

Fish Passage Center

Weekly Report #16–27

September 23, 2016

Starting September 9, the weekly reports will be published every other week; the next report will be October 7.

Summary of Events

Water Supply

Precipitation throughout the Columbia Basin has varied between 88% and 130% of average at individual sub-basins over September. Precipitation above The Dalles has been 106% of average over early September. Over the 2016 water year, precipitation has ranged between 82% and 104% of average.

Table 1. Summary of September precipitation and cumulative October through September 21st precipitation with respect to average (1981–2010), at select locations within the Columbia and Snake River Basins.

Location	Water Year 2016 September 1–7, 2016		Water Year 2016 October 1, 2015 to September 21, 2016	
	Observed (inches)	% Average	Observed (inches)	% Average
Columbia above Coulee	1.82	124	36.3	97
SNAKE RIVER above Ice Harbor	0.74	104	20.0	89
Columbia above The Dalles	0.99	106	25.9	95
Kootenai	2.01	130	36.2	97
Clark Fork	1.46	119	23.6	85
Flathead	1.76	109	37.2	103
Pend Oreille River Basin above Waneta Dam	1.50	111	31.1	95
Salmon River Basin	1.15	124	25.5	88
Upper Snake Tributaries	1.25	112	21.7	82
Clearwater	1.15	88	38.6	95
Willamette River above Portland	1.29	89	68.3	104

Grand Coulee Reservoir is at 1,281.6 feet (9-22-16) and refilled 3.5 feet over the last two weeks. Outflows at Grand Coulee have ranged between 53.1 and 84.3 Kcfs over the last two weeks.

The Libby Reservoir is currently at elevation 2,445.37 feet (9-22-16) and has drafted 0.83 feet over the previous two weeks. Daily average outflows at Libby Dam have been 6.5 Kcfs over the last two weeks.

Hungry Horse is currently at an elevation of 3,551.0 feet (9-22-16) and has drafted 1.8 feet over the last two weeks. Outflows at Hungry Horse have been 2.0-2.2 Kcfs over the last two weeks.

Dworshak is currently at an elevation of 1,519.8 feet (9-22-16) and has drafted 8.2 feet over the last two weeks. Dworshak outflows over the last two weeks have been 1.6 to 6.4 Kcfs.

The Brownlee Reservoir was at an elevation of 2,051 feet on September 21st, 2016, and has remained steady over the last two weeks. Outflows at Hells Canyon have ranged between 9.0 and 11.2 Kcfs over the last two weeks.

The Summer Biological Opinion flow period began on June 21st and ended August 31st with a flow objective of 50.4 Kcfs at Lower Granite. Over the Summer Flow Period, flows at Lower Granite Dam averaged 31.0 Kcfs

The Summer Biological Opinion Flow Objective was 200 Kcfs at McNary Dam (began July 1st and ended August 31st). Over the Summer Flow Period, flows at McNary averaged 148.9 Kcfs.

Smolt Monitoring

Smolt Monitoring Program (SMP) sampling this week occurred at the following SMP bypass facilities: Bonneville Dam, McNary Dam, Little Goose Dam, and Lower Granite Dam. Sampling at Rock Island Dam and John Day Dam ended after the sample on August 31st and September 15th, respectively.

Subyearling Chinook were the only salmonids encountered in this week's samples at BON. This week's daily average passage index for subyearling Chinook at BON was about 20 per day, which is a decrease over the previous week's daily average passage index of nearly 40 fish per day. No lamprey juveniles were encountered at BON this week.

To date, the FPC only has data for three of this week's four samples at McNary Dam, as data from the sample on Sept. 20th have not been reported. This week's samples at MCN were dominated by subyearling Chinook, with a daily average passage index of about 7 per day. This is similar to the daily average passage index from the previous week, which was about 9 subyearling Chinook per day. No spring migrants were encountered at MCN this week. Pacific lamprey macrophthalmia were encountered in two of the three samples from this week (Sept. 16th and Sept. 22nd).

This week's samples at Lower Granite Dam (LGR) were again dominated by subyearling Chinook, with a daily average passage index of about 40 per day. This is a decrease over the previous week's daily average passage index of about 80 subyearling Chinook per day. Other juvenile salmonids that were encountered in this week's samples included yearling Chinook, sockeye, and steelhead. However, sample counts for these three species were very low. Finally, one Pacific lamprey ammocoete was encountered this week (Sept. 18th) while macrophthalmia were encountered every day this week. This week's daily average sample count for Pacific lamprey macrophthalmia at LGR was 18 per day.

Subyearling Chinook dominated this week's collections at Little Goose Dam (LGS). This week's daily average passage index for subyearling Chinook at LGS was about 380 per day, which is an increase over the previous week's daily average passage index of about 270. No spring migrants were encountered in this week's samples at LGS. Finally, Pacific macrophthalmia

were encountered every day this week, with a daily average collection of 11 fish per day. No Pacific ammocoetes were encountered at LGS this week.

This week's samples at Lower Monumental Dam (LMN) were again dominated by subyearling Chinook, with a daily average passage index of only 8 per day. This is an increase over the previous week's daily average passage index of about 15 per day. No spring migrants were encountered in this week's samples at LMN. Finally, one Pacific lamprey ammocoete was encountered this week (Sept. 22nd) while one macrophthalmia was encountered in each of three samples this week (Sept. 16th, 17th, and 20th).

Hatchery Release

Snake River Zone: The Snake River Zone encompasses the Snake River and its tributaries from its confluence with the Columbia River to Hells Canyon Dam. No new releases were scheduled for this zone this week. Furthermore, no releases are scheduled for this zone over the next two weeks.

Mid-Columbia Zone: The Mid-Columbia Zone encompasses the area of the Columbia River and its tributaries from McNary Dam to Chief Joseph Dam. No new releases were scheduled for this zone this week and no new releases are scheduled over the next two weeks.

Lower Columbia Zone: The Lower Columbia Zone is defined as the Columbia River and its tributaries from Bonneville Dam to McNary Dam. No new releases were scheduled for this zone this week and no new releases are scheduled over the next two weeks.

Adult Passage

The adult fall Chinook count of 394,540 is about 54% of the 2015 count of 730,639 and about 95.5% of the 10-year average count of 412,939. The 2016 Bonneville Dam fall Chinook jack count of 45,788 is about 81.2% of the 2015 count of 56,348 and 74.6% of the 10-year average count of 61,369. The 2016 adult fall Chinook count of 31,454 at Ice Harbor Dam in the Snake River is about 66.7% of the 2015 count but 1.1 times the greater than the 10-year average count of 28,322. The 2016 Lower Granite fall Chinook adult count of 26,079 is about 69.5% of the 2015 count but 1.3 times greater than the 10-year average count of 20,451.

The 2016 Bonneville Dam adult steelhead count of 160,405 is about 66.8% of the 2015 count of 240,071 and about 49.9% of the 10-year average count of 321,474. The 2016 Bonneville Dam adult wild steelhead count of 45,658 is about 51.4% of the 2015 count of 88,896 and about 42.5% of the 10-year average count of 107,347. Daily adult steelhead counts at Lower Granite Dam ranged from 1,176 to 2,351 adults per day last week. This year's Lower Granite steelhead count of 28,318 is about 57.5% of the 2015 count of 49,269 and 42.7% of the 10-year average count of 66,347. The 2016 Lower Granite Dam adult wild steelhead count of 8,900 is 54.8% of the 2015 count of 16,252 and about 45.4% of the 10-year average count of 19,620. At Willamette Falls, the 2016 count for steelhead was 26,306 as of September 21st. This year's steelhead count is about 3.4 times greater than the 2015 count of 7,848 and about 1.2 times greater than the 10-year average count of 22,390.

As of September 21st, the cumulative adult coho count at Bonneville Dam is 26,144, which is about 1.2 times greater than the 2015 count but only 39.3% of the 10-year average count of 66,503.

Two-Week Summary of Passage Indices

* See sampling comments <http://www.fpc.org/currentDaily/smpcomments.htm>

Smolt indices, clipped & unclipped or combined, are presented in the following order: yearling chinook (chinook 1's), subyearling chinook (chinook 0's), steelhead, coho, sockeye, and lamprey juveniles.

Two classes of fish counts are shown in these tables:

Sample counts (Samp) are provided for juvenile lamprey at LGR. See note below for details †.

Collection counts (Coll), which account for sample rates but are not adjusted for flow;

Passage indices (INDEX), which are collection counts divided by the proportion of water passing through the sampled powerhouse.

Passage indices are not population estimates, but are used to adjust collection counts for daily fluctuations in the site's or project's operations.

The classes of counts presented in the report are defined below for each site. Most samples occur over a 24-hr period that spans two calendar days. In this report, the date shown corresponds with the sample end date.

Combined lamprey juvenile collection counts are provided for all sites. Combined lamprey juveniles is a combination of pacific lamprey ammocoetes, brook lamprey ammocoetes, unknown lamprey ammocoetes, pacific lamprey macrophthalmia, and unidentified lamprey species.

† In 2013 it was confirmed that juvenile lamprey can escape the sample tank at LGR which would lead to unreliable estimates of collection. Therefore, only sample counts are provided in this report.

Definitions for Smolt Index Counts

WTB (Collection) = Salmon River Trap at Whitebird : Collection Counts

IMN (Collection) = Imnaha River Trap : Collection Counts

GRN (Collection) = Grande Ronde River Trap : Collection Counts

LEW (Collection) = Snake River Trap at Lewiston : Collection Counts

LGR (Index) = Lower Granite Dam Bypass Collection System : Passage Index Counts

Passage Index = Collection Counts / {Powerhouse Flow / (Powerhouse Flow + Spill)}

LGS (Index) = Little Goose Bypass Collection System : Passage Index Counts

Passage Index = Collection Counts / {Powerhouse Flow / (Powerhouse Flow + Spill)}

LMN (Index) = Lower Monumental Dam Bypass Collection System : Passage Index Counts

Passage Index = Collection Counts / {Powerhouse Flow / (Powerhouse Flow + Spill)}

RIS (Index) = Rock Island Dam Second Powerhouse Bypass Trap : Passage Index Counts

Passage Index = Collection Counts / {Powerhouse 2 Flow / (Powerhouse 1 & 2 Flow + Spill)}

MCN (Index) = McNary Dam Bypass Collection System : Passage Index Counts

Passage Index = Collection Counts / {Powerhouse Flow / (Powerhouse Flow + Spill)}

JDA (Index) = John Day Dam Bypass Collection System : Passage Index Counts

Passage Index = Collection Counts / {Powerhouse Flow / (Powerhouse Flow + Spill)}

BO2 (Index) = Bonneville Dam Second Powerhouse Bypass Collection System : Passage Index Counts

Passage Index = Collection Counts / {Powerhouse 2 Flow / (Powerhouse 1 & 2 Flow + Spill)}

JDA and BO2 data collected for the FPC by Pacific States Marine Fisheries Commission.

RIS data collected for the FPC by Chelan Co. PUD.

LGR, LMN, and MCN data collected for the FPC by Washington Dept. of Fish and Wildlife.

LGS and GRN data collected for the FPC by Oregon Dept. of Fish and Wildlife.

IMN data collected for the FPC by the Nez Perce Tribe.

Fall (post SMP season) trapping at the Imnaha River Fish Trap (IMN) is funded by the Lower Snake River Compensation Program (LSRCP)

WTB and LEW data collected for the FPC by Idaho Dept. of Fish and Game.

PRD does not post wild steelhead numbers.
 These numbers were collected from USACE, Grant PUD, Douglas PUD, Chelan PUD, ODFW and DART.
 Wild steelhead numbers are included in the total. Wild Steelhead are defined as unclipped fish.
 Historic counts (pre-1996) were obtained from CRITFC and compiled by the FPC.
 Historic counts 1997 to present were obtained from the Corps of Engineers.
