Weekly Report #14 - 22

August 15, 2014

847 NE 19th Ave., Suite 250
Portland, OR 97232
phone: (503) 833-3900
fax: (503) 232-1259

Summary of Events

Water Supply

Precipitation throughout the Columbia Basin has varied between 27% and 260% of average at individual sub-basins over August. Precipitation above The Dalles has been 108% of average over August. Over the 2014 water year, precipitation has ranged between 77% and 96% of average.

Table 1. Summary of July precipitation and cumulative October through August 13, 2014, precipitation with respect to average (1971–2000), at select locations within the Columbia and Snake River Basins.

Location	Water Year 2014 August 1–13, 2014		Water Year 2014 October 1, 2013 to August 13, 2014	
	Observed (inches)	% Average	Observed (inches)	% Average
Columbia above Coulee	0.33	34	31.9	90
Snow River above Ice Harbor	0.94	240	17.1	81
Columbia above The Dalles	0.63	108	21.6	83
Kootenai	0.34	31	33.5	92
Clark Fork	0.52	76	20.6	79
Flathead	0.21	27	32.5	96
Pend Oreille River Basin above Waneta Dam	0.35	47	26.9	87
Salmon River Basin	1.17	207	21.0	77
Upper Snake Tributaries	1.51	260	23.1	91
Clearwater	0.32	50	34.3	88
Willamette River above Portland	0.13	27	51.9	83

Grand Coulee Reservoir is at 1285.1 feet (8-14-14) and has drafted 2.2 feet over the last week (4.9 feet from full). Outflows at Grand Coulee have ranged between 105.9 and 127.0 Kcfs over the last week. The end of August draft limit at Grand Coulee is 1280 feet this year,

with an additional 1.0 foot of draft by the end of August as part of the Lake Roosevelt Incremental Storage Release Program.

The Libby Reservoir is currently at elevation 2453.5 feet (8-14-14) and has refilled 0.7 Kcfs (5.5 feet from full). Daily average outflows at Libby Dam have been 9.0 Kcfs over the last week.

Hungry Horse is currently at an elevation of 3557.0 feet (8-14-14) and has drafted 1.0 feet over the previous week (3.0 feet from full). Daily average outflows at Hungry Horse have ranged between 3.05 and 3.08 Kcfs over the last week.

Dworshak is currently at an elevation of 1556.6 feet (8-14-14) and has drafted 8.6 feet over the previous week. Daily average outflows at Dworshak have ranged between 9.8 and 12.1 Kcfs over the last week.

The Brownlee Reservoir was at an elevation of 2057.8 feet on August 14, 2014, and has drafted 1 foot last week. Inflows to Brownlee Dam ranged between 8.33 and 10.18 Kcfs over the period of August 8 to August 14.

The Summer Biological Opinion flow period began on June 21st in the lower Snake River (Lower Granite). According to the June Final Water Supply Forecast (June 6, 2014), the flow objective this summer is 52 Kcfs at Lower Granite. Flows at Lower Granite Dam have averaged 27.7 Kcfs over the past week and 45.6 since the beginning of the summer flow period.

The flow objective at McNary over the summer period (July 1st to August 31st) is 200 Kcfs. Flows at McNary Dam have averaged 169.8 Kcfs over the past week and 219.5 Kcfs since the beginning of the summer flow period.

Spill

The Snake River projects transitioned to the summer spill program on June 21st. At the lower Columbia projects summer spill was initiated on June 16th. Summer spill operations throughout the FCRPS will continue until August 31st.

Earlier in the week, spill at Lower Granite Dam was less than 18 Kcfs as a result of low flows and the operation of one turbine unit. Beginning on April 11th, operations at the project were modified to replace neutral bushings on Transformer 1. Between August 11 and 17, T1 units 1–4 are out of service from 6 a.m. through 5 p.m., while T2 units 5 and 6 return to service every other day for 24 hours. The result of these operations are that on some days spill exceeds the 18 Kcfs, while on others spill is less than 18 Kcfs. Spill at Little Goose Dam transitioned to a flat spill operation due to decreased river flows. A flat spill specified in the FOP as 7–11 Kcfs (dependent on flow) is necessary to achieve the prescribed spill level downstream at Lower Monumental Dam and to maintain minimum operating pool operations. At Lower Monumental Dam, daily average spill was often less than the 17 Kcfs specified in the Fish Operations Plan due to low flow and powerhouse minimum operation requirements. At Ice Harbor spill is occurring as river flow in excess of that needed for the operation of one turbine unit.

Project	Spill Level Day/Night
Lower Granite	18 Kcfs/18 Kcfs
Little Goose	30%/30%
Lower Monumental	17 Kcfs/17 Kcfs
Ice Harbor	45 Kcfs/Gas Cap

At the Middle Columbia River projects, McNary Dam spilled 50% of daily average flow. At John Day Dam the 30% spill level is in effect. Spill at The Dalles Dam averaged 40% of total daily flow. Bonneville Dam spilled an alternating 85 Kcfs/121 Kcfs and 95 Kcfs/95 Kcfs.

Project	Spill Level Day/Night
McNary	50%/50%
John Day	30%/30%
The Dalles	40%/40%
Bonneville	85 Kcfs/121 Kcfs and 95 Kcfs/95 Kcfs

New in 2014 is a change in the way the U.S. Army Corps of Engineers will assess whether a project is in compliance with the total dissolved gas variances in place. The States of Oregon and Washington use different methodologies to estimate the 12-hour average TDG. For Oregon, the 12-hour average is based on the 12 highest hourly TDG measurements in a single calendar day (not necessarily consecutive). For Washington, the 12-hour average is based on 12-hour rolling averages. The highest of the rolling averages is what is reported as the 12-hour average for a given day. In 2014, the location of a TDG monitor and/or type of monitor will dictate which of these methodologies is used for compliance monitoring. The Washington methodology will apply to all the lower Snake River projects, as well as the lower Columbia River forebay monitors (since Oregon does not have a forebay TDG requirement). On any given day the compliance of the tailrace monitors at the lower Columbia River projects will be determined using either the Washington or Oregon methodology, whichever is the most restrictive, and spill may be decreased if needed.

Monitoring for signs of gas bubble trauma (GBT) occurred at Bonneville and Rock Island dams over the past week. No fish were observed with signs of GBT. The action criteria for GBT are 15% of total fish with any signs of GBT in the fins, or 5% with severe signs (Rank 3 or greater).

Smolt Monitoring

Smolt monitoring is ongoing at all seven SMP dams (BON, JDA, MCN, RIS, LMN, LGS, LGR). Sampling at the SMP traps has been completed for the 2014 out-migration season.

Subyearling Chinook dominated the collections at all the SMP dam sites this week. When compared to last week, subyearling Chinook passage increased at BON, LGR, and LGS and decreased at RIS and MCN this week. Subyearling Chinook passage this week remained the same at LMN. Due to the high temperature protocol at JDA, comparisons in passage are not possible.

High temperature sampling protocols were in effect this week at Bonneville Dam (BON). Under these high temperature sampling protocols, index

sampling occurred every other day. All fish were bypassed on non-sample days. The high temperature protocol will remain in place until the daily average temperature in the forebay falls below 69.5°F.

Subyearling Chinook passage at BON increased this week, when compared to the previous week. The daily average passage index for subyearling Chinook at BON this week was about 16,800 per day. Last week's daily average passage index was about 11,200 per day. No Pacific lamprey were encountered in this week's samples at BON.

High temperature sampling protocols were in effect this week at John Day Dam (JDA). Under these high temperature sampling protocols, the SMP crew at JDA samples only twice a week (Monday and Thursday), for condition only. It is important to note that this type of sampling results in bias collection estimates, as sampling is not 24-hours. Therefore, it is not appropriate to compare passage index estimates during this period to those from previous weeks. Subyearling Chinook dominated the bypass samples at JDA this week. No Pacific lamprey juveniles were encountered in this week's samples at JDA. The high temperature sampling protocols will continue until the daily average temperature in the forebay falls below 69.5°F.

The high temperature sampling protocols were in effect this week at McNary Dam (MCN). Under the high temperature protocols, sampling at MCN remains every-other-day except the target sample size for handling is reduced (from between 300–500 to approximately 100 fish). As with BON and JDA, this high temperature protocol will remain until the daily average temperature in the forebay falls below 69.5°F. Subyearling Chinook passage decreased this week when compared to the previous week. The daily average passage index for subyearling Chinook at MCN this week was about 30,800 per day. Last week's daily average passage index for subyearling Chinook was about 63,900. Pacific lamprey macrophthalmia were encountered in two of the three samples this week. The daily average collection for Pacific lamprey macrophthalmia this week was about 100 per day, which is a decrease from last week's daily average collection of about 175 per day.

This week's daily average passage index for subyearling Chinook at Lower Granite Dam (LGR)

was nearly 2,100 per day, which is an increase from last week's daily average passage index of about 1,400 per day. Only one Pacific lamprey macrophthalmia was sampled this week, on August 11th.

Compared to last week, passage of subyearling Chinook increased at Little Goose (LGS) but did not change at Lower Monumental (LMN). This week's daily average passage index for subyearling Chinook at LGS was about 3,200 per day while that at LMN was about 400 per day. Last week's daily average passage indices for subyearling Chinook at these sites were nearly about 2,500 per day at LGS and 480 at LMN. No Pacific lamprey ammocoetes were encountered this week at either LGS or LMN. Pacific lamprey macrophthalmia were encountered in six of this week's samples at LGS but only two at LMN. This week's daily average collection for Pacific lamprey macrophthalmia at LGS was 10 per day.

Passage of subyearling Chinook at Rock Island Dam (RIS) decreased again this week, when compared to last week. This week's daily average passage index for subyearling Chinook was about 160 per day whereas that for last week was about 260 per day. So far this year, only Pacific lamprey macrophthalmia have been collected at RIS. RIS collected its first Pacific lamprey ammocoete of the 2014 season on August 14th. A total of 21 ammocoetes were in the August 14th sample. Pacific lamprey macrophthalmia were encountered in six of this week's samples, with a daily average collection of three per day.

Hatchery Release

Snake River Zone: The Snake River Zone encompasses the Snake River and its tributaries from its confluence with the Columbia River to Hells Canyon Dam. There were no new releases scheduled for this zone this week. In addition, no new releases are scheduled for this zone over the next 2 weeks.

Mid-Columbia Zone: The Mid-Columbia Zone encompasses the area of the Columbia River and its tributaries from McNary Dam to Chief Joseph Dam. There were no releases scheduled for this zone this week and no releases are scheduled for this zone over the next 2 weeks.

Lower Columbia Zone: The Lower Columbia Zone is defined as the Columbia River and its tributaries from Bonneville Dam to McNary Dam. There were no releases scheduled for this zone this week. There are no other releases scheduled for this zone over the next 2 weeks.

Adult Passage

Fall Chinook began to pass Bonneville Dam on August 1st. The adult fall Chinook count of 8,709 is about 52% of the 2013 count of 16,714 and about 110% of the 10-year average count of 7,912. The 2014 Bonneville Dam fall Chinook jack count of 3,044 has 309 more fish than the 2013 count of 2735 and 1,556 more fish than the 10-year average count of 1488. The 2014 adult summer Chinook count of 14,567 at Lower Granite Dam in the Snake River is about 1.8 times greater than the 2013 count, while being about 96% of the 10-year average count. The 2014 Lower Granite summer Chinook jack count of 7,083 is about 94% of the 2013 count, while being about 1.2 times greater than the 10-year average count.

The 2014 Bonneville Dam adult steelhead count of 165,235 is about 1.2 times greater than the 2013 count of 139,581, while being about 91% of the 10-year average count of 181,908. The 2014 Bonneville Dam adult wild steelhead count of 79,989 is about 1.16 times greater than the 2013 count of 68,675 and about 1.1 times greater than the 10-year average count of 70,085. Daily adult steelhead counts at Lower Granite Dam ranged from 118 to 256 adults per day last week. This year's Lower Granite steelhead count of 14,186 is about 1.4 times greater than the 2013 count of 10,108, while having 753 fewer fish than the 10-year average count of 14,939. The 2014 Lower Granite Dam adult wild steelhead count of 7,050 is about 1.5 times greater than the 2013 count of 4,715 and is about 1.3 times greater than the 10-year average count of 5,541. At Willamette Falls, the 2014 count for steelhead was 26,389 as of August 13th. This year's steelhead count is about 1.5 times greater than the 2013 count of 17,378 and has 1,609 more fish than the 10-year average count of 24,780.

Daily adult sockeye passage numbers at Bonneville Dam ranged between 8 and 70 last week.

The 2014 adult sockeye count at Bonneville Dam of 614,075 is about 3.3 times greater than the 2013 count of 185,452 and about 3.2 times greater than the 10-year average count of 192,193. Two of the major spawning sites for sockeye in the Upper Columbia River zone are Lake Wenatchee and Lake Osoyoos (Okanogan basin). The 2014 McNary Dam adult sockeye count of 545,845 is about 4.1 times greater than the 2013 count of 134,123 and about 4 times greater than the 10-year average count of 135,976. The Lower Granite Dam 2014 adult sockeye count of 2,707 is about 3.7 times greater than the 2013 count of 731 and about 4 times greater than the 10-year average count of 680.

One hundred and eighty-six adult coho have crossed Bonneville Dam so far this year. As of August 14th at Bonneville Dam, the adult shad count was 2,603,116. This year's shad count is about 69.4% of the 2013 count of 3,750,807 and 93.6% of the 10-year average count of 2,782,350.

Two-Week Summary of Passage Indices

* See sampling comments <http://www.fpc.org/currentDaily/smpcomments.htm>

Smolt indices, clipped & unclipped or combined, are presented in the following order: yearling chinook (chinook 1's,) subyearling chinook (chinook 0's), steelhead, coho, sockeye, and lamprey juveniles. Two classes of fish counts are shown in these tables:

Two classes of fish counts are shown in these tables:

Sample counts (Samp) are provided for juvenile lamprey at LGR. See note below for details †.

Collection counts (Coll), which account for sample rates but are not adjusted for flow;

Passage indices (INDEX), which are collection counts divided by the proportion of water passing through the sampled powerhouse.

Passage indices are not population estimates, but are used to adjust collection counts for daily fluctuations in the site's or project's operations.

The classes of counts presented in the report are defined below for each site. Most samples occur over a 24-hr period that spans two calendar days. In this report, the date shown corresponds with the sample end date.

Combined lamprey juvenile collection counts are provided for all sites. Combined lamprey juveniles is a combination of pacific lamprey ammocoetes, brook lamprey ammocoetes, unknown lamprey ammocoetes, pacific lamprey macrophthalmia, and unidentified lamprey species.

† In 2013 it was confirmed that juvenile lamprey can escape the sample tank at LGR which would lead to unreliable estimates of collection. Therefore, only sample counts are provided in this report.

Definitions for Smolt Index Counts

WTB (Collection) = Salmon River Trap at Whitebird : Collection Counts

IMN (Collection) = Imnaha River Trap : Collection Counts

GRN (Collection) = Grande Ronde River Trap : Collection Counts

LEW (Collection) = Snake River Trap at Lewiston : Collection Counts

LGR (Index) = Lower Granite Dam Bypass Collection System : Passage Index Counts

Passage Index = Collection Counts / {Powerhouse Flow / (Powerhouse Flow + Spill)}

LGS (Index) = Little Goose Bypass Collection System : Passage Index Counts

Passage Index = Collection Counts / {Powerhouse Flow / (Powerhouse Flow + Spill)}

LMN (Index) = Lower Monumental Dam Bypass Collection System : Passage Index Counts

Passage Index = Collection Counts / {Powerhouse Flow / (Powerhouse Flow + Spill)}

RIS (Index) = Rock Island Dam Second Powerhouse Bypass Trap : Passage Index Counts

Passage Index = Collection Counts / {Powerhouse 2 Flow / (Powerhouse 1 & 2 Flow + Spill)}

MCN (Index) = McNary Dam Bypass Collection System : Passage Index Counts

Passage Index = Collection Counts / {Powerhouse Flow / (Powerhouse Flow + Spill)}

JDA (Index) = John Day Dam Bypass Collection System : Passage Index Counts

Passage Index = Collection Counts / {Powerhouse Flow / (Powerhouse Flow + Spill)}

BO2 (Index) = Bonneville Dam Second Powerhouse Bypass Collection System : Passage Index Counts

Passage Index = Collection Counts / {Powerhouse 2 Flow / (Powerhouse 1 & 2 Flow + Spill)}

JDA and BO2 data collected for the FPC by Pacific States Marine Fisheries Commission.

RIS data collected for the FPC by Chelan Co. PUD.

LGR, LMN, and MCN data collected for the FPC by Washington Dept. of Fish and Wildlife.

LGS and GRN data collected for the FPC by Oregon Dept. of Fish and Wildlife.

IMN data collected for the FPC by the Nez Perce Tribe.

Fall (post SMP season) trapping at the Imnaha River Fish Trap (IMN) is funded by the Lower Snake River Compensation Program (LSRCP)

WTB and LEW data collected for the FPC by Idaho Dept. of Fish and Game.

PRD does not post wild steelhead numbers.
 These numbers were collected from USACE, Grant PUD, Douglas PUD, Chelan PUD, ODFW and DART.
 Wild steelhead numbers are included in the total. Wild Steelhead are defined as unclipped fish.
 Historic counts (pre-1996) were obtained from CRITFC and compiled by the FPC.
 Historic counts 1997 to present were obtained from the Corps of Engineers.
