 1589.2 feet (7-17-14) and has drafted 6.2 feet over the previous week. Outflows over the past week ranged from 11.8 Kcfs 13.7 Kcfs. Currently, Dworshak is releasing approximately 13.5 Kcfs for lower Snake River water temperature control and flow augmentation.

The Brownlee Reservoir was at an elevation of 2069.9 feet on July 17, 2014 and has drafted 3.0 feet last week. Inflows to Brownlee Dam have ranged between 9.4 and 12.2 Kcfs last week.

The Summer Biological Opinion flow period began on June 21<sup>st</sup> in the lower Snake River (Lower Granite). According to the June Final Water Supply Forecast (June 6, 2014), the flow objective this summer is 52 Kcfs at Lower Granite. Flows at Lower Granite Dam have averaged 46.2 Kcfs over the past week and 60.0 since the beginning of the summer flow period. The flow objective at McNary over the summer period (July 1<sup>st</sup> to August 31<sup>st</sup>) is 200 Kcfs. Flows at McNary Dam have averaged 217.0 Kcfs over the past week and 240.1 Kcfs since the beginning of the summer flow period.

**Spill**

The Snake River projects transitioned to the summer spill program on June 21<sup>st</sup>. At the lower Columbia projects summer spill was initiated on June 16<sup>th</sup>. Summer spill operations throughout the FCRPS will continue until August 31<sup>st</sup>.

All of the Snake River projects met the summer spill levels specified in the Fish Operations Plan (FOP). Spill equal to 18 Kcfs occurred at Lower Granite Dam. Spill at Little Goose Dam averaged the 30% of total flow volume specified in the FOP. At Lower Monumental Dam spill was a 17 Kcfs daily average. The summertime “test-like” conditions, where spill alternates between 30% instantaneous and 45 Kcfs/Gas Cap, ended on July 13<sup>th</sup>. Spill will continue as 45 Kcfs/ Gas cap until the end of the season.

Project	Spill Level Day/Night
Lower Granite	18 Kcfs/18 Kcfs
Little Goose	30%/30%
Lower Monumental	17 Kcfs/17 Kcfs
Ice Harbor	July 13: end of 30%/30% vs. 45 Kcfs/Gas Cap July 14 to Aug 31: 45 Kcfs/Gas Cap

At the Middle Columbia River projects, McNary Dam spilled 50% of daily average flow. At John Day Dam the testing of the 30% and 40% spill levels occurred over the past week. Spill at The Dalles Dam averaged 40% of total daily flow. Bonneville Dam spilled an alternating 85 Kcfs/121 Kcfs and 95 Kcfs/95 Kcfs.

Project	Spill Level Day/Night
McNary	50%/50%
John Day	<b>Testing:</b> 30%/30% vs. 40%/40% until July 20 <sup>th</sup>
The Dalles	40%/40%
Bonneville	85 Kcfs/121 Kcfs and 95 Kcfs/95 Kcfs

New in 2014 is a change in the way the U.S. Army Corps of Engineers will assess whether a project is in compliance with the total dissolved gas variances in place. The States of Oregon and Washington use different methodologies to estimate the 12-hour average TDG. For Oregon, the 12-hour average is based on the 12 highest hourly TDG measurements in a single calendar day (not necessarily consecutive). For Washington, the 12-hour average is based on 12-hour rolling averages. The highest of the rolling averages is what is reported as the 12-hour average for a given day. In 2014, the location of a TDG monitor and/or type of monitor will dictate which of these methodologies is used for compliance monitoring. The Washington methodology will apply to all the lower Snake River projects, as well as the lower Columbia River forebay monitors (since Oregon does not have a forebay TDG requirement). On any given day the compliance of the tailrace monitors at the lower Columbia River projects will be determined using either the Washington or Oregon methodology, whichever is the most restrictive, and spill may be decreased if needed.

Monitoring for signs of gas bubble trauma (GBT) occurred at Little Goose, Lower Monumental, McNary, Bonneville, and Rock Island dams over the past week. One fish was observed with minor (Rank 1) signs of GBT at Rock Island Dam on 7/15. The action criteria for GBT is 15% of total fish with any signs of GBT in the fins, or 5% with severe signs (Rank 3 or greater).

**Smolt Monitoring:** Smolt monitoring is ongoing at all seven SMP dams (BON, JDA, MCN, RIS, LMN, LGS, LGR). Sampling for the 2014 out-migration season was terminated at the Imnaha River Trap (IMN) after the July 15<sup>th</sup> sample.

Passage of spring migrants (e.g., yearling Chinook, steelhead, coho, and sockeye) was low all of the SMP sites this week. Subyearling Chinook dominated the collections at all the SMP dam sites this week. When compared to last week, subyearling Chinook passage decreased at the Snake River and Lower Columbia River dam sites. At the Upper Columbia site (RIS), subyearling Chinook passage this week was similar to last week.

Subyearling Chinook passage at Bonneville Dam (BON) decreased this week, when compared to the previous week. The daily average passage index for subyearling Chinook at BON this week was about 75,700 per day. Last week's daily average passage index was about 115,700 per day. Pacific lamprey macrophthalmia were encountered in only two of this week's samples at BON. On the morning of July 17<sup>th</sup>, temperatures in the BON sample tank exceeded 70°F, which triggered the high temperature sampling protocol. Under the high temperature sampling protocol, SMP sampling at BON is modified from a 24-hour sample every-day to a 24-hour sample every-other-day. Therefore, Friday, July 18<sup>th</sup> will be the first non-sample day at BON for 2014. This high temperature protocol will remain in place until the daily average temperature in the forebay falls below 69.5°F.

Subyearling Chinook passage at John Day Dam (JDA) decreased this week. This week's daily average passage index for subyearling Chinook was about 64,300 per day. Last week's daily average passage index for subyearling Chinook was about 104,300 per day. No pacific lamprey ammocoetes were encountered in this

week's samples but pacific lamprey macrophthalmia were present in four of this week's samples. The daily average collection for pacific lamprey macrophthalmia this week was about 130 per day, which is a decrease from last week's daily average collection of about 270 per day.

Sampling at McNary Dam (MCN) is every-other-day for the entire 2014 SMP season. Subyearling Chinook passage decreased this week when compared to the previous week. The daily average passage index for subyearling Chinook at MCN this week was about 191,000 per day. Last week's daily average passage index for subyearling Chinook was about 314,000. Pacific lamprey macrophthalmia were encountered nearly every day this week. The daily average collection for pacific lamprey macrophthalmia this week was about 1,400 per day, which is a decrease from last week's daily average collection of about 2,150 per day. Increases in sample mortality, coupled with high temperatures in the gatewells and juvenile fish facility triggered the implementation of the Warm Water Operations protocol this week, as specified in the 2014 Fish Passage Plan. Under this protocol, turbine units were shut down in a staggered priority, stopping every-other-unit starting with unit 2 and ascending as necessary to avoid temperature shocks within the juvenile collection channel.

This week's daily average passage index for subyearling Chinook at Lower Granite Dam (LGR) was about 3,900 per day, which is a decrease from last week's daily average passage index of about 5,400 per day. Only two pacific lamprey ammocoetes were sampled this week, both on July 11<sup>th</sup>. No macrophthalmia was sampled at LGR this week.

Passage of subyearling Chinook decreased at Little Goose (LGS) and Lower Monumental (LMN) dams this week, when compared to the previous week. This week's daily average passage index for subyearling Chinook at LGS was about 5,650 per day while that at LMN was about 2,150 per day. Last week's daily average passage indices for subyearling Chinook at these sites were nearly 6,200 per day at LGS and 2,300 at LMN. No pacific lamprey ammocoetes were encountered at LGS this week but pacific macrophthalmia were encountered at LGS on July 15<sup>th</sup> and LMN on July 14<sup>th</sup>.

Passage of subyearling Chinook at Rock Island Dam (RIS) this week remained similar to last week. This week's daily average passage index for subyearling Chinook was about 490 per day whereas that for last week was about 510 per day. So far this year, only pacific lamprey macrophthalmia have been collected at RIS. Six pacific lamprey macrophthalmia was encountered this week, three on July 11<sup>th</sup>, two on July 12<sup>th</sup>, and one on July 16<sup>th</sup>.

The Imnaha River Trap (IMN) is located at river kilometer seven and is operated by the Nez Perce Tribe. Due to the remote nature of the trap, the Nez Perce Tribe is only able to send collection data to the FPC periodically. Summer trapping operations began on June 22<sup>nd</sup>, which means that the Imnaha Trap is only operated on weekdays. To date, the FPC has received data through July 15<sup>th</sup>. Collections over the last 7 days of sampling have been relatively low, with yearling Chinook dominating the collections. The daily average collection for yearling Chinook during this period was about 9 per day. Steelhead collections during this period averaged two per day. Sampling for the 2014 out-migration season was terminated at the Imnaha River Trap (IMN) after the July 15<sup>th</sup> sample.

#### **Hatchery Release:**

**Snake River Zone:** The Snake River Zone encompasses the Snake River and its tributaries from its confluence with the Columbia River to Hells Canyon Dam. There were no new releases scheduled for this zone this week. In addition, no new releases are scheduled for this zone over the next two weeks.

**Mid-Columbia Zone:** The Mid-Columbia Zone encompasses the area of the Columbia River and its tributaries from McNary Dam to Chief Joseph Dam. There were no releases scheduled for this zone this week and no releases are scheduled for this zone over the next two weeks.

**Lower Columbia Zone:** The Lower Columbia Zone is defined as the Columbia River and its tributaries from Bonneville Dam to McNary Dam. There were no new releases scheduled for this zone this week. Approximately 2.1 million subyearling fall Chinook brights are scheduled to be released from Willard NFH into the Little White Salmon River later this month. This release was originally expected to occur at the

beginning of this month but has been delayed in order to allow time for the fish to get up to the desired release size. At this time, the exact release date is not known but is expected to be sometime between July 21<sup>st</sup> and July 31<sup>st</sup>. Marking information for these fish is also unknown at this time. There are no other releases scheduled for this zone over the next two weeks.

#### **Adult Passage**

Daily adult summer Chinook passage numbers at Bonneville Dam ranged between 881 and 1,469 in the last week. The 2014 summer Chinook count of 100,036 is about 1.2 times greater than the 2013 count and about 1.3 times greater than the 10-year average. The 2014 Bonneville Dam summer Chinook jack count of 21,893 is 84.7% of the 2013 count, while being 1.3 times greater than the 10-year average count. At McNary Dam 76,249 adult summer Chinook have been counted. The 2014 adult summer Chinook count at McNary Dam is about 1.15 times greater than the 2013 count and is about 1.4 times greater than the 10-year average. The 2014 McNary Dam summer Chinook jack count of 13,451 has 392 more fish than the 2013 count and is about 1.4 times greater than the 10-year average count. The 2014 adult summer Chinook count at Lower Granite Dam in the Snake River of 12,208 is about 1.7 times greater than the 2013 count, while being 88.1% of the 10 year average count. The 2014 Lower Granite summer Chinook jack count of 5,972 is about 93% of the 2013 count, while having 714 more fish than the 10 year average count.

The 2014 Bonneville Dam adult steelhead count of 50,043 is about 2.3 times greater than the 2013 count of 21,837 and has 2,212 more fish than the 10-year average count of 47,831. The 2014 Bonneville Dam adult wild steelhead count of 24,724 is about 2.3 times greater than the 2013 count of 10,523 and about 1.2 times greater than the 10-year average count of 20,941. Daily adult steelhead counts at Lower Granite Dam ranged from 51 to 122 adults per day last week. This year's Lower Granite steelhead count of 8,920 has 983 more fish than the 2013 count of 7,937, while being about 86.5% of the 10-year average count of 10,314. The 2014 Lower Granite Dam adult wild steelhead count of 4,114 has 711 more fish than the 2013 count of

3,403 and has 489 more fish than the 10-year average count of 3,625. At Willamette Falls, the 2014 count for steelhead was 24,117 as of July 13th. This year's steelhead count is about 1.4 times greater than the 2013 count of 16,626 and has 362 more fish than the 10-year average count of 23,755.

Daily adult sockeye passage numbers at Bonneville Dam ranged between 4,528 and 9,638 last week. The 2014 adult sockeye count at Bonneville Dam of 595,800 is about 3.3 times greater than the 2013 count and about 3.1 times greater than the 10-year average count. The 2014 McNary Dam adult sockeye count of 513,768 is about 4.1 times greater than the 2013 count of 125,122 and about 3.9 times greater than the 10 year average count of 131,530. The Lower Granite Dam 2014 adult sockeye count of 1,470 has 937 more fish the 2013 count of 533 and 964 more fish than the 10 year average of 506. As of July 17th at Bonneville Dam, the adult shad count was 2,598,192. This year's shad count is about 69.4% of the 2013 count of 3,739,388 and 93.8% of the 10 year average count of 2,769,127.

### *Wanapum Dam Update*

At Wanapum Dam a significant crack (65-feet long by 2-inches wide) was discovered in a spillway monolith (#4) on February 27, 2014. This discovery has led to an emergency drawdown of the Wanapum pool to an elevation range of 541–545 feet, which is over 20 feet below its typical forebay elevation. Preliminary results of an investigation by Grant PUD and its consultants has determined that the primary contributing factor to a fracture developing within the dam's spillway was a mathematical error during the pre-construction design of Wanapum Dam.

The drawdown of Wanapum pool had caused the adult fishways at Wanapum Dam to not be operational. The adult fishways exits had been approximately 10 feet above the forebay water level. Grant County has designed adult fishway retrofits that involve the use of weir boxes and chutes to deliver adult fish into the forebay of Wanapum Dam. On April 15, 2014, the weir and chute retrofit was operational at the left bank fishway. A weir and chute has also been installed at the right bank fishway at Wanapum and was operational on

April 26, 2014. Grant County PUD installed a spiral flume on the left bank fishway that reduces the elevation of the chute outflow from approximately 10 feet down to several feet. At the time of installing the spiral flume at the left bank fishway exit, Grant County also installed a ramp structure leading up to the weir and barriers to prevent jumping outside the structure. Grant PUD has also completed the installation of the spiral flume at the right bank fishway.

Visual observations of the exit retrofits have been promising. During Wanapum Dam site visits on May 7, May 21, June 4, June 18, and July 2, 2014, many fish have been seen passing the left bank fishway weir and chute. On July 2<sup>nd</sup>, 2014, over a several hour period, the left bank weir successfully passed well over a thousand fish (predominantly sockeye and Chinook). On July 2<sup>nd</sup>, 2014, a very large majority of the fish passed via left bank ladder; only two sockeye were seen passing the right bank ladder weir

As of July 14<sup>th</sup>, 2014 a total of 487,550 Sockeye and 58,738 adult summer Chinook had passed Priest Rapids Dam. As of the same date, 375,183 sockeye and 53,574 summer Chinook had passed Rock Island dam. Although, the difference in sockeye between the two projects is greater than 110,000, recent daily totals at Rock Island have been 26,000-34,000 sockeye per day.

The drawdown of Wanapum pool has also had a significant impact on the adult fishways at Rock Island Dam, operated by Chelan PUD. With the lower than normal tailrace levels, Chelan PUD has constructed extensions or denils at several ladder entrances. Chelan County PUD currently has all three denils in place, two at the right bank fishway and one of the left bank fishway.

### Hatchery Releases Next Two Weeks

#### Hatchery Release Summary

From: 7/4/2014 to 07/17/14

Agency	Hatchery	Species	Race	MigYr	NumRel	RelStart	RelEnd	RelSite	RelRiver

## Two-Week Summary of Passage Indices

\* See sampling comments <http://www.fpc.org/currentDaily/smpcomments.htm>

Smolt indices, clipped & unclipped or combined, are presented in the following order: yearling chinook (chinook 1's), subyearling chinook (chinook 0's), steelhead, coho, sockeye, and lamprey juveniles. Two classes of fish counts are shown in these tables:

Two classes of fish counts are shown in these tables:

Sample counts (Samp) are provided for juvenile lamprey at LGR. See note below for details †.

Collection counts (Coll), which account for sample rates but are not adjusted for flow;

Passage indices (INDEX), which are collection counts divided by the proportion of water passing through the sampled powerhouse.

Passage indices are not population estimates, but are used to adjust collection counts for daily fluctuations in the site's or project's operations.

The classes of counts presented in the report are defined below for each site. Most samples occur over a 24-hr period that spans two calendar days. In this report, the date shown corresponds with the sample end date.

Combined lamprey juvenile collection counts are provided for all sites. Combined lamprey juveniles is a combination of pacific lamprey ammocoetes, brook lamprey ammocoetes, unknown lamprey ammocoetes, pacific lamprey macrophthalmia, and unidentified lamprey species.

† In 2013 it was confirmed that juvenile lamprey can escape the sample tank at LGR which would lead to unreliable estimates of collection. Therefore, only sample counts are provided in this report.

### Definitions for Smolt Index Counts

WTB (Collection) = Salmon River Trap at Whitebird : Collection Counts

IMN (Collection) = Imnaha River Trap : Collection Counts

GRN (Collection) = Grande Ronde River Trap : Collection Counts

LEW (Collection) = Snake River Trap at Lewiston : Collection Counts

LGR (Index) = Lower Granite Dam Bypass Collection System : Passage Index Counts

Passage Index =  $\text{Collection Counts} / \{ \text{Powerhouse Flow} / (\text{Powerhouse Flow} + \text{Spill}) \}$

LGS (Index) = Little Goose Bypass Collection System : Passage Index Counts

Passage Index =  $\text{Collection Counts} / \{ \text{Powerhouse Flow} / (\text{Powerhouse Flow} + \text{Spill}) \}$

LMN (Index) = Lower Monumental Dam Bypass Collection System : Passage Index Counts

Passage Index =  $\text{Collection Counts} / \{ \text{Powerhouse Flow} / (\text{Powerhouse Flow} + \text{Spill}) \}$

RIS (Index) = Rock Island Dam Second Powerhouse Bypass Trap : Passage Index Counts

Passage Index =  $\text{Collection Counts} / \{ \text{Powerhouse 2 Flow} / (\text{Powerhouse 1 \& 2 Flow} + \text{Spill}) \}$

MCN (Index) = McNary Dam Bypass Collection System : Passage Index Counts

Passage Index =  $\text{Collection Counts} / \{ \text{Powerhouse Flow} / (\text{Powerhouse Flow} + \text{Spill}) \}$

JDA (Index) = John Day Dam Bypass Collection System : Passage Index Counts

Passage Index =  $\text{Collection Counts} / \{ \text{Powerhouse Flow} / (\text{Powerhouse Flow} + \text{Spill}) \}$

BO2 (Index) = Bonneville Dam Second Powerhouse Bypass Collection System : Passage Index Counts

Passage Index =  $\text{Collection Counts} / \{ \text{Powerhouse 2 Flow} / (\text{Powerhouse 1 \& 2 Flow} + \text{Spill}) \}$

JDA and BO2 data collected for the FPC by Pacific States Marine Fisheries Commission.

RIS data collected for the FPC by Chelan Co. PUD.

LGR, LMN, and MCN data collected for the FPC by Washington Dept. of Fish and Wildlife.

LGS and GRN data collected for the FPC by Oregon Dept. of Fish and Wildlife.

IMN data collected for the FPC by the Nez Perce Tribe.

Fall (post SMP season) trapping at the Imnaha River Fish Trap (IMN) is funded by the Lower Snake River Compensation Program (LSRCP)

WTB and LEW data collected for the FPC by Idaho Dept. of Fish and Game.

PRD does not post wild steelhead numbers.  
 These numbers were collected from USACE, Grant PUD, Douglas PUD, Chelan PUD, ODFW and DART.  
 Wild steelhead numbers are included in the total. Wild Steelhead are defined as unclipped fish.  
 Historic counts (pre-1996) were obtained from CRITFC and compiled by the FPC.  
 Historic counts 1997 to present were obtained from the Corps of Engineers.
